The Academy

Cambridge Natural Science offers expert science content knowledge, combined with the experience and creativity of teachers who are actively giving English language and Science classes in Spain. The Pupil's Book provides 6 beautifully designed units presenting the contents of the Natural Science syllabus in an appealing and accessible way. Every lesson is based on a question: an enquiry-based approach for a better understanding of the concepts and the development of thinking skills. Extra help with language is included, along with help for the preparation of Cambridge Qualifications such as Young Learners. Specific sections deal with emotional competence and every unit starts with a mindfulness activity. Extra sections are included with stories, self-assessment and mini-projects. Spanish handwriting font is used throughout the book.
