*Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption—the amount of fuel consumed in a given driving distance—because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.*

*Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: -Build an accurate threat model for your vehicle -Reverse engineer the CAN bus to fake engine signals -Exploit vulnerabilities in diagnostic and data-logging systems -Hack the ECU and other firmware and embedded systems -Feed exploits through infotainment and vehicle-to-vehicle communication systems -Override factory settings with performance-tuning techniques -Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.*

*In a world in which media images of crime and deviance proliferate, where every facet of offending is reflected in a 'vast hall of mirrors', Framing Crime: Cultural Criminology and the Image makes sense of the increasingly blurred line between the real and the virtual. Images of crime and crime control have become almost as 'real' as crime and criminal justice itself. The meaning of both crime and crime control now resides, not solely in the essential - and essentially false - factuality of crime rates or arrest records, but also in the contested processes of symbolic display, cultural interpretation, and representational negotiation. It is essential, then, that criminologists are closely attuned to the various ways in which crime is imagined, constructed and framed within modern society. Framing Crime responds to this demand with a collection of papers aimed at helping the reader to understand the ways in which the contemporary 'story of crime' is constructed and promulgated through the image. It also provides the relevant analytical and research tools to unearth the hidden social and ideological concerns that frequently underpin images of crime, violence and transgression. Framing Crime will be of interest to students and academics in the fields of criminology, crime and the media, and sociology.*

*The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards.*

*By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain choice as 'real' as crime and criminal justice itself. The Author has experience in Ice Age Climatology and Geology in the area from the Black Hills, South Dakota to eastern Nebraska with Midland College, the University of Nebraska Department of Geology and Morrill Hall State Museum of Paleontology. He mapped Ice Age deposited soils and landforms including fossil deposits. He performed Arctic Surveys with the US Navy Oceanographic Office ships USNS Dutton and Michelon and the Coast and Geodetic Survey ships Surveyor and Oceanographer. These were the first modern geophysical surveys in the North Sea and offshore Alaska, Washington to California and Hawaii. His particular expertise in modern geophysical surveying and mapping has led to well grounded understanding of coastal and sea floor features of the arctic and Antarctic, using new ice and sediment mapping techniques tied to modern navigation and positioning. His hobby is understanding man's adaptability to climate, early migrations, exploration and appreciation of the Neolithic mind gaining man's survival abilities. Adequate education of the public, including historic climate change information, for planet management seems necessary. The fact that 700 million years ago, earth was locked in ice cover for millions of years should be realized. These vast volcanic eruptions created a greenhouse gas atmosphere and earth's climate alternated between too hot and too cold for human development. These conditions should be understood and avoided at all costs. For future survival, humans must understand the importance of climate and earth management, and live and act accordingly.

In the rapid growth of the Chinese economy as the "world's factory and market", while this process has been supported by foreign companies, local Chinese companies have also emerged in the brief span of about 10 years to become major players. This is an extremely rare case in the world history and recently even among the BRICs and the NIEs. One cannot help but wonder what strategic positions foreign firms have adopted to cope with the extraordinary, fierce challenges they have had to face from local Chinese firms. A workshop discussed and illuminated the corporate activities and competitive and cooperative strategies of both Chinese and foreign firms from the perspective of Japanese, European, US and Asian firms.

This casebook integrates a legal assessment of energy resources with economic and environmental issues, thereby encouraging thoughtful analysis of energy policy issues confronting the U.S. and the world. Historical and contemporary legal issues confronting a range of energy resources are surveyed, including water power, coal, oil and gas, electricity, and nuclear power. Particular attention is paid to the need to reduce consumption of imported oil by motor vehicles. The third edition of the book contains considerable material on problems presented by climate change, including legal issues confronting renewable power projects and various conservation measures. We believe that the material can be taught in many different variations, and we continue to teach it in a somewhat different

Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz - rich cars, poor quality. There's only one Saturn you should buy. Toyota - enough apologies: "when you mess up," fess up."
