The annual International Conference on Global Security, Safety and Sustainability (ICGS3) is an established platform in which security, safety and sustainability issues can be examined from several global perspectives through dialogue between academics, students, government representatives, chief executives, security professionals, and research scientists from the United Kingdom and from around the globe. The three-day conference focused on the challenges of complexity, rapid pace of change and risk/opportunity issues associated with modern products, systems, special events and infrastructures. The importance of adopting systematic and systemic approaches to the assurance of these systems was emphasized within a special stream focused on strategic frameworks, architectures and human factors. The conference provided an opportunity for systems scientists, assurance researchers, owners, operators and maintainers of large, complex and advanced systems and infrastructures to update their knowledge on the state of best practice in these challenging domains while networking with the leading researchers and solution providers. ICGS3 2010 received paper submissions from more than 17 different countries in all continents. Only 31 papers were selected and were presented as full papers. The program also included a number of keynote lectures by leading researchers, security professionals and government representatives.

**The safe and secure operation of computer systems continues to be the major issue in many applications where there is a threat to people, the environment, investment or goodwill. Such applications include medical devices, railway signalling, energy distribution, vehicle control and monitoring, air traffic control, industrial process control, telecommunications systems and many others. This book represents the proceedings of the 16th International Conference on Computer Safety, Reliability and Security, held in York, UK, 7-10 September 1997. The conference reviews the state of the art, experience and new trends in the areas of computer safety, reliability and security. It forms a platform for technology transfer between academia, industry and research institutions. In an expanding world-wide market for safe, secure and reliable computer systems SAFECOMP 97 provides an opportunity for technical developers, users and legislators to exchange and review the experience, to consider the best technologies now available and to identify the skills and technologies required for the future. The papers were carefully selected by the Conference International Programme Committee. The authors of the papers come from twelve different countries. The subjects covered include safe software, safety cases, management & development, security, human factors, guidelines standards & certification, applications & industrial experience, formal methods & models and validation, verification and testing. SAFECOMP '97 continues the successful series of SAFECOMP conferences first held in 1979 in Stuttgart. SAFECOMP is organised by the European Workshop on Industrial Computer Systems, Technical Committee 7 on Safety, Security and Reliability (EWICS TC7).**
