Motivational Interviewing for Clinical Practice teaches the reader how to use the critically important tool of motivational interviewing to promote health and well-being. Based on the theoretical framework of Miller and Rollnick, the book presents the latest models and techniques that the editors and authors have found helpful in their scholarship and clinical experience. Failure to adhere to recommended treatments is common across a wide range of illnesses -- from medical problems, such as hypertension or management of cardiovascular risk factors, to psychiatric disorders, including addiction. The methods and skills of motivational interviewing can be applied to any health behavior, be it giving up alcohol or cigarettes, taking medication for hypertension or high cholesterol, or changing dietary and exercise habits. *Motivational Interviewing for Clinical Practice* has many useful features: The book is organized along the four processes of motivational interviewing -- engaging, focusing, evoking, and planning -- which provides a consistent framework for enhanced understanding. The authors include numerous case examples with extensive illustrations of clinical dialogue that will be invaluable to both novices and

experts. The book explores the integration of motivational interviewing with other psychotherapies and the use of motivational interviewing with psychopharmacology. The authors also address special topics such as motivational interviewing in a diverse society and the teaching of motivational interviewing. Key points, references, and multiple-choice examination questions, along with explanations of the correct answers, are provided, as well as numerous clinical tools and summary tables to bring the material to life. For those looking for a quick general or board review on the topic, the multiple choice questions and answers are collected together in a special section for easy access, self-study, and review. Medical students new to motivational interviewing provide reflections on each chapter, focusing readers on the material deemed by their peers to be most useful to them in the future. Written for busy clinicians without specialized knowledge or expertise in behavior change, Motivational Interviewing for Clinical Practice provides straightforward, practical suggestions for working effectively with patients who suffer from substance use and other psychiatric disorders.

Always Be Yourself Unless You Can Be an Emergency Medicine Specialist
In a book sure to inspire controversy, Gene Heyman argues that conventional wisdom about addiction—that it is a disease, a compulsion beyond conscious control—is wrong. Drawing on psychiatric epidemiology, addicts’ autobiographies, treatment studies, and advances in behavioral economics, Heyman makes a powerful case that addiction is voluntary. He shows that drug use, like all choices, is influenced by preferences and goals. But just as there are successful dieters, there are successful ex-addicts. In fact, addiction is the psychiatric disorder with the highest rate of recovery. But what ends an addiction? At the heart of Heyman’s analysis is a startling view of choice and motivation that applies to all choices, not just the choice to use drugs. The conditions that promote quitting a drug addiction include new information, cultural values, and, of course, the costs and benefits of further drug use. Most of us avoid becoming drug dependent, not because we are especially rational, but because we loathe the idea of being an addict. Heyman’s analysis of well-established but frequently ignored research leads to unexpected insights

into how we make choicesÑfrom obesity to McMansionizationÑall rooted in our deep-seated tendency to consume too much of whatever we like best. As wealth increases and technology advances, the dilemma posed by addictive drugs spreads to new products. However, this remarkable and radical book points to a solution. If drug addicts typically beat addiction, then non-addicts can learn to control their natural tendency to take too much.

Motivation is key to substance use behavior change. Counselors can

support clients' movement toward positive changes in their substance use by identifying and enhancing motivation that already exists. Motivational approaches are based on the principles of person-centered counseling. Counselors' use of empathy, not authority and power, is key to enhancing clients' motivation to change. Clients are experts in their own recovery from SUDs. Counselors should engage them in collaborative partnerships. Ambivalence about change is normal. Resistance to change is an expression of ambivalence about change, not a client trait or characteristic. Confrontational approaches increase client resistance and discord in the counseling relationship. Motivational approaches explore ambivalence in a nonjudgmental and compassionate way.

The New York Times Bestseller What if everything you think you know about addiction is wrong? Johann Hari's journey into the heart of the war on drugs led him to ask this question--and to write the book that gave rise to his viral TED talk, viewed more than 62 million times, and inspired the feature film The United States vs. Billie Holiday and the documentary series The Fix. One of Johann Hari's earliest memories is of trying to wake up one of his relatives and not being able to. As he grew older, he realized he had addiction in his family. Confused, not knowing what to do, he set out and traveled over 30,000 miles over three years to discover what really causes addiction--and what really solves it. He uncovered a range of remarkable human stories--of how the war on drugs began with Billie Holiday, the great jazz singer, being stalked and killed by a racist policeman; of the scientist who discovered the surprising key to

addiction; and of the countries that ended their own war on drugs--with extraordinary results. Chasing the Scream is the story of a life-changing journey that transformed the addiction debate internationally--and showed the world that the opposite of addiction is connection.

inspired from biological observations of neural mechanisms; the power of evolution in nature in the diverse species that make up our world has been related to a particular form of problem solving based on the idea of survival of the fittest; similarly, artificial immune systems, ant colony optimisation, automated self-assembling programming, membrane computing, etc. also have their roots in natural phenomena. The first and second editions of the International Workshop on Nature Inspired Cooperative Strategies for Optimization (NICSO), were held in Granada, Spain, 2006, and in Acireale, Italy, 2007, respectively. As in these two previous editions, the aim of NICSO 2008, held in Tenerife, Spain, was to provide a forum where the latest ideas and state of the art research related to nature inspired cooperative strategies for problem solving were discussed. The contributions collected in this book were strictly peer reviewed by at least three members of the international programme committee, to whom we are indebted for their support and assistance.
