This practical resource presents the best ideas and practices in the field of gifted education. From planning a sound gifted and talented program to the evaluation of a program, this leading text explores contemporary program models, problems of minority, disabled, and female gifted students. Chapters on creativity and teaching thinking skills--two concepts central to gifted education--help the reader understand creative students, creative processes, and how to foster high levels of creative thinking (Chs. 10 & 11). ("Education of the Gifted and Talented, 4/e") is current and accurate. Couldn't ask for a better text." Michael F. Shaughnessy, "Eastern New Mexico University"
"The authors have mastered the fine art (of) writing in an interesting and intellectually challenging manner: no small feat...I love this book!" Amy P. Dietrich, "The University of Memphis"
"The comprehensiveness of the coverage for an introductory text is a major strength." Sally M. Reis, "University of Connecticut"

Focuses on the use of imagery in sports. This work features contributors who are experts in their area, and together they have assembled the most relevant data produced by research and offer practical suggestions.

Digital Imagery in a Semester introduces graphic design students to the three Adobe programs Photoshop, Illustrator and InDesign. Through step-by-step tutorials featuring screenshots students learn the basics of creating digital artwork such as vector illustrations and photo collages. The book also introduces the rules of copyrighted material on the Web and using royalty-free images. In addition to the book, readers can log in to view video tutorials at: inasemester.com

This is the first book to systematically describe the range of approaches used in music imagery and Guided Imagery and Music across the lifespan, from young children through to palliative care with older people. Covering a broad spectrum of client populations and settings, international contributors present various adaptations of the Bonny Method of Guided Imagery (including hospitals, schools, and the wider community), client symptomology, and the increasing use of more contemporary music. Each chapter presents a different model and includes background information on the client group, the type of approach, elements of approach (including length of the session, choice of music, verbal interventions during the music, and intention. A nomenclature for the range of approaches is also included. This information will be a valued guide for both practitioners and students of Guided Imagery and Music and receptive methods of music therapy.

The fourth edition of this well-known text continues the mission of its predecessors – to help teachers link creativity research and theory to the everyday activities of classroom teaching. Part I includes information on models and theories of creativity, characteristics of creative people, and talent development. Part II includes strategies explicitly designed to teach instruction, and to organize basic classroom activities (grouping, lesson planning, assessment, motivation and classroom organization) in ways that support students' creativity.

Established in 1982 as the leading reference on electroencephalography, Drs. Niedermeyer's and Lopes da Silva's text is now in its thoroughly updated Fifth Edition. An international group of experts provides comprehensive coverage of the neurophysiologic and technical aspects of EEG, evoked potentials, and magnetoencephalography, as well as the clinical applications and older adults. This edition includes digital EEG and advances in areas such as neurocognition. Three new chapters cover the topics of Ultra-Fast EEG Frequencies, Ultra-Slow Activity, and Cortico-Muscular Coherence. Hundreds of EEG tracings and other illustrations complement the text.

The methods outlined in this guide offer teachers a variety of ways to stimulate interest, enhance concentration, increase understanding, and improve memory in their students. Chapter 1 discusses the LEARN (Learning Efficiently And Remembering Mnemonics) system, a set of strategies that help students use a variety of processing styles to a greater advantage, and the 4M and VIP system, a set of strategies that incorporate Mnemonics, Metaphors, Mind maps, and Music; and Visual strategies, Imagery, and Positive suggestions. Chapter 2 provides an overview of visualization, its role in learning, and how it is used in these systems. Chapter 3 discusses Memory Foundations for Multiplication (MFM), a multiplication system using mnemonics. Chapter 4 presents finger multiplication systems, and chapter 5 discusses several different patterns and strategies to help students with spelling. Chapter 6 presents reading, science, and social studies mnemonics. Chapter 7 discusses strategies for developing and using metaphors and other associative techniques. Chapter 8 covers an organizational technique called mind mapping, and chapter 9 presents ideas and teaching suggestions for using music to enhance learning. Visual strategies are discussed in chapter 10, and imagery techniques are presented in chapter 11. Chapter 12 covers positive suggestions, including relaxation techniques and positive self-talk. Contains 74 references. (TJQ)

His study of the use of mental imagery in the elementary school classroom led Jerome S. Allender to examine imagery techniques in the adult learning process, the improvement of teaching skills, and the enhancement of the human learning experience in general. Four world views form the investigative framework for this research, as each individual study yields significant data, findings, and conclusions which are then given practical application. This comparative approach broadens the scope of the work to include not only relevance in the classroom, but also exploration of the role imagery plays in the interaction of fantasy and reality.

Imagery is one of the exciting frontiers in cognitive therapy. From the outset of cognitive therapy, Aaron Beck recognized the importance of imagery in the understanding and treatment of a patient's prblems. Recently, there has been significant developments, both empirically and clinically, showing the importance of imagery in the development, maintenance and treatment of psychopathology. The Oxford Guide to Imagery in Cognitive Therapy is a practical guide for clinicians wishing to understand imagery phenomenology, and intergrate imagery-based interventions into their cognitive therapy practice. The book is oriented to both the needs of experienced clinicians who wish to bring imagery into their repertoire, and experienced cognitive therapists, who wish to refine and extend their use of imagery in cognitive therapy.

Presenting an empirically underpinned synthesis of research and theory, while offering guidance for applied practitioners, this is the first book to comprehensively map the psychology of learning, playing, and coaching the world's favourite sport. The book provides a complete analysis of key topics that capture the broad range of football psychology such as personality, motivation, cognition, and emotion; coaching and team essentials; psychological skills for performance enhancement; and developing players in youth football. Including contributions from a range of international researchers, each chapter provides a review of the relevant literature, key theories, real-world examples, and reflections on how knowledge can be applied in practice. Split into four sections, the book covers a diverse range of topics relevant not only to coaching and performance but also to personality development and health promotion. Essential reading for any student, researcher, or professional in the area, the book is the most cutting-edge overview of how psychology can explain and improve the way football is both played and understood.

Our ability to be conscious of the world around us is often discussed as one of the most amazing yet enigmatic processes under scientific investigation today. However, our ability to imagine the world around us in the absence of stimulation from that world is perhaps even more amazing. This capacity to experience objects or scenarios through imagination, that do not necessarily exist in the world, is perhaps one of the fundamental abilities that allows us successfully to think about, plan, run a dress rehearsal of future events, re-analyze past events and even simulate or fantasize abstract events that may never happen. Empirical research into mental imagery has seen a recent surge, due partly to the development of new neuroscientific methods and their clever application, but also due to the increasing discovery and application of more objective methods to investigate this inherently internal and private process. As the topic is cross hosted in Frontiers in Perception Science and Frontiers in Human Neuroscience, we invite researchers from different fields to submit opinionated but balanced reviews, new empirical, theoretical, philosophical or technical papers covering any aspect of mental imagery. In particular, we encourage submissions focusing on different sensory modalities, such as olfaction, audition somatosensory etc. Similarly, we support submissions focusing on the relationship between mental imagery and other neural and cognitive functions or disorders such as visual working memory, visual search or disorders of anxiety. Together, we hope that collecting a group of papers on this research topic will help to unify theory while providing an overview of the state of the field, where it is heading, and how mental imagery relates to other cognitive and sensory functions.

This practical book describes the specific use of receptive (listening) methods and techniques in music therapy clinical practice and research, including relaxation with music for children and adults, the use of visualisation and imagery, music and collage, song-lyric discussion, vibroacoustic applications, music and movement techniques, and other forms of aesthetic listening to music. The authors explain these receptive methods of intervention using a format that enables practitioners to apply them in practice and make informed choices about music suitable for each of the different techniques. Protocols are described step-by-step, with reference to the necessary environment, conditions, skills and appropriate musical material. Receptive Methods in Music Therapy will prove indispensable to music therapy students, practitioners, educators and researchers.

The Cambrian radiation was the explosive evolution of marine life that started 550,000,000 years ago. It ranks as one of the most important episodes in Earth history. This key event in the history of life on our planet changed the marine biosphere and its sedimentary environment forever, requiring a complex interplay of wide-ranging biologic and nonbiologic processes. The Ecology of the Cambrian Radiation offers a comprehensive and surprising picture of the Earth at that ancient time. The book contains contributions from thirty-three authors hailing from ten countries and will be of interest to paleontologists, geologists, biologists, and other researchers interested in the global Earth-life system.

*Use the therapeutic potential of art to make progress in your practice Artful Therapy shows you how to use art to make a difference in therapy. Using visual imagery and art creation, you can help people with medical problems understand how they feel about their illness; victims of abuse "tell without talking"; and substance abuse and eating disorder clients tap into unresolved issues. These are just a few examples of how the power of art can improve your practice. Ideal for mental health professionals and allied workers with little or no art background, this accessible and proven guide takes you through the techniques of using art and visual imagery, and shows you how they can benefit clients of varying ages and abilities. With the art therapy tools provided, you can open potentially groundbreaking new dialogues with your clients. Author Judith Aron Rubin draws on more than forty years experience as an art therapist to help you maximize the value of art as a therapeutic tool, in both the mental health disciplines, such as psychology and social work, and related specialties. An accompanying DVD contains models for practitioners, showing art therapy being used in actual clinical practice. The DVD clearly models: * Initiating the art-making process * Using art in assessment * Using mental imagery, with or without art * Implementing other art forms--such as drama and music--in therapy * Using art with a variety of client types, including children, families, and groups*

** Assigning art as "homework" Whether or not you have used art therapy with your clients or are thinking about integrating art therapy in your practice, making the most of art in the clinical setting begins with Artful Therapy.*

The purpose of the guide is to address changes in American schools, focusing on holistic learning, multiple intelligences learning theory, and the importance of aesthetic experiences in children's education. It strives to empower professional teachers with knowledge about new learning theories with concrete activities to put that knowledge into practice. The goal is to address the education of the whole child in terms of mind, body, spirit, and social consciousness. Part 1 of the work aims to give direction and perspective to curricula choices of the past, present, and future. Part 2 specifically addresses the present and future need to educate the student via a holistic approach focusing upon the uniqueness and individual potential of each student. The importance of Howard Gardner's mul

intelligences are defined and explained in detail as important points to address the whole education of a child in the areas of: (1) verbal-linguistic; (2) logical-mathematical; (3) spatial; (4) musical; (5) bodily-kinesthetic; (6) interpersonal; and (7) intrapersonal. The seven intelligencies are incorporated into all subsequent exercises in the guide. The third section consists of activities in the areas of knowing the self, utilizing all of the senses, and the world of art as an educational tool. Each activity provides the teacher with a purpose, age level, list holistic principles utilized, intelligences utilized, and materials necessary. Contains 96 references. The work is fully indexed. "The treatment in this book helps to ease the suffering of people with social anxiety disorder by helping them to abandon the psychological factors that maintain their constant expectation of social catastrophe, while allowing them to retain the wonderful personal qualities they have that facilitate genuine and fulfilling relationships. Cognitive behavior therapy has been shown to be very helpful SAD over many research trials with severe and complex clients. Imagery-based CBT "enhances" traditional approaches by emphasizing the benefits of facilitating cognitive and emotional change via the imagery mode. Multisensory imagery is highly emotionally evocative. Clients are encouraged to incorporate vivid, multisensory imagery into every aspect of the treatment in this book"--

A guide for parents and teachers who want to be involved in enhancing the creativity of gifted children. Specific measures of creativity that may be used to identify gifted children are described as are the abilities of children to learn school subjects, lead others, and perform in the arts. Additional chapters discuss the kind and sources of problems gifted children face, the role of parents and teachers in assisting them, approaches to stimulate creative imagination, various learning methods and curriculum and instruction.

Is a pear sweeter than a peach? Which of Mona Lisa's hands is crossed over the other? What would the Moonlight Sonata sound like played by a brass band? Although these are questions that appeal to mental imagery in a variety of sensory modalities, mental imagery research has been dominated by visual imagery. With the emergence of a well-established multisensory research community, however, it is time to look at mental imagery in a wider sensory context. Part I of this book provides overviews of unisensory imagery in each sensory modality, including motor imagery, together with discussions of multisensory and cross-modal interactions, synesthesia, imagery in the blind and following brain damage, and methodological considerations.

Part II reviews the application of mental imagery research in a range of settings including individual differences, skilled performance such as sports and surgical training, psychopathology and therapy, through to stroke rehabilitation. This combination of comprehensive coverage of the senses with reviews from both theoretical and applied perspectives not only complements the growing multisensory literature but also responds to recent calls for translational research in the multisensory field.

The Handbook of Research and Policy in Art Education marks a milestone in the field of art education. Sponsored by the National Art Education Association and assembled by an internationally known group of art educators, this 36-chapter handbook provides an overview of the remarkable progress that has characterized this field in recent decades. Organized into six sections, it profiles and integrates the following elements of this rapidly emerging field: history, policy, learning, curriculum and instruction, assessment, and competing perspectives. Because the scholarly foundations of art education are relatively new and loosely coupled, this handbook provides researchers, students, and policymakers (both inside and outside the field) an invaluable snapshot of its current boundaries and rapidly growing content. In a nutshell, it provides much needed definition and intellectual respectability to a field that as recently as 1960 was more firmly rooted in the world of arts and crafts than in scholarly research.
