There have been other generations of Jaguar XK since, but the definitive incarnation is the family of 6-cylinder sports cars that stretch from the late 1940s to the mid-1970s, from XK120 to the E-Type. On road, on track and on rally stage, they built the foundations of Jaguar 's sporty image and giant-killing reputation, not to mention its commercial roots - especially in America. By any definition, the 6-cylinder XKs are at the heart of everything that Jaguar grew into. This is the complete story of the whole 6-cylinder XK generation, the circumstances, the people and the events that created it and made it a sports car legend – and guaranteed that forever after, in Jaguar 's vocabulary, XK would always mean ' sports car ' .

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about

parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are

redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies

sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

This book covers the vast majority of Powerstroke Diesel engines on the road, and gives you the full story on their design. In November 1940, 44 young military cadets graduated from the first Army Air Corps

Navigational Class at Miami University in Coral Gables, Florida. The cadets came from all parts of the United States—from the urban areas of the East Coast, westward to the Appalachian Mountains, to the Midwest and prairie states, to the Rocky Mountains, and the West Coast. These young men came from the inner cities, the farmlands, the mountains, and coastal regions, and they were all volunteers. Most were college-educated and in the prime of life. World War II was raging in Europe and it was becoming increasingly difficult for the United States to remain neutral. A few farsighted men in our small Army Air Corps saw the essential requirement for trained celestial navigators in our military aircraft. The instructor for this navigational class was a 34-year-old high school dropout by the name of Charles J. Lunn. Charlie Lunn had first learned the art of celestial navigation aboard freighter ships in the Caribbean and later as the navigator aboard Pan American Airline planes flying to Europe and Asia. This book was written by one of those young navigators, Edgar D. Whitcomb, from Hayden, Indiana. Ed Whitcomb tells about these young comrades-in-arms and draws vivid word portraits of them as we learn of their assignments to Air Corps units. We learn how they survived and how some died in World War II. We learn about Ed's own pre-Pearl Harbor assignment with the 19th Bombardment Group at Clark Field in the Philippines and the unfortunate, and perhaps inexcusable, decision not to deploy our B-17 Flying Fortress bombers immediately after the attack on Pearl Harbor resulting in the loss of 40 percent of those aircraft as they sat parked at Clark Field when the Japanese destroyed that vital military air base on the afternoon of 8 December 1941. The Versailles Treaty after WWI "Mandated Islands" in the Pacific to the Japanese. President Roosevelt felt the Japanese were illegally installing military fortification on these "Mandated Islands" which was in direct violation of the WWI Treaty. Amelia Earhart, a popular female pilot who set many aviation records, wanted to increase her popularity by flying around-the-world. This would be a huge accomplishment that no pilot, man or woman, had attempted before. She left California, March 17, 1937, in a twin-engine Lockheed Electra and flew to Honolulu on the first leg of her historic flight with Fred Noonan and Harry Manning as her navigators. Unfortunately, she crashed on take-off and her Electra was so badly damaged, it had to be shipped back to the Lockheed plant in California for repairs. Amelia and her publisher husband, George Putnam didn't have the money to repair her Electra and make another attempt to fly around-the-world, so Mr. Putnam approached President Roosevelt and asked if the U.S. government could help? FDR had met Amelia previously and knew of her plans to fly around-the-world. In 1937, FDR believed the Japanese were illegally preparing for war on "Mandated" islands in the Pacific. Marine Colonel Earl Ellis tried to sneak into Truk Atoll to gather information, but was caught on the island of Palau and killed. FDR believed that maybe a civilian pilot who was going to fly around-

the-world might have a better chance to obtain the information he needed, so agreed to help Amelia on her request. But, FDR only did so, if Amelia would agree to take a few pictures of Japanese island fortifications along the way. Although a staunch 'pacifist' Amelia agreed to the president's stipulations. The U.S. government helped plan her second attempt, provided her plane with larger engines, installed additional fuel tanks and reconnaissance cameras, but did so with little fanfare or publicity. Instead of flying from East to West as she planned on her first attempt, she flew West to East with only Fred Noonan as her navigator. Prior to her flight it's reported she was sworn into the Army Air Force as an officer and confided to a friend, "Imagine me being a spy!" Amelia left California on May 21st and headed for Miami, Puerto Rico, Brazil, Africa, India, Bangkok, Singapore and Dutch East Indies, where Mr. F.O. Furman, a Lockheed maintenance specialist, met Amelia and checked her Electra and cameras for 3-days. At each stop, 55-gallon drums of fuel would be waiting for her, even if she flew into a field that was not on her announced itinerary. She and Fred Noonan left Lae, New Guinea on July 1st, 1937 and headed for Howland Island, 2,556 miles away. The Coast Guard Cutter ITASCA waited just off Howland to handle all communications as she approached. Unfortunately, when Harry Manning was the designated navigator on her first attempt, he arranged for

Navy ships to communicate with her in Morse Code. No one told the Navy vessels that Manning was no longer her navigator. Neither Amelia or Fred could read Morse Code! Amelia Earhart's Final Flight tells the story of how she crashed on Mili Atoll in the Marshall Islands, was captured by the Japanese, taken to Saipan where she was held in prison for several years before being killed. Eye-witnesses in the Marshall Islands and on Saipan provided the true accounts of what actually happened to Amelia on her historic flight, what happened when she was captured, how she was killed and reaction by U.S. and Japanese leaders. It also relates how U.S. Marines found Amelia's briefcase and also found her Electra on Saipan when they attacked in 1944. David O'Malley, a member of the Writers Guild, wrote an interesting screenplay that's based on these eye-witness reports. It gives a rational explanation why both the U.S. and Japan have kept Amelia's capture and death a secrete since her Final Flight.

A never-before-seen collection of United States National Park Service maps This book brings together a collection of over 400 maps produced by the United States National Park Service from 1910 to today. Photographer Brian Kelley has impulsively archived the rarely seen treasures over the past three years, uncovering a design portfolio with little to no credit to their respective designers. The growing collection

displays a progressive design approach, from more typographic-driven covers, to the proliferation of duotone print production, culminating in the Unigrid system developed by Italian designer Massimo Vignelli in the 1970s.

These celebrated carburetors have been fitted to some of the most exciting and memorable cars and have been more widely used by tuners and modifiers, both for road and competition machinery, than any alternative. The mysteries of why and how they work so well and the practicalities of getting the best from them in any application are explained at length. Setting the carburetor to suit a particular engine, fault-finding on an existing installation, and the maintenance and repair of older carburetors are all topics which receive detailed attention. Anyone maintaining or restoring a classic Weber-equipped car, or contemplating a Weber-based conversion, or
