This volume examines ways in which service delivery to individuals with autism can be improved from both ends of the basic-applied research spectrum. It introduces the concept of translational scholarship and examines real-world value in developing relevant interventions. Each area of coverage reviews current findings on autism from basic research and, then, discusses the latest applied research literature to create a roadmap for researchers, clinicians, and scientist-practitioners to develop new, effective strategies as children, adolescents, and adults with autism continue to learn and grow. Featured coverage includes: Why practice needs science and how science informs practice. The social learning disorder of stimulus salience in autism. Assessment and treatment of problem behaviors associated with transitions. Understanding persistence and improving treatment through behavioral momentum theory. The behavioral economics of reinforcer value. Increasing tolerance for delay with children and adults with autism. Autism Service Delivery is an essential resource for researchers, clinicians and scientist-practitioners, and graduate students in the fields of developmental psychology, behavioral therapy, social work,

Military intervention always has been and always will be an important part of foreign policy, a tool to further national interests and influence world events. Many scholars have tried to explain the intervention behavior of states in crises, conflicts, and wars. When and why do states intervene, and what are reasons for nonintervention? What conflicts and crises are more likely to call for intervention, and why? When is intervention successful? The explanations are manifold and include political, military, economic, social, environmental, domestic, and humanitarian factors. The theoretical literature covers a gamut of realist intentions, ranging from security, power, and national interests, as guides to state action; to emphasis on international trade and economics; and to domestic politics. Some argue for explanations based on idealistic aspirations, such as democracy and human rights. Many studies focus on a mix of different reasons. From this vast field, the author has selected international crises involving any form of U.S. activity in the

years 1946-2006. Within these U.S. activities, the author distinguishes between crisis response with and without naval forces, as this study intends to advance the knowledge of the use of U.S. naval forces as a response to international crises and to contribute to a better understanding of when and how the U.S. Navy is deployed.

Military Deployment and its Consequences for Families

The Future of the Public's Health in the 21st Century

War-related separations challenge families in many ways. The worry and uncertainty associated with combat deployments provokes anxiety in family members left at home. Lengthy separations may challenge

the personal, social, and economic coping resources of families at home. In this war, thanks to medical advances, many service members who previously would have died of their injuries are returning home to live long, although altered lives. As a result, families are facing the additional challenge of assisting service members who have experienced amputation, traumatic brain injury, and psychological wounds. These challenges are faced not only by service members in the active component of the armed forces, but also by service members in the National Guard and Reserves. In response, the Department of Defense has launched unprecedented efforts to support service members and families before, during and after deployment in all locations of the country as well as in remote locations. These support efforts are focused not only on medical care, but also mental health care and logistical support. Research about families and war tends to move forward in fits and starts associated with major conflicts, and there is currently an increasing flow of family research moving into the scientific domain. Military Families and the Aftermath of Deployment focuses heavily on the aftermath of deployment for families. It is the first

compilation of such chapters released in relation to the wars in Iraq and Afghanistan, and includes contributions from leading researchers from diverse disciplines and arenas, including universities, the Veterans Administration, and the Department of Defense, as well as international researchers from Canada, and Croatia, among others. This work will be of use to graduate students and researchers in family studies, social work, counseling, military science, psychology and sociology.

How the partnership between Ford and the UAW, forged through more than fifty pivotal events, transformed their capacity to combine good jobs with high performance. In 2009, the Ford Motor Company was the only one of the Big Three automakers not to take the federal bailout package. How did Ford remain standing when its competitors were brought to their knees? It was a gutsy decision, but it didn't happen in isolation. The United Auto Workers joined with Ford to make this possible—not only in 2009, but in a series of more than fifty pivotal events during three decades that add up to a transformation that simultaneously values work and delivers results. The pivotal events—some planned and some unplanned;

some at the facility level and some at the enterprise level -were not all successful. All had the potential, however, to further the transformation, and all provide insight into how large-scale system change really happens. The authors—each with years of experience with Ford, the UAW, and the industry—provide an unprecedented inside look at how core operating assumptions are shifted and at the emergence of integrated operating systems for quality, safety, and other aspects of the enterprise. It is a transformation built on a foundation of dignity and mutual respect, guided by a vision of combining good jobs with high performance.

Rutter's Child and Adolescent Psychiatry is the leading textbook in its field. Both interdisciplinary and international, it provides a coherent appraisal of the current state of the field to help researchers, trainees and practicing clinicians in their daily work. Integrating science and clinical practice, it is a comprehensive reference for all aspects of child and adolescent psychiatry. New to this full color edition are expanded coverage on classification, including the newly revised Diagnostic and Statistical Manual of Mental Disorders (DSM-5), and new chapters on systems neuroscience, relationship-based treatments, resilience, global psychiatry, and infant mental health. From an international team of expert editors and contributors, this sixth edition is essential reading for all professionals working and learning in the fields of child and adolescent mental health and developmental psychopathology as well as for clinicians working in primary care and pediatric settings. Michael Rutter has contributed a number of new chapters and a Foreword for this edition: "I greatly welcome this new edition as

providing both a continuity with the past and a substantial new look." —Professor Sir Michael Rutter, extract from Foreword. Reviews of previous editions: "This book is by far the best textbook of Child & Adolescent Psychiatry written to date." —Dr Judith Rapoport, NIH "The editors and the authors are to be congratulated for providing us with such a high standard for a textbook on modern child psychiatry. I strongly recommend this book to every child psychiatrist who wants a reliable, up-to-date, comprehensive, informative and very useful textbook. To my mind this is the best book of its kind available today." —Journal of Child Psychology and Psychiatry

As libraries move into the 21st century, quality management has become a key focus of the effort to create a service culture that meets - and indeed exceeds - customer requirements. The language of customer service has become common in the library and information sector, as have many of the techniques associated with the provision of customer-focused services. However, there is a danger that customer service may be seen as a 'bolt on' to existing core provision in the form of feedback mechanisms, information leaflets and customer-training sessions. One of the challenges facing managers is to go beyond the acknowledgement of the importance of a customer focus, and to develop an understanding of how this focus can be embedded in the culture of their services via strategic and operational management. This new management guide addresses this challenge. Contributed by LIS professionals with extensive experience in the

management of public and academic services, each chapter presents a good practice guide to an element of strategic or operational management with the customer placed at centre stage: the users' perspective; planning and policy making; leadership and management; human resource planning; marketing as a tool for LIS managers; assuring quality; planning buildings for customers and services; developing a service culture through partnerships; virtual service. Readership: This book is essential reading for managers of library and information services from senior to team managers, and also for all those involved in devising strategy and policy for staff and service development. It is relevant to libraries and information services in any area of the world.

Customer service is of critical importance for the tourism and hospitality sector now more than ever before as customers are looking to increase value for money and are less forgiving of mediocre service. However, despite its importance, quality customer service is the exception rather than the norm in many parts of the world. *Customer Service for Hospitality and Tourism* is a unique text and vital to both students and practitioners as it explains not only the theory behind the importance of customer service but also acts as a guidebook for those wishing to put this theory into practice. In essence it is the 'whys' and 'hows' of customer service. It is easy to read, very current, and full of references to all the latest research from both academic and practitioner literature. Chapters cover important topics such as the financial and behavioural consequences of

customer service, consumer trends influencing service, developing and maintaining a service culture, managing service encounters, the importance of market research, building and maintaining customer relationships, providing customer service through the servicescape, the impact of technology on customer service, the importance of service recovery, and promoting customer service internally and externally. Key features include: An 'At Your Service' Spotlight at the beginning of each chapter focuses on the achievements of successful individuals related to the art of customer service. Each chapter contains a 'Service Snapshot' - short, real-life cases to illustrate a particular concept or theoretical principle presented in the chapter. Detailed international 'Case Studies', which cover a variety of sectors, organizations and regions designed to foster critical thinking, the cases illustrate actual business scenarios that stress several concepts found in the chapter. They analyze customer service in the U.S., South America, South Africa, Europe, Russia, Australia, China, Canada, Korea and Dubai.

Bridging the Gap Between Science and Practice

Decades of research have demonstrated that the parent-child dyad and the environment of the family—“which includes all primary caregivers”—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These

include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to

promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.
