Humanity is unified against the Inborns, an extraterrestrial species with godlike intelligence and abilities whose arrival on earth caused an environmental and

biological
crisis. Enslaved and
despised even by her
own Inbornkind,
18-year-old Snofrid
Yagami reawakens to
the world after having
her memories stolen
and is certain of only
one thing: she will do
anything to ensure her
freedom. But her
resolution is soon tested
when the son of a high-

ranking human official is murdered and her home city becomes the center of the interspecies war, one that might see the Inborns purged.

Desperate to find a way out of the city for herself and her family, Snofrid risks making a deal with the manipulative Inborn Commander, Hadrian,

and his brutal cadre of soldiers. Her task is simple: take part in a historic hunt that will bring wealth and fame to all who survive.

Unfortunately, Snofrid's role is one in which survival is rarely seen--the bait.

An engaging introduction to human and animal movement seen through the lens

of mechanics. How do Olympic sprinters run so fast? Why do astronauts adopt a bounding gait on the moon? How do running shoes improve performance while preventing injuries? This engaging and generously illustrated book answers these questions by examining human and animal

movement through the lens of mechanics. The authors present simple conceptual models to study walking and running and apply mechanical principles to a range of interesting examples. They explore the biology of how movement is produced, examining the structure of a muscle down to its microscopic force-

generating motors. Drawing on their deep expertise, the authors describe how to create simulations that provide insight into muscle coordination during walking and running, suggest treatments to improve function following injury, and help design devices that enhance human performance.

Here, too, are portions
