biggest questions in
higher education:

What are the proper
aims of the

should we conceive of
critical reflection, and
how should we teach
it to our students?

It expands upon themes concerned with esteem, self-esteem, emotional bonding between agents, expressive concerns, and moral requirements.

Economists have long assumed that value and price are synonymous and interchangeable. The authors show how

disregarding this false assumption and adopting an interdisciplinary approach could improve the economics profession by distinguishing economic values from ethical values.

Many academic authors incur debts in the production of their work, many of which are intellectual. I am no exception. One of my

intellectual debts is to
three remarkable books,
which formed the
starting point for my
thinking about norms.
The first of these books
is well known among
philosophers: David
Lewis' *Convention*. In
vintage Lewisian prose,
the book gives a lucid
and convincing
conventionalist analysis
of semantic norms. The

Govert den Hartogh's
Verwachtingen (Mutual
Expectations). Partly
because it was written in
Dutch - my native
tongue -partly because
of the occasionally
impenetrable style, it
never got the attention it
deserves. In that book,
Den Hartogh extends
Lewis' analysis of

semantic norms to moral norms. Den Hartogh introduced the notion of cooperative virtues that is the focus of much of this book. The third book is a book on economics, largely ignored by economists, which only lately has started to receive some recognition among philosophers: Robert Sugden's *The*
