Journey To Lean: Making Operational Change Stick

Responding to the demand by researchers and practitioners for a comprehensive reference, Handbook of Industrial and Systems Engineering offers full and easy access to a wide range of industrial and systems engineering tools and techniques in a concise format. Providing state of the art coverage from more than 40 contributing authors, many of whom a

management. An effective inventory control can significantly reduce the holding cost and hence, total production cost. Selecting and implementing a suitable production control system plays an important role in inventory reduction and performance improvement of a production system. Since the introduction of Toyota's just-in-time philosophy, pull control systems have been adopted by numerous companies worldwide, both in the manufacturing and service sectors. This book provides some recent developments in production management and presents modeling and analysis tools for pull production control systems. It contributes by combining theoretical findings and case

study analysis results with a practical and contemporary view on how to effectively manage and control production systems. Each chapter in this book focuses on a specific topic in production control systems, allowing readers to identify the chapters that relate to their interests. More specifically, the book is presented in three sections. The first section focuses on the design and implementation aspects of the pull production control systems, as well as performance evaluation approaches for pull systems. The second section presents a recent and comprehensive literature review. Three different case studies on implementation of pull production control systems are

presented in the last section. This book can be used as an essential source for students and scholars who need to specifically study the pull control systems. Since the superiority of these systems is controversial, the book can also provide an interesting and informative read for practitioners, managers, and employees who need to deepen their knowledge on pull production management systems.

The first part of this volume broadens the understanding of contemporary industrial policy in local, regional, national, and international contexts. The chapter by Wojnicka-Sycz (2020) undertakes one of the most important challenges in RIS3, i.e. the

evaluation of the impact of regional SS industries on the development of Polish regions. Based on the spatial panel models for 2012-2017, she reveals the positive impact of SS industries' employment dynamics on regional GDP per capita. The chapter responds to the research gap in a direct measurement of how SS areas affect regional development. The results provide the rationale for policy-makers to pursue these strategies further. The chapter contributes to regional New Industrial Policy by proving the efficiency of SS in strengthening regional performance. Factors and barriers to the development of smart mobility in mediumsized Polish cities are the focus of the chapter

by Kachniewska (2020). The author applies a comprehensive set of methods to tackle this issue and identifies the conditions for smart mobility, drawing primarily on expert opinions. The results enable a natural generalization of the identified determinants to the similar context of Polish towns, the more important that the research on medium cities is much rarer than studies on metropolises. This contribution belongs to the research streams of city governance and databased services, which are closely connected to and dependent on industrial digital transformation. Moreover, smart mobility addresses the objective of environmental protection, one of the crucial targets of

NIP. Godlewska-Dzioboń (2020) performs international comparisons between Central and Eastern European Countries in 2020–2018. Particularly, she focuses on the sectoral transformation of the employment structure in these countries. Besides the important observations of spatial dynamics in sectoral structures, the chapter points to the increased importance of services relative to manufacturing in contemporary structural transformations. Thus, it justifies the expanded scope of New Industrial Policy that encompasses not only industry, recently refreshed with 4.0 Revolution, but also services, particularly the digital ones. The chapter by Czech (2020) identifies

the impact of global debt on the national amounts outstanding of credit default swap contracts (CDS) in nonfinancial institutions. She finds the dynamics of the CDS notional amounts outstanding in response to global household indebtedness and total non-financial sector indebtedness in domestic banks. This contribution brings valuable practical insights about the core and dynamics of CDS and their usefulness in alleviating risks in international exchange. We find this input particularly relevant for industries and enterprises operating in global value chains. Widera (2020) performs a spatial analysis of the induced population potential of the communes in the Opolska

region in 2000 and 2018. The econometric analysis revealed both the own potential of the communes and the interactions with neighboring communes to develop this potential. These findings are important to theorize about the bottom-level sources of territorial units' potential, both internal and those stemming from spatial interactions. We find these conclusions relevant to understand local-level origins of regional transformations, as well as interdependencies among local territorial units. The next two parts of this volume present micro-level and bottomup contexts for industrial policy. Particularly, these are the insights from management and business research and from the

research on governing various stakeholder interests and networks. In the second part, based on management and business theory and empirical evidence, the authors discuss human resource and technological challenges faced by the contemporary industry. Potoczek (2020) performs a bibliometric research to recognize the advancement of the process approach in organizations. She finds the research on process improvement as emerging. The major research community in that area belongs to the IT field, while management researchers are still a minor group. The author recommends the increased interest from the management field as conducive to the 4.0

transformation of organizational processes. These results provide policy-relevant input to the understanding of how academic research tackles digital transformation in organizational processes. The chapter by Igielski (2020) uses a survey among a sample of large enterprise senior managers headquartered in Poland to check whether and how they develop employee skills for the challenges of Industry 4.0. The results are pessimistic since they reveal the lack of adaptive and developmental actions in this regard. Nevertheless, there is also a positive sign, namely the awareness of the challenges posed by the 4.0 revolution. Thus, the chapter is valuable for the

recommendations as to competence development in industrial transition to the digital economy. Flak (2020) presents an interesting test for the system of organizational terms as to its usefulness in the practice of motivating people and in a dedicated software. Based on a research experiment in real-life business settings, the author proves the applicability of theory-driven organizational terms in software applications supporting managers in their motivating functions. The chapter contributes important observations as to the interrelations among managerial and technological resources in motivating employees. Sztorc (2020) investigates lean

management tools at hotels in Poland, based on a large sample of hotel representatives. The results are helpful in understanding the types of lean management tools, as well as their major targets in the researched organizations. The input of the study rests in filling the research gap as to the particular tools of lean management applied in the hotel industry to improve services and processes. The focus of this chapter on a particular industry provides a relevant basis for further application and upgrading of this service sector. The chapter by Mazurkiewicz (2020) offers an assessment of the impact of national culture on career orientation and career values among Polish

and Chinese students of economics. Surprisingly, the value system does not differ much between the two national samples, despite the distinct characteristics of the two national cultures, according to Hofstede's method. Consequently, the author assumes national culture as moderator of career values rather than their determinant. These results provide a contribution to the understanding of job motivations among future corporate employees, a critical determinant of all industrial transitions. Kowalik (2020) investigates the economic benefits perceived by student participants of scientific projects. Based on the survey, the author reveals students' recognition of scientific projects as

bringing economic effects. The study offers practical implications for young people engaging in research activities, as well as for research policy that might acknowledge additional important outcomes, besides purely scientific objectives. The third part discusses how governing networks and interests can ensure sustainable and socially responsible industries and enterprises. Sectoral and industrial collaborations are supposed to enhance industrial convergence (EOCIC, 2019). In this vein, Lis (2020) focuses on collaborative attitudes in clusters and technological parks. Cluster organizations are established to rip the localization and agglomeration economies, as well as synergies

from cooperative links. Despite some history of operations, the surveyed Polish cluster initiatives and technology parks still reveal low development of enterprise cooperation. The author suggests self-evaluation of management and participants of the researched organizations to understand the accomplished level of collaboration and derive practical implications. This contribution is important to understand the performance of some organizational measures of industrial policy and their real input to industrial transformation. The chapter by Kowalczyk (2020) investigates sociocultural conditions of CSR-practices in the construction industry of selected

European countries. Based on a survey with a large convenience sample, the author confirms the strength of stakeholder pressure on CSR practice as well as the mediating role of company culture in this relationship. At the same time, country differences were indicated as significant for CSR practice and worth further explanation of its variance. This study is valuable for the explanation of interests and stakeholder pressure affecting a particular industry, thus determining the development conditions of that industry. Another industry-specific study has been proposed by Kurzak-Mabrouk (2020), who focuses on food businesses. This chapter addresses the critical strategic direction of

NIP that refers to sustainable and responsible growth with regard to environmental protection. The author performed the interviews with top and middle managers of a large representative sample of Polish food companies. The findings are optimistic, since the majority of companies undertake the efforts towards comprehensive sustainable development strategies voluntarily, and not only due to legal enforcement. Still, the researched enterprises do not fully apply these strategies as yet. Resonating with the study by Lis (2020), Flieger (2020) identifies network types according to the collaboration maturity level in a local government unit. The research on collaborative

networks in public organizations still remains unique. Therefore, this study fills the research gap. The author uses a casebased approach to identify the network features that change according to the maturity level of relationships. The findings are useful for the practice of developing collaboration in local governments and contribute to our understanding of the context for industrial development.

This book will help you learn both the how of doing lean, as well as the why behind the tools, enabling you to become lean. Lean is the most important business model for competitive success today. Yet companies still struggle to sustain enduring and deep-rooted business success from their lean implementation efforts. The most important problem for these

companies is becoming lean: how can they advance beyond realizing isolated gains from deploying lean tools, to fundamentally changing how they operate, think, and learn? In other words, how can companies learn to go beyond lean turnaround to achieve lean transformation? The Lean Manager: A Novel of Lean Transformation, by lean experts Michael and Freddy Ballé, addresses this critical problem. As we move from what Jim Womack, author, lean management authority, and LEI founder, calls "the era of lean tools to

"The only way to become and stay lean is to produce lean managers," says Womack. "Every isolated effort will recede—or fail—unless companies learn to use the lean process as a way of developing individual problem-solvers with the ownership, initiative, and know-how to solve problems, learn, and ultimately

He learns how to use tools to unleash the creativity and motivation of people, so they learn how to solve problems as well as coach and

value requires companies to address issues that relate to pollution and waste, created by industrialization; to respond in a transparent manner to the challenges increasingly raised by the civil society, namely NGOs; to invest in emerging technologies that provide innovative solutions to many of today's environmental problems; and to effectively respond to the challenges of increased poverty and inequality around the globe. On the other hand, to create shareholder value, managers must focus not only on cost

reduction and risk control, but also on fostering innovation, enhancing corporate reputation within external stakeholders, and establishing a credible growth path for the future. The current global financial crisis has left few untouched: unprecedented unemployment figures, public deficits, bankruptcies, redundancies, austerity regimes, and governments bailing out banks all over the globe. World confidence is at a record low. How can management scholars encounter solutions for the dilemmas created by this scenario

methodological perspective, thereby avoiding a strongly "technological" approach, rather focusing on the presentation of methods and instruments. Its basis is a tried and tested framework model that can be understood as the ideal management cycle of digital business engineering. The control loop consists of goal-setting (Chapter 1: Setting a Business Strategy), implementation (Chapters 2–5), and success assessment (Chapter 6: Validating the Success of Business Transformation) and is located in

an outer circuit. The operational implementation phases of digital business engineering are part of the inner cycle: Defining a Business Case (Chapter 2), Eliciting the Business Processes (Chapter 3), Deriving the Business Requirements (Chapter 4), and Transforming the Business Architecture (Chapter 5). The book follows a didactic structure: Each chapter includes learning objectives, summaries, and repetition questions with solutions that can help the reader to reassure themselves and strengthen their knowledge.

Users who want to familiarise themselves with the field of digital business engineering thus have material at their disposal that is ideal for self-study. But these modules can also help experienced digital business engineers to deepen their knowledge in their organisation and to strengthen their overall methodological competence.

and relevant industry specialists and practitioners. As a result, the authors present current research interests across the breadth of Australia – with many of the perspectives demonstrating relevance to practice globally. The research perspectives presented here focus on four key themes of project management theory and practice: people and organisations; methodologies and practice domains; issues in application; and continuous improvement and benchmarking. Collectively, this work will be of particular interest to project management academics and researchers, post-graduate students, and the broader project management community. Much of current management literature focuses on a limited set of 'classical' value levers, such as cost reduction, sales optimization or mergers & acquisitions, thus neglecting another core value lever: capital investments. That capital investments receive such limited attention is all the more surprising when one considers how vitally important they are to the economy as a whole as well as individual businesses. There is significant value-creation potential in optimizing capital investments. Investments not only determine the asset structure of a venture. They also enable the introduction of new

Without Lean leaders, there can be no Lean. If an organization wants to be Lean, its leaders must lead using Lean principles. Put another way, until the top of your organization fully embraces Lean, the rest of your organization will never be Lean. The Lean Leader: A Personal Journey of Transformation uses a compelling novel format to tackle the nuts and bolts of leading a Lean transformation. Readers follow along as the characters face real crises and what seem to be unreasonable deadlines. As the story progresses, readers will see how the main character, Don, and his colleagues transform from being

"command and control" autocrats—those who make decisions and bark orders—to more Socratic coaches and mentors. As Don and his staff come to realize that the folks they employ are the real experts in the processes they control, you will learn why it behooves you to do more asking than telling. You will come to realize that a leader's greatest skill must be in coaching great performance from their people. You will also witness the difference between managing and leading. After reading this book, you will understand why it's so important to shed the decision-making tasks that have cluttered your days, and how

to delegate those decisions to employees who are closer to the action. You will learn how important it is to look over the horizon to identify upcoming challenges, define and communicate new courses of action, and compel others to follow. Most importantly, you will learn exactly what it takes to lead a Lean organization that thrives socially, as well as financially.

Most Lean practitioners learn about the three Ms: muda (waste), mura (unevenness or variability), and muri (overburden), and beginners in Lean generally focus on the removal of muda. The impact of muri is not as readily understood. It is extremely significant, however, for those working in government. Decisions on staffing levels and resource allocation are made

by elected officials who are generally disconnected from daily operations. Short-sighted cost-cutting makes it difficult to deliver quality services as efficiently as possible. The mantra of "do more with less" creates ever-increasing muri. In contrast to robust Lean programs in privately owned companies, efficiency initiatives are regularly cut from public-sector budgets. Antiquated systems remain in place, with too few workers to operate the existing processes. The debilitating impact of persistent muri brings burnout and turnover, perpetuating a vicious cycle. Despite the muri, a dedicated cadre of public
