Museum and other non-profit professionals have begun to realize that the complete visitor experience is the key to repeat attendance, successful fundraising, and building audience loyalty. Taking lessons learned by successful experience-shapers in the for-profit world, Stephanie Weaver distills this knowledge for museums and other organizations which depend on visitor satisfaction for success. Is your institution welcoming? Are the bathrooms clean? Does the staff communicate well? Are there enough places to sit? These practical matters may mean more to creating a loyal following than any exhibit or program the institution develops. Weaver breaks the visitor experience down to 8 steps and provides practical guidance to museums and related institutions on how to create optimal visitor experiences for each of them. In a workshop-like format, she uses multiple examples, exercises, and resource links to walk the reader through the process.

Brembo, a leader in the development and production of high performance braking systems is turning 60. Over the decades, the principal mission of the Italian company has been to brake to best effect the greats on two and four wheels as well as daily users of private cars and motorcycles. The history, evolution and on-going success of this prestigious Italian company are the themes of this official book, which opens with a preface by the Brembo chairman, Alberto Bombassei. The book reviews the diverse facets of the "Brembo universe": from its commitments in the automotive, motorcycling and motorsport fields to its attention to all aspects of design, always one of Brembo's strong suits, from the progressive internationalization of the company through to the particularly topical aspects of sustainable production. The contributions of the six principal authors - Vincenzo Borgomeo, Massimo Clarke, Gaetano Cocco, Patrizia Giangualano, Lorenzo Ramaciotti and Umberto Zapelloni - are complemented by a similar number of testimonies from figures from within the company and those who worked there at length. The Brembo "phenomenon" is also presented through a wealth of fascinating photographs, mostly drawn from the company archives, which document the unique story of a manufacturing company born in Italy and now a true icon of Italian excellence throughout the world.

The Triumph 350cc and 500cc unit-construction twins were called the 'C' Series, and were made between 1957 and 1974. The range started with the 350cc 'Twenty-one' - a sedate touring bike with full enclosure in the form of the famous Triumph 'Bathtub' - went through such famous names as the Speed Twin, Tiger 100 and Trophy, and ended with the rip-roaring Daytona and the off-road Adventurer. This book deals with the whole range, giving the history of all the models, and also describes the restoration of a 1969 Trophy T100C.

Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices.

Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
