Integrated pest management (IPM) is not a static approach but one that is constantly evolving. Mass international travel, climate change and other factors contribute to the spread of new pests, and the pests themselves are constantly seeking out weaknesses in our defences. An understanding of the

threats pests pose to collections and the necessity for a systematic approach to combat them is now firmly embedded in the work of collection care practitioners. In addition, the trustees and sponsoring bodies of collecting institutions recognise that it is a significant and cost-effective element of good collections management. 2011: A Pest Odyssey, 10 years later describes examples of how the IPM approach has been adopted by large and small institutions around the world, and highlights the many lessons learned along the way. Principal among these is never to become complacent and tied down to routine processes. Another important lesson is the need to ensure colleagues understand and are involved with the process of pest management. There is also a need to

understand the wider implications of any pest control activity, for example the effect of chemical treatments on DNA. Coming out of the second Pest Odyssey conference, this book will promote wider understanding and implementation of IPM as an integral part of any collection management programme. The organisers and editorial team hope that everyone involved with the care of cultural heritage collections and buildings will find something of interest and value in this work.

The Theosophical Society (est. 1875 in New York by H. P. Blavatsky, H. S. Olcott and others) is increasingly becoming recognized for its influential role in shaping the alternative new religious and cultural landscape of the late nineteenth and the twentieth century, especially as an early promoter of interest in Indian and Tibetan religions and philosophies. Despite this increasing awareness, many of the central questions relating to the early Theosophical Society and the East remain largely unexplored. This book is the first scholarly anthology dedicated to this topic. It offers many new details about the study of Theosophy in the history of modern religions and Western esotericism. The essays in *Imagining the East* explore how Theosophists during the formative period understood

the East and those of its people with whom they came into contact. The authors examine the relationship of the theosophical approach with orientalism and aspects of the history of ideas, politics, and culture at large and discuss how these esoteric or theosophical representations mirrored conditions and values current in nineteenth-century mainstream intellectual culture. The essays also look at how the early Theosophical Society's imagining of the East differed from mainstream 'orientalism' and how the Theosophical Society's mission in India was distinct from that of British colonialism and Christian missionaries. In this fully revised and expanded edition, Nickelsburg introduces the reader to the broad range of Jewish literature that is not part of either the Bible or the standard rabbinic works.

that Voice has been so sadly and prematurely silenced? These were the formidable questions we faced as we sat down to compose a brief but intimate portrait of a Legend. The answer to all of them however, became evident very, very quickly: Through her Music. As we organized the research, assembled the elements, and prepared to outline our approach, we were struck by a profound revelation: Whitney Houston had lived her life through her Music, so how could one ever begin to tell her astounding story, unless they started with her Music? As we examined her history through the prism of that Music, it immediately became amazingly clear that every phase of her remarkable life could be viewed through the telling titles of some of her greatest songs. The subject of the posthuman, of what it means to be or to cease to be human, is emerging as a shared point of debate at large in the natural and social sciences and the humanities. This volume asks what classical learning can bring to the table of posthuman studies, assembling chapters that explore how exactly the human self of Greek and Latin literature understands its own relation to animals, monsters, objects, cyborgs and robotic devices. With its widely diverse habitat of heterogeneous bodies, minds, and selves, classical literature again and again blurs the boundaries between the human

and the non-human; not to equate and confound the human with its other, but playfully to highlight difference and hybridity, as an invitation to appraise the animal, monstrous or mechanical/machinic parts lodged within humans. This comprehensive collection unites contributors from across the globe, each delving into a different classical text or narrative and its configuration of human subjectivity—how human selves relate to other entities around them. For students and scholars of classical literature and the posthuman, this book is a first point of reference.

*Little Fuzzy is the name of a science fiction novel by Henry Beam Piper. It is generally seen as a work of juvenile fiction. It was nominated for the 1963 Hugo Award for Best Novel. of the times who wanted to give credence and support to their own belief systems. The author examines the different apparatus of state ideology which processed the social, religious and political representations of Boudica for public absorption and helped form the popular myth we have of Boudica today. By exploring images of the Briton warrior queen across two reigns which witnessed an act of political union and a move from English female rule (under Elizabeth I) to British/Scottish masculine rule (under James VI & I) the author conducts a critical cartography of the ways in which gender,

colonialism and nationalism crystallised around this crucial historical figure. Concentrating on the original transmission and reception of the ancient texts the author analyses the historical works of Hector Boece, Raphael Holinshed and William Camden as well as the canonical literary figures of Edmund Spenser, William Shakespeare and John Fletcher. She also looks at aspects of other primary sources not covered in previous scholarship, such as Humphrey Llwyd's Breuiary of Britayne (1573), Petruccio Ubaldini's Le Vite delle donne illustri, del regno d'Inghilterra, e del regno di Scotia

(1588) and Edmund Bolton's Nero Caesar (1624).

Furthermore, she incorporates archaeological research relating to Boudica.

According to William Leach, religious communities that have come to North America have not been able to withstand the damaging influence of its consumer-oriented society which has subverted ecclesial customs, values, and practices. Rather than resisting, most of these groups have sought to integrate Christianity into the new culture. By doing so, they run the risk of marginalizing the church and fundamentally altering its

teachings and practice. Of course, the real danger does not reside in the occasional use of isolated elements of our culture, the unreflected application of any technology available, the replacement of traditional ecclesial practices with the techniques of the business world, or even the substitution of ecclesial foundations of authority. Rather, danger lies in a set of fundamental principles that together define a basic orientation which is naturally and almost mindlessly attracted to these secular devices, sees no harm in them, justifies and amplifies their effects, and effectively supplants

the mind of Christ which is supposed to govern the church. This study analyzes and documents the effects of that mindset and calls us back to the biblical and traditional alternatives that alone can bring healing and recovery to the church.

The medicinal use of plants, animals and microorganisms has been a part of human evolution and likely began before recorded history. Is it possible that this knowledge can be used to create powerful new drugs and solve some of the human health problems facing us today? This book is a collection of an expert team of agronomists, chemists,

biologists and policy makers who discuss some of the processes involved in developing a naturally-sourced bioactive compound into a drug therapy. These experts define a natural compound and elucidate the processes required to find, extract and define a naturally-derived bioactive molecule. Finally, they describe the necessity for understanding the fundamental mechanisms of disease before applying bioactive molecules in bioassay-guided drug discovery platforms.

*Racing Against History* is the stunning story of three powerful personalities who sought in 1940 to turn the tide of history. David Ben-Gurion, Vladimir Jabotinsky, and Chaim Weizmann—the leaders of the left, right, and center of Zionism—undertook separate missions that year to America, then frozen in isolationism, to seek support for a Jewish army to fight Hitler. Their efforts were at once heroic and tragic. The book presents a portrait of three historic figures and the American Jewish community—at the beginning of the most consequential decade in modern Jewish history—and a cautionary tale about divisions within the Jewish community at a time of American
