Income and Wealth

The behaviour of market prices is a fascinating subject for researchers. Opinions vary substantially. from the view that prices accurately and quickly reflect relevant information to the other extreme that prices are not rationally determined and are hence to some degree predictable. This diversity of belief about the efficiency of markets is reflected in these proceedings of the NATO Advanced Research Workshop on "A reappraisal of the efficiency of financial markets".

The thirty-one workshop papers cover stock, currency and commodity markets. We are pleased to have contributions on markets in eleven NATO countries: Belgium, Canada, Denmark, France, Germany, Greece, Italy, the Netherlands, Portugal, the United Kingdom and the United States. The workshop papers thus provide a wide-ranging account of contemporary research into financial markets worldwide. The workshop was held at the Hotel do Mar, Sesimbra, Portugal from April 11th to April 15th, 1988. We record our gratitude to Jose Cabral for

We are now living in a period of disillusion in the ability of economic policy to stabilise the economy. This is proven by the onset of severe world recession in the early 1980s and the inability to invert the negative phase of the business cycle under way in the industrialized countries in the early 1990s. The failure of old policies motivates the research into the causes of economic fluctuations and their measurement whose results are published in this volume This book highlights a

selection of the best papers presented at the 2016 SIEV conference "The Laudato sì Encyclical Letter and Valuation. Cities between Conflict and Solidarity, Decay and Regeneration, Exclusion and Participation", which was held in Rome, Italy, in April 2016, and brought together experts from a diverse range of fields - economics, appraisal, architecture, energy, urban planning, sociology, and the decision sciences - and government representatives. The book is divided into four parts:

Processes. Cities are where

72% of all Europeans live,

and this percentage is

expected to rise to 80% by

2050. Given this trend

towards urbanization, cities

are continuously growing,

which also entails a growing

risk of social segregation,

lack of security and

mounting environmental

***problems. All too often,
today's cities have to cope
with social and
environmental crises,
shifting the European urban
agenda towards
regeneration processes.
Urban regeneration is more
complex than merely
renovating existing
buildings, as it also involves
social and environmental
problems, inhabitants'
quality of life, protecting
tangible and intangible
cultural resources,
innovation and business.

income inequality of Eastern European Countries under socialism. New models on income and wealth distribution are specified and their corresponding properties and goodness of fit are discussed. A multivariate approach to the measurement of poverty is developed and applied, and a compact survey of the literature is presented. The book can be used as a text in advanced undergraduate and graduate courses dealing with the theory, model specifications, methods and applications of income and wealth distribution, income inequality and poverty assessment in measurement and the use of SAMs in the analysis of income distribution.

In recent years, analysts, researchers and environmental policy makers have been faced with a serious shortage of empirical data on environmental phenomena. In fact, the information gathered by various organisations has not yet been systematically classified into a consistent system of accounts. This book presents the results of a joint research effort by the Fondazione Eni Enrico Mattei and Italy's Central Statistical Office (ISTAT) to
