Over the last decade task-based approaches to language learning and teaching (TBLT) have become a global focus of increased levels of research. Governments around the world have turned to TBLT as a potential solution for curricula that lack authentic and meaningful engagement with language learning and are failing to motivate students as a result. This book focuses on Asia, where this shift has been particularly in evidence. TBLT has often been implemented in top-down approaches to curriculum development, which presents a huge range of challenges at the cultural as well as the pedagogic level. Contemporary Task Based Language Teaching in Asia looks at the drivers, stakeholders and obstacles across the region. Some countries have adapted TBLT to deal with the local constraints, others have found it hard to apply and many are still in the process of investigating its implementation in their specific contexts. This collection is important to all involved in language development, from curriculum reform to materials development. It assists from programme evaluation to the setting of assessment standards. The chapters cover all aspects of language education across Asia, from primary to tertiary, private and public education, as well as innovations at local, regional and national levels.

Do you spend entirely too much time correcting your students' papers? Do your students' essays and term papers take side trips to nowhere? Is their writing riddled with mechanical errors? Do their lab reports and essays lack specificity and clarity? Writing in the Content Areas, Second Edition is for middle and high school content area teachers who assign essays, term papers, lab reports, and other writing tasks to students. This book provides strategies and tips to help teachers of social studies, science, art, etc. improve the quality of students' writing and apply national and state curriculum standards in your classroom. The strategies in this book can be integrated easily into every teacher's daily plans. They will help your students improve their abilities to - reflect before writing - organize and classify - provide detail without padding - use technical terminology correctly - avoid unnecessary words - spell correctly - take useful notes while they read and during your lectures. This book will help teachers - get what they want from a writing task - frame their assignments more precisely - correct student papers more quickly and efficiently The new second edition offers activities and strategies which involve technology (word processing, presentation programming, the Internet, and e-communications), differentiated instruction, and brain-based learning. Quantitative corpus research on written language development has expanded rapidly in recent years, assisted by the ever-increasing power and accessibility of software capable of reliably analysing huge collections of learner writing. For this work to reach its full potential, it is important that researchers have a strong understanding of its methodological foundations and of the existing empirical evidence base on which it can build. This book provides the most comprehensive discussion to date of research in this area. Covering both first and second language learning contexts, it sets out a coherent theoretical framework and systematically reviews studies published over the last seventy years in order to establish what such research has taught us about written language development, what it hasn't taught us, and what we should do next. Timely and original, this is an essential reference work for academic researchers and students of first and second language writing.

Mindfulness can be used in the classroom as a method to increase overall teacher effectiveness, raise student achievement, and reignite the joy of teaching and learning. Mindfulness in the Classroom introduces eight mindful principles that support social and emotional learning for teachers and students in today's schools, leading to increased empathy, kindness, self-awareness, integrity, self-control, and honesty. The book provides an introduction and theoretical overview of mindfulness, followed by a discussion of the eight mindful principles. Research-based evidence is presented alongside differentiated teaching activities and classroom examples, helping to bridge the gap from theory to practice. Larger implications for school and society are also discussed, including a call to use these principles to teach the whole child. Mindfulness in the Classroom offers teachers and students a guide for the journey back to the heart of teaching and learning.

A skill that second language learners struggle to acquire is writing. This study is based on the Huebner (2008) study which findings indicated that there was no significant difference in the writing achievement of third-grade second language learners when they responded to writing prompts in writing journals and in a blog. A limitation of the Huebner (2008) study was that the participants had no prior keyboarding skills. Two research questions were explored. Will there be a difference in writing achievement between third-grade second language learners who participate in a three week training in keyboarding skills, compared to students who do not when they blog? "Will the use of blogs versus journals cause third-grade second language learners to write more words, use more sophisticated language, and have less grammatical and mechanical errors?" (Huebner, 2008, p. 4). Twenty-two third-grade second language learners and 2 native English speakers participated, 12 in the experimental and 12 in the control group. The experimental group was exposed to a three-week keyboarding training program. Both groups for three weeks answered 12 writing prompts 6 in their journal and 6 a blog. The results indicated that the experimental group had a higher word count when the word counts of only blog and blog and writing journal entries were added. However, the control group had a slightly higher writing rubric score. There was no significant difference in writing achievement. KEYWORDS: computers, keyboarding skills, second language learners, web 2.0 sites, weblogs (blogs), writing achievement

Chan's book explores the challenges in assessing experiential learning, deepens our understanding, and inspires readers to think critically about the purpose of assessment in experiential learning. Experiential learning has been studied and proven to be effective for student learning, particularly for the development of holistic competencies (i.e. 21st century skills, soft skills, transferable skills) considered essential for individuals to succeed in the increasingly global and technology-infused 21st century society. Universities around the world are now actively organising experiential learning activities or programmes for students to gain enriching and diversified learning experiences, however the assessment of these programmes tends to be limited, unclear, and contested. Assessment plays a central role in education policies and students' approach to learning. But do educators know how to assess less traditional learning such as service learning, entrepreneurship, cross-discipline or cross-cultural projects, internships and student exchanges? While the current assessment landscape is replete with assessments that measure knowledge of core content areas such as mathematics, law, languages, science and social studies, there is a lack of assessments and research that focus on holistic competencies. How do we assess students' ability to think critically, problem solve, adapt, self-manage and collaborate? Central to the discussion in this book, is the reason students are assessed and how they should be assessed to bring out their best learning outcomes. Offering a collection of best assessment practice employed by teachers around the world, this volume brings together both theoretical and empirical research that underpins assessment; and perceptions of different stakeholders - understanding of assessment in experiential learning from students, teachers, and policymakers. The idea of assessment literacy also plays an important role in experiential learning, for example, reflection is often used in assessing students in experiential learning but how reflection literate are educators, are they aware of the ethical dilemmas that arise in assessing students? These questions are discussed in detail. The volume also introduces a quality assurance programme to recognise student development within experiential learning programmes. The book will be particularly informative to academic developers, teachers, students and community partners who struggle with the development and assessment for experiential learning, those who plan to apply for funding in experiential learning, and policymakers and senior managements seeking evidence and advice on fine-tuning curricular, assessment designs and quality assurance.

"HELP! My Students Can't Write!" Why You Need a Writing Revolution in Your Classroom and How to Lead It. The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, TWR can make a dramatic difference. And the method does more than improve writing skills.

It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities *TWR is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.*

This practical book provides explicit instructions for teaching sentence-level skills to students who have difficulties in this area. The author explains the key role of sentence combining in the writing process and presents effective techniques for instruction and assessment. Numerous sample lessons, practice activities, planning tips, and grammatical pointers make it easy for teachers to incorporate sentence combining and construction into the writing curriculum at all grade levels (2-12). Accessible and engaging, the book helps teachers and students experiment with different ways to arrange thoughts and produce meaningful written work.
