

ATVs (Off Road Vehicles)

All-terrain vehicles (ATV), which are off-road motorized vehicles, usually with four tires, a straddle seat for the operator, and handlebars for steering control, have become increasingly popular. However, ATV fatalities and injuries have increased over the last decade and are a matter of concern to the Consumer Product Safety Comm. (CPSC), which oversees ATV safety, and to others. Many ATV crashes involving children occur when they are riding adult-sized ATVs. Manufacturers and dist have agreed to use their best efforts to prevent their dealers from selling adult-sized ATVs for use by children under the age of 16. This report examined: (1) how ATVs are used and the advantages of their use; and (2) the nature, extent, and costs of ATV crashes. Illus.

All-Terrain Vehicles (ATVs), which are off-road motorised vehicles, usually with four tires, a straddle seat for the operator, and handlebars for steering control, have become increasingly popular. All-Terrain Vehicles are mainly used for recreation, but are also used in occupations such as farming and policing. ATVs are also used as primary transportation in rural and remote communities, such as in parts of Alaska. However, ATV fatalities and injuries have increased over the last decade and are a matter of concern to the Consumer Product Safety Commission, which oversees ATV safety. This book explores how ATVs are used, their crash statistics, and sales of adult-sized vehicles for children's use. Also discusses how ATVs are used on forested lands and grasslands and their impact on natural resources.
