This book presents a comprehensive overview of fundamental issues and recent advances in graph data management. Its aim is to provide beginning researchers in the area of graph data management, or in fields that require graph data management, an overview of the latest developments in this area, both in applied and in fundamental subdomains. The topics covered range from a general introduction to

Bookmark File PDF Microsoft Publisher 2002 (Benchmark Series)

graph data management, to more specialized topics like graph visualization, flexible queries of graph data, parallel processing, and benchmarking. The book will help researchers put their work in perspective and show them which types of tools, techniques and technologies are available, which ones could best suit their needs, and where there are still open issues and future research directions. The chapters are contributed by leading experts in the relevant areas, presenting a coherent overview of the state of the art in the field. Readers should have a basic knowledge of data management techniques as they are taught in computer science MSc programs.

This holistic guide explains how school librarians and teachers can successfully integrate relevant health concepts and life skills throughout the curriculum for students K through 12.

- 15 original line drawings illustrating health issues, plus many images drawn from major image collections such as the National Library of Medicine and the Library of Congress
- Extensive bibliographies of material that can be used to teach health issues, including selected listings of major health textbooks used in the United States and Canada
- List of helpful selection aids and sources for online health information sites

The 9th East-European Conference on Advances in Databases and Information Systems was held on September 12 – 15, 2005, in Tallinn, Estonia. It was organized in a cooperation between the Institute of Cybernetics at Tallinn University of Technology, the Department of Computer Engineering of Tallinn University of Technology, and the Moscow chapter of

ACM SIGMOD. The main objective of the ADBIS series of conferences is to provide a forum for the dissemination of excellent research accomplishments and to promote interaction and collaboration between the Database and Information Systems research communities from Central and East European countries and the rest of the world. The ADBIS conferences provide an international platform for the presentation of research on database theory, the development of advanced DBMS technologies, and their advanced applications in particular in information systems. The 2005 conference continued the ADBIS conferences held in St. Petersburg (1997), Poznan (1998), Maribor (1999), Prague (2000), Vilnius (2001), Bratislava (2002), Dresden (2003), and Budapest (2004). The conference consisted of regular sessions with technical contributions reviewed and selected by an international

Program Committee, as well as of invited talks and tutorials given by leading scientists. For the first time the ADBIS conferences had a satellite event, a workshop on data mining and knowledge discovery. The ADMKD 2005 workshop, with its own international Program Committee as well as proceedings, served as a forum to encourage researchers and practitioners to discuss and investigate data mining research and implementation issues, and to share experience in developing and deploying data mining systems.

The Sociology of Reviews

The ship has left the Miraflores

Locks, let loose from the 'mules' run by the crews of the Panama Canal Commission. She has picked up speed while passing under the Bridge of the Americas which links de facto the Northern and Southern parts of the continent, and has headed resolutely towards the Pacific Ocean waters along the rows of boats of all kinds waiting to cross the Canal in the other direction. Through a layer of tropical clouds, the setting Sun is bleakly illuminating the tall white highrises of Panama City on the port side. It took a full day to cautiously move through the whole system of locks and cuts. Back in the stateroom, I open again a working copy of this book and type down this foreword on

the pocket computer. The last chapter was received the day before while speeding through the Caribbean Sea and my main work as Editor is now over. It has been a real pleasure and a great honour to be given the opportunity of compiling this book and interacting with the various contributors through the latest technologies while being sometimes in geographically very different places. The quality of the authors, the scope of experiences they cover, the messages they convey make of this book a unique and timely publication. The reader will certainly enjoy as much as I did going through such a variety of well-inspired chapters from so many different horizons.

Critics, Ratings, and Society is the first comprehensive study of the review as social institution. Its theories and data encompass reviews of all types of products--including the arts (e.g. theater, books, and music) and consumer products (e.g. cars, software, and appliances). According to Blank, the core problem of reviews is credibility. Concerns about credibility organize the formulation of reviews and audiences. The connoisseurial-procedural distinction describes the production of credibility and its assessment under different types of rating systems. A concise introduction to the fundamentals of working with MySQL. MySQL is an open-source

relational database management system that is rapidly growing in popularity. Known for its speed, reliability, and ease of use, MySQL has proven itself to be particularly well suited both for beginners and for experienced developers to create sophisticated database-backed Web sites and applications. MySQL Tutorial is a clear, concise introduction to the fundamental concepts and techniques of working with MySQL. It teaches the beginning MySQL user how to create and administer powerful databases that can be used at home, at work, and on the Web.
