proceedings of the Open Meetings of the Working Groups on Physical Sciences of the 20th Plenary Meeting of COSPAR, held in Tel Aviv, Israel, on June 7-18, 1977. The book focuses on remote sensing of the earth's environment, atmospheric response to solar and geomagnetic activity, ionosphere, magnetosphere, moon and planets, and cosmic dust. The selection first reviews the development of space research, including sensing the earth from spacecraft; resources, weather, and climate; solar wind and its interactions; galactic system; and the moon and planets. The book

also takes a look at the depression of remotely sensed surface temperatures by a dust-laden tropical atmosphere and forest fire fuel mapping from LANDSAT. The text describes the effects of UV variability on stratospheric thermal structure and trace constituents; estimates of the stratospheric temperature variation in response to changes of the flux of solar UV radiation; and electrical conductivity measurements in the stratosphere using balloon and parachute-born blunt probes. The publication also discusses the composition of the mid-latitude winter

intelligence; and biochemical mechanism of the visual-light-flash phenomena. The selection first discusses the Viking Lander biology experiments on Mars. The experiments returned detailed picture of the Martian soil surface chemistry. The text also takes a look at a preliminary search for narrowband signals at microwave frequencies; observational program options and system requirements for the search of extraterrestrial intelligence; and public health considerations related to a Mars surface sample return mission. The book reviews planetary protection guidelines for outer planet missions, including Viking clean room technology, efficacy of clean
