Textbooks play a key role in enhancing the quality of learning, especially in the context of low-income Sub-Saharan African (SSA) countries characterized by large class-size, poorly motivated and inadequately trained teachers, and short effective school years. There are also high rates of illiteracy among parents and few reading materials at home for the student to bank on. Despite extensive investments by governments, the World Bank and other development partners, the majority of students in

primary and secondary schools in SSA still lack the benefit of access to textbooks and the key reason for this shortage is affordability: textbooks are generally much more costly in SSA than in other developing regions. The need to increase access to key learning resources is of particular urgency because most African countries experience low learning outcomes which in part contributes to a high drop-out rate. Only two-thirds of those who enter school reach the final grade and only about half of these master basic numeracy and literacy skills. And although quality improvement depends on many factors inside and outside the school,

there is wide agreement that availability of textbooks is both an indispensable and a cost-effective way of improving the quality of the learning process. A recent World Bank study examined the actual costs of textbooks, the scope for cost reduction, the portion of a national budget countries allocate to teaching and learning materials (TLMs) and hurdles in the way of making textbooks available to student. Some interesting findings from the study -

- The availability of affordable textbooks to all students could be dramatically improved by devoting an estimated 3 to 4 percent of the primary education budget and 6 to 7 percent of the secondary education

budget - The production process †“ methods, copyright, length of print runs, effective procurement practices †“ rather than the production costs should be the target of cost saving strategies - The increased integration of ICTs into education in SSA can provide important opportunities for promoting availability of electronic TLMs but electronic TLMs are not a substitute for printed TLMs including textbooks

children, and experience higher mobility. This book examines the basic mechanisms behind the modernisation of demographic behaviour. The author has marshalled an impressive array of statistical material relating to sixty-seven countries, half of them less developed countries. Most of the tables are time-series, covering many decades and sometimes go back to the nineteenth, and even eighteenth centuries. The whole sweep of western experience is dealt with here impartially. Though technically sophisticated, the book also covers issues of interpretation and analysis. The author puts forward a number of challenging propositions: mortality decrease is

shown to necessarily precede fertility and decline, so-called exceptions being simply false exceptions. He shows how the decline of fertility is dependent on important and manifold social transformations. The strong connections between international migration and the course of demographic transition are demonstrated, as is the fact that less developed countries are following the same general patterns as MDCs. There is also discussion of why the theory of demographic transition must include the effect of population changes on the economic progress of society.

Attitudes - cognitive representations of our evaluation of ourselves, other people, things, actions, events, ideas - and attitude change have been a central concern in social psychology since the discipline began. People can - and do - have attitudes on an infinite range of things but what are attitudes, how do we form them and how can they be modified? choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to

getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones.

Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Educational Assessment in a Time of Reform provides background information on large-scale examination

systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough . If not, then how can it be improved? The aim of this book is to provide a point of departure for

discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation. An award-winning professor of economics at MIT and a Harvard University political

scientist and economist evaluate the reasons that some nations are poor while others succeed, outlining provocative perspectives that support theories about the importance of institutions.

CONNECTING LIVES AND LEARNING is a project dedicated to connecting learning to student lives, connecting teachers with the latest middle years research, and better connecting primary and secondary schools to keep students at school longer. Based in Adelaide's lower socio-

economic northern urban fringe, the project helps teachers use students' everyday experience and expertise to develop new ways of teaching and learning that involve students in intellectually challenging tasks. This book tells the stories of real teachers, in real classrooms, making real attempts for change, and not always succeeding. It is a book about teachers making a difference in difficult times and tough places. But most importantly, this book reaffirms that being an

educator is inherently about adopting socially just practices, building community capacity and contributing to a more socially sustainable world.

The chapters are written by experienced teacher educators and bridge both theory and practice. The writers focus on the continuities, whilst setting them in the context of the changing curriculum. Underlying this section is the assumption that geography should not be considered in isolation from other subjects, but rather as part of a whole curriculum. Part Three concentrates on teaching and learning, and includes chapters on the use of maps, field work, IT and first hand experience within a community. The final section covers the issues associated with assessment, across the whole school age range. In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the

Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable

As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning. It will be particularly useful to those wishing to produce well-designed materials for teaching initial literacy via phonics, for teaching English as a foreign or second language, and for teacher training. English spelling is notoriously complicated and difficult to learn; it is correctly described as much less regular and predictable than any other alphabetic orthography. However, there is more regularity in the English spelling system than is generally appreciated. This book provides, for the first time, a thorough account of the whole complex system. It does so by describing how phonemes relate to

graphemes and vice versa. It enables searches for particular words, so that one can easily find, not the meanings or pronunciations of words, but the other words with which those with unusual phoneme-grapheme/grapheme-phoneme correspondences keep company. Other unique features of this book include teacher-friendly lists of correspondences and various regularities not described by previous authorities, for example the strong tendency for the letter-name vowel phonemes (the names of the letters) to be spelt with those single letters in non-final syllables. “One of the most vital and original novelists of her generation.”

Recent advances in the reach and technological sophistication of identification systems have been nothing less than revolutionary. Since 2000, over 60 developing countries have established national ID programs. Digital technology, particularly biometrics such as fingerprints and iris scans, has dramatically expanded the capabilities of these programs. Individuals can now be uniquely identified and reliably authenticated against their claimed identities. By enabling governments to work more

effectively and transparently, identification is becoming a tool for accelerating development progress. Not only is provision of legal identity for all a target under the Sustainable Development Goals, but this book shows how it is also central to achieving numerous other SDG targets. Yet, challenges remain. Identification systems can fail to include the poor, leaving them still unable to exercise their rights, access essential services, or fully participate in political and economic life. The possible erosion of privacy and the misuse of personal data,

especially in countries that lack data privacy laws or the capacity to enforce them, is another challenge. Yet another is ensuring that investments in identification systems deliver a development payoff. There are all too many examples where large expenditures—sometimes supported by donor governments or agencies—appear to have had little impact. Identification Revolution: Can Digital ID be Harnessed for Development? offers a balanced perspective on this new area, covering both the benefits and the risks of the identification revolution, as well
