These reports provide in-depth technical detail. Astronomy and Astrophysics in the New Millenium: An Overview summarizes the science goals and recommended initiatives in a short, richly illustrated, non-technical booklet.

In celebration of one of science fiction's most beloved franchises, an updated edition of the acclaimed Ships of the Line hardcover collection. They dared to risk it all in a skiff of reeds or leather, on a ship of wood or steel, knowing the only thing between them and certain death was their ship. To explore, to seek out what lay beyond the close and comfortable, every explorer had to embrace danger. And as they did so, what arose was a mystical bond, a passion for the ships that carried them. From the very first time humans dared to warp the fabric of space, escaping from the ashes of the third World War, they also created ships. These vessels have become the icons of mankind's desire to rise above the everyday, to seek out and make the unknown known. And these ships that travel the stellar seas have stirred the same passions as the ones that floated in the oceans. While every captain has wished that their starship could be outfitted in the same manner as the sailing ship H.M.S. Beagle—without weapons—that proved untenable. From the start, Starfleet realized that each vessel, due to the limited range of the early warp engines, must be able to stand alone against any attack. Thus arose the idea, taken from the days of wooden sailing ships, that every Starfleet vessel must stand as a ship of the line. Through the actions of their captains and crews, countless starships have taken on that role. Here we remember some of those ships and their heroic crews. In celebration of one of science fiction's most beloved franchises, this updated edition of the acclaimed Ships of the Line hardcover collection now includes dozens of additional images brought together for the first time in book format—spectacular renderings featured in the highly successful Star Trek: Ships of the Line calendar series. With text by Star Trek's own Michael Okuda, the story of each of these valiant starships now comes to life. ™, ®, & © 2014 CBS Studios, Inc. An insightful and essential new survey of Wyeth's entire career, situating the milestones of his art within the trajectory of 20th-century American life This major retrospective catalogue explores the impact of time and place on the work of beloved American painter Andrew Wyeth (1917-2009). While previous publications have mainly analyzed Wyeth's work thematically, this publication places him fully in the context of the long 20th century, tracing his creative development from World War I through the new millennium. Published to coincide with the centenary of Wyeth's birth, the book looks at four major chronological periods in the artist's career: Wyeth as a product of the interwar years, when he started to form his own "war memories" through military props and documentary photography he discovered in his father's art studio; the change from his "theatrical" pictures of the 1940s to his own visceral responses to the landscape around Chadds Ford, Pennsylvania, and his family's home in Maiꟾ his sudden turn, in 1968, into the realm of erotic art, including a completely new assessment of Wyeth's "Helga pictures"--a series of secret, nude depictions of his neighbor Helga Testorf--within his career as a whoꞱ and his late, self-reflective works, which includes the discussion of his previously unknown painting entitled Goodbye, now believed to be Wyeth's last work.

A Novel
The first science fiction course in the American academy was held in the early 1950s. In the sixty years since, science fiction has become a recognized and established literary genre with a significant and growing body of scholarship. The Cambridge History of Science Fiction is a landmark volume as the first authoritative history of the genre. Over forty contributors with diverse and complementary specialties present a history of science fiction across national and genre boundaries, and trace its intellectual and creative roots in the philosophical and fantastic narratives of the ancient past. Science fiction as a literary genre is the central focus of the volume, but fundamental to its story is its non-literary cultural manifestations and influence. Coverage thus includes transmedia manifestations as an integral part of the genre's history, including not only short stories and novels, but also film, art, architecture, music, comics, and interactive media.

This new edition of the successful calendars book is being published at the turn of the millennium and expands the treatment of the previous edition to new calendars and variants. As interest grows in the impact of seemingly arbitrary calendrical systems upon our daily lives, this book frames the world in a completely algorithmic form. The book gives a description of twenty-five calendars and how they relate to one another: the Gregorian (current civil), ISO (International Organization for Standardization), Egyptian (and nearly identical Armenian), Julian (old civil), Coptic, Ethiopic, Islamic (Moslem), modern Persian (both astronomical and arithmetic forms), Baha'i (both present and future forms), Hebrew (Jewish), Mayan (long count, haab, and tzolkin), Balinese Pawukon, French Revolutionary (both astronomical and arithmetic forms), Chinese (and nearly identical Japanese), old Hindu (solar and lunisolar), and modern Hindu (solar and lunisolar). Easy conversion among these calendars is a by-product of the approach, as is the determination of secular and religious holidays. Calendrical Calculations makes accurate calendrical algorithms readily available for computer use with LISP, Mathematica, and Java code for all the algorithms included on the CD, and updates are available on the Web. This book will be a valuable resource for working programmers as well as a fount of useful algorithmic tools for computer scientists. In addition, the lay reader will find the historical setting and general calendar descriptions of great interest.

200 YEARS AGO: The expanding Klingon™ Empire found a frozen world rich in deposits of the mineral topaline. FOUR YEARS AGO: The Klingon Empire invaded Cardassia, breaching the Khitomer Accords and causing a break with the Federation. A solution to the diplomatic impasse must be found, a task that falls to the Federation's new ambassador to the Klingon Empire -- Worf. Worf thinks of himself as a fighter, not a negotiator, but the Federation disagrees. Now, for the sake of the Federation and the Empire, a Klingon warrior must weave a fragile peace out of a situation ripe for war!
