**This book examines the energy dimension of the smart city from the perspective of urban planning, providing a complete overview that ranges from theoretical aspects to practical considerations and projects. In addition, it aims to illustrate how the concept of the smart city can enhance understanding of the urban system and foster new forms of management of the metropolis, including with respect to energy supply and use. Specifically, the book explores the different dimensions of the relationship between energy and the city, discusses methodological issues with a special focus on ontological approaches to sustainability, and describes practices, tools, and good examples of energy-related urban planning. The authors represent the main Italian research groups working in the field, Italy being an excellent example of a country exposed to energy problems due to, for example, vulnerability to climate change and lack of primary energy resources. This book will be valuable for students of urban planning, town planners, and researchers interested in understanding the changing nature of the city and the challenges posed by energy issues.**

**In sixteen spirited essays, Pulitzer Prize-winning novelist Alison Lurie, who is also one of our wittiest and most astute cultural commentators, explores the world of children's literature--from Lewis Carroll to Dr. Seuss, Mark Twain to Beatrix Potter--and shows that the best-loved children's books tend to challenge rather than uphold respectable adult values.**

**Technology has long been an essential consideration in public discussions of the environment, with the focus overwhelmingly on creating new tools and techniques. In more recent years, however, activists, researchers, and policymakers have increasingly turned to mobilizing older technologies in their pursuit of sustainability. In fascinating case studies ranging from the Early Modern secondhand trade to utopian visions of human-powered vehicles, the contributions gathered here explore the historical fortunes of two such technologies—bicycling and waste recycling—tracing their development over time and providing valuable context for the policy successes and failures of today.**

In the 1990s, Anne Meyer, David Rose, and their colleagues at CAST introduced universal design for learning (UDL), a framework to improve teaching and learning. Universal Design for Learning: Theory & Practice includes: \* New insights from research on learner differences and how human variability plays out in learning environments \* Research-based discussions of what it means to become expert at learning \* First-hand accounts and exemplars of how to implement UDL at all levels and across subjects using the UDL Guidelines \* "Dig Deeper" segments that enrich the main content \* Dozens of original illustrations and access to videos and other online features at <http://udltheorypractice.cast.org> \* Opportunities to participate in a UDL community

The excitement of the brilliantly innovative book is that it challenges the reader to revise his concept of order—and to consider the seemingly disparate problems of the individual personality and the urban society in the light of a fresh, unified framework that has the shock of new truth. Drawing on recent ideas in psychology, sociology, and urban history, Sennett shows how the excessively “ordered” community freezes adults—both the fierce young idealists and their security-oriented parents—into rigid attitudes that originate in adolescence and stifle further personal growth. He explains how the accepted ideal of order generates patterns of behavior among the urban middle cases that are stultifying, narrow, and violence-prone. He

demonstrates that most city planning has been conducted with the same rigidity, and shows, in specific and human terms, why that approach has not solved and cannot solve our cities problems. *The Uses of Disorder* is not only a critique of the ways in which the affluent city has failed as a place where the individual—even the affluent individual—can grow. It is also an exploration of new modes of urban organization through which city life can become richer and more life-affirming. The author proposes and projects in concrete terms (including a new use of the police) a functioning city that can incorporate anarchy, diversity, and creative disorder to bring into being adults who can openly respond to and dealt with the challenges of life. Thus, Richard Sennett, more aware of the nature of human nature than most Utopians of the past, sees progress in the creation of new urban relationships that will protect, not stability, but diversity and change. Out of his books, with its free and imaginative insights grounded in a strong sense of present-day realities, emerges the vision of a fully affluent and libertarian society—an arena that will welcome a rich variety of individuals, and accept the conflict that stem from such variety as not merely inevitable but life-giving.

From the rise of terrorism to the uncertainties associated with economic crisis and recession, our age is characterized by fear. Fear is the expression of a society on unstable foundations. Most of us feel that our social status is under threat and our future prospects in jeopardy. We are overwhelmed by a sense of having been

catapulted into a world to which we no longer belong. Tracing this experience of fear, Heinz Bude uncovers a society marked by disturbing uncertainty, suppressed anger and quiet resentment. This is as true in our close relationships as it is in the world of work, in how we react to politicians as much as in our attitudes towards bankers and others in the financial sector. Bude shows how this fear is not derived so much from a 'powerful other' but rather from the seemingly endless range of possibilities which we face. While this may seem to offer us greater autonomy and freedom, in reality the unknown impact and meaning of each option creates a vacuum which is filled by fear. What conditions lead people to feel anxious and fearful for themselves and others? How can individuals withstand fear and develop ways of making their fears intelligible? Probing these and other questions, Bude provides a fresh analysis of some of the most fundamental features of our societies today.

Processes of multi-scalar regional urbanization are occurring worldwide. Such processes are clearly distinguishable from those of the nineteenth and twentieth centuries due to the shifting concepts of both the city and the metropolis.

International literature highlights how what we have historically associated with the idea of cities has long been subjected to consistent reconfiguration, which involves stressing some of the typical features of the idea of "cityness". Post-Metropolitan Territories: Looking for a New Urbanity is the product of a research project funded by the Italian Ministry for Education, Universities and Research (MIUR). It constitutes a

thorough overview of a country that is one of Europe's most diverse in terms of regional development and performance: Italy. This book brings together case studies of a number of Italian cities and their hinterlands and looks at new forms of urbanization, exploring themes of sustainability, industrialization, de-industrialization, governance, city planning and quality of life. This volume will be of great interest to academics and students who study regional development, economic geography and urban studies, as well as civil servants and policymakers in the field of spatial planning, urban policy, territorial policies and governance.

The Myth of the Nation in the Twentieth Century

Bedside Manners

La Grande Italia traces the history of the myth of the nation in Italy along the curve of its rise and fall throughout the twentieth century. Starting with the festivities for the fiftieth anniversary of the unification of Italy in 1911 and ending with the centennial celebrations of 1961, Emilio Gentile describes a dense sequence of events: from victorious Italian participation in World War I through the rise and triumph of Fascism to Italy's transition to a republic. Gentile's definition of "Italians"

encompasses the whole range of political, cultural, and social actors: Liberals and Catholics, Monarchists and Republicans, Fascists and Socialists. *La Grande Italia* presents a sweeping study of the development of Italian national identity in all its incarnations throughout the twentieth century. This important contribution to the study of modern Italian nationalism and the ambition to achieve a “great Italy” between the unification of Italy and the advent of the Italian Republic will appeal to anyone interested in modern European history, Fascism, and nationalism. How can the social sciences help us to understand the past, present and potential futures of cycling? This timely international and interdisciplinary collection addresses this question, discussing shifts in cycling practices and attitudes, and opening up important critical spaces for thinking about the prospects for cycling. The book brings together, for the first time, analyses of cycling from a wide range of disciplinary backgrounds, including history, sociology, geography, planning, engineering and technology. The book redresses the past neglect of cycling as a topic for sustained analysis by treating it as a varied and complex practice which matters greatly to contemporary social, cultural and political theory and action.

Cycling and Society demonstrates the incredible diversity of contemporary cycling, both within and across cultures. With cycling increasingly promoted as a solution to numerous social problems across a wide range of policy areas in car-dominated societies, this book helps to open up a new field of cycling studies.

Witness the French anthropologist as we have never seen him before. Marc Augé coined the term “non-place” to describe the ubiquitous airports, hotels, and motorways filled with anonymous individuals. In this new book, he casts his anthropologist’s eye on a subject close to his heart: cycling. With *In Praise of the Bicycle*, Augé takes us on a two-wheeled ride around our cities and on a personal journey into ourselves. We all remember the thrill of riding a bike for the first time and the joys of cycling. Here he reminds us that these memories are not just personal, but rooted in a time and a place, in a history that is shared with millions of others. Part memoir, part manifesto, Augé’s book celebrates cycling as a way of reconnecting with the places in which we live, and, ultimately, as a necessary alternative to our disconnected world.

This is the first history of the bicycle to trace not only the technical background to its invention, but also to contrast its social and cultural impact in different parts of the world, and assess its future as a continuing global phenomenon.

Translated by Thomas McQuillan Architecture is a manifestation of the environment in which it is placed, observes distinguished architect and theoretician Christian Norberg-Schulz. A simple enough observation, but one that becomes subtle and nuanced in this landmark book which attempts to define, for the first time, what Nordic building really is. Norberg-Schulz begins by contrasting the natural world of the North with that of the Mediterranean, the Nordic unendingness against the sun-saturated and homogeneous South. Using themes such as "natural," "domestic," "universal," and "foreign," he finds the architecture of both regions sensibly related to their environments; but whereas the South lends itself to abstraction, the North is marked by variation, openness, and dynamism—by low light, forests, and space. Exploring the ways built

experience "takes place," Norberg-Schulz charts the distinctive character of land and climate that distinguishes Denmark's, Sweden's, Finland's, and Norway's architectural traditions from each other and from those to the South. While each of these countries might be said to share regional traits, Norberg-Schulz identifies differences (the cultivated and closely detailed landscape and architecture of Denmark, the dramatic, structured forms of Norway) that allow him to account for the way individual Nordic architectures evolved.

Also available as an e-book The book argues that the decision-making processes within international organizations and other global governance bodies ought to be subjected to procedural and substantive legal constraints that are associated domestically with the requirements of the rule of law. The book explains why law — international, regional, domestic, formal or soft — should restrain global actors in the same way that judicial oversight is applied to domestic administrative agencies. It outlines the emerging web of global norms designed to protect the rights and interests of all affected individuals, to enable public deliberation, and to promote the legitimacy of the global bodies. These norms are being shaped by a growing convergence of expectations of global institutions to ensure

public participation and representation, impartiality and independence of decision-makers, and accountability of decisions. The book explores these mechanisms as well as the political and social forces that are shaping their development by analysing the emerging judicial practice concerning a variety of institutions, ranging from the UN Security Council and other formal organizations to informal and private standard-setting bodies. The book consists of two parts. In the first we attempt to define the concept of "welfare space", discussing the current state of the concept. In the second instead, we analyze the spatial results of the welfare policies that have been enacted in the Veneto central area and we develop some projects that try to reimagine the contemporary city in greater totality, defining the conditions for new life cycles for the contemporary territory. In cities throughout the world, bicycles have gained a high profile in recent years, with politicians and activists promoting initiatives like bike lanes, bikeways, bike share programs, and other social programs to get more people on bicycles.

Bicycles in the city are, some would say, the wave of the future for car-choked, financially-strapped, obese, and sustainability-sensitive urban areas. This book explores how and why people are reconsidering the bicycle, no longer thinking of it simply as a toy or exercise machine, but as a potential solution to a number of contemporary problems. It focuses in particular on what reconsidering the bicycle might mean for everyday practices and politics of urban mobility, a concept that refers to the intertwined physical, technological, social, and experiential dimensions of human movement. This book is for Introductory Anthropology, Cultural Anthropology, Cultural Sociology, Environmental Anthropology, and all

undergraduate courses on the environment and on sustainability throughout the social sciences.

These volumes bring to a close the only comprehensive edition of the surviving correspondence of William Morris (1834-1896), a protean figure who exerted a major influence as poet, craftsman, master printer, and designer. Volumes III and IV, taken together, give in detail the comments and observations that articulate his problematic political and artistic stands and equally problematic position within the aesthetic movement as it developed in the 1890s. Most eloquently voiced also are the complexities of his troubled marriage and his devotion to his epileptic daughter, Jenny, and his other daughter, May. But dominating all these themes, organizing and structuring them, are the Kelmscott Press and the building of Morris's important library of medieval manuscripts and early printed books. The letters record the way in which the Press becomes not only the center of Morris's aesthetic ambitions and achievements but also the site for his closest human relations and for much of his connecting with the makers of early modernism. The letters in Volumes III and IV are thoroughly annotated, and through texts and notes provide a new assessment of Morris's career. Included also, as appendices to Volume IV, are two important documents: the first, never before published, is F. S. Ellis's Valuation List of Morris's library, made after Morris's death, and the second, never before reprinted, is the text of what was to be Morris's final essay on socialism, published in April 1896. Originally published in 1995. The Princeton Legacy Library uses the latest print-on-demand technology

These paperback editions preserve the original texts of these important books while presenting them in durable paperback editions. The cultural and material legacies of the Roman Republic and Empire in evidence throughout Rome have made it the "Eternal City." Too often, however, this patrimony has caused Rome to be seen as static and antique, insulated from the transformations of the modern world. In *Excavating Modernity*, Joshua Arthurs dramatically revises this perception, arguing that as both place and idea, Rome was strongly shaped by a radical vision of modernity imposed by Mussolini's regime between the two world wars. Italian Fascism's appropriation of the Roman past—the idea of Rome, or *romanità*—encapsulated the Fascist virtues of discipline, hierarchy, and order; the Fascist "new man" was modeled on the Roman legionary, the epitome of the virile citizen-soldier. This vision of modernity also transcended Italy's borders, with the Roman Empire providing a foundation for Fascism's own vision of Mediterranean domination and a European New Order. At the same time, *romanità* also served as a vocabulary of anxiety about modernity. Fears of population decline, racial degeneration and revolution were mapped onto the barbarian invasions and the fall of Rome. Offering a critical assessment of *romanità* and its effects, Arthurs explores the ways in which academics, officials,

and ideologues approached Rome not as a site of distant glories but as a blueprint for contemporary life, a source of dynamic values to shape the present and future.

Americans have been riding bikes for more than a century now. So why are most American cities still so ill-prepared to handle cyclists? James Longhurst, a historian and avid cyclist, tackles that question by tracing the contentious debates between American bike riders, motorists, and pedestrians over the shared road. *Bike Battles* explores the different ways that Americans have thought about the bicycle through popular songs, merit badge pamphlets, advertising, films, newspapers and sitcoms. Those associations shaped the actions of government and the courts when they intervened in bike policy through lawsuits, traffic control, road building, taxation, rationing, import tariffs, safety education and bike lanes from the 1870s to the 1970s. Today, cycling in American urban centers remains a challenge as city planners, political pundits, and residents continue to

argue over bike lanes, bike-share programs, law enforcement, sustainability, and public safety. Combining fascinating new research from a wide range of sources with a true passion for the topic, Longhurst shows us that these battles are nothing new; in fact they 're simply a continuation of the original battle over who is - and isn ' t - welcome on our roads. The car was first introduced in British society over 100 years ago. This study offers a radical way of looking at the history of motoring; focusing on issues of class, gender and consumption, the author argues that the technology and use of the motor car was hugely influenced by the way it was adopted by society in the first year of its history.

**The key aim of this volume is to demonstrate ways in which an understanding of history can be used to inform present-day transport and mobility policies. This is not to say that history repeats itself, or that every contemporary transport dilemma has an historical counterpart: rather, the contributors to this book argue that in many contexts of transport planning a better understanding of the context and consequences of past decisions and processes could lead to more effective policy decisions. Collectively the authors explore the ways in which the methods and approaches of historical research may be applied to contemporary transport and policy issues across a wide range of transport modes and contexts. By linking two bodies of academic research that for the most part**

**remain separate this volume helps to inform current transport and mobility policies and to stimulate innovative new research that links studies of both past and present mobilities.**
