"Works of Dr. Shiyali Ramamrita Ranganathan (S.R. Ranganathan) need no introduction. They are renowned not because they cover certain facet of library and information science, but because they have been written by the father of library science in india, Dr. Ranganathan. These library science classics have been reprinted to make Dr. Ranganathan's work available to the current generation of librarians and for those to come."

With the inclusion of applications of singular value decomposition (SVD) and principal component analysis (PCA) to image compression and data analysis, this edition provides a strong foundation of linear algebra needed for a higher study in signal processing. The use of MATLAB in the study of linear algebra for a variety of computational purposes and the programmes provided in this text are the most attractive features of this book which strikingly distinguishes it from the existing linear algebra books needed as pre-requisites for the study of engineering subjects. This book is highly suitable for undergraduate as well as postgraduate students of mathematics, statistics, and all engineering disciplines. The book will also be useful to Ph.D. students for relevant mathematical resources.NEW TO THIS EDITION The Third Edition of this book includes: • Simultaneous diagonalization of two diagonalizable matrices • Comprehensive exposition of SVD with applications in shear analysis in engineering • Polar Decomposition of a matrix • Numerical experimentation with a colour and a black-and-white image compression using MATLAB • PCA methods of data analysis and image compression with a list of MATLAB codes

This volume is a collection of scholarly papers that explore the complex issues concerning English Studies in the present Indian context. The discussions in this volume range from historical perspectives to classroom-specific pedagogies, from sociological and political hierarchies to the dynamics of intellectual development in the English language environment. Interrogating both policy and practice pertaining to English Studies in the context of Indian society, culture, history, literature and governance, the chapters seek to formulate contemporary perspectives to these debates and envision alternative possibilities. Since the introduction of English to India more than 2 centuries ago, the language has transmuted the very fabric of Indian society, culture, history, literature and governance. The idea of India cannot be conceived in its entirety without taking into consideration the epistemological role that English has played in its formation. The present globalized world order has added dimensions to English Studies which are radically different from those of India ' s colonial and postcolonial past. It is therefore imperative that the multitudinous shades and shadows of the discipline be re-examined with inputs drawn from the present context. This volume is for scholars and researchers of English literature and language studies, linguistics, and culture studies, and others interested in exploring new paradigms of engagement with the disciplinary formulation of English Studies in India.

BASIC TECHNICAL COMMUNICATION

Trends in Library and Information Science

The younger generation today aspires to work for multinational corporations, large organizations, or the civil services as these are more remunerative or invest them with more power. And, with the competition becoming stiffer each passing day, the ability to communicate effectively, precisely as well as acquiring communication skills has become an important determinant in getting jobs and subsequent growth and development. A plethora of books have flooded the market to capitalize on this frantic effort of the younger generation to become adept in communication and more so in technical communication. This comprehensive book on Basic Technical Communi-cation strives to focus on the communication skills needed by professionals. One of the major aims of this text is to enable students to acquire proficiency in the English language. Divided into five parts and 19 chapters, the text deals with the four essential ingredients of communication—reading, writing, listening and speaking skills—as well as their importance, objectives, types, and methods of improving these skills. The book also discusses how these skills can be effectively applied and provides considerable practice exercises. KEY FEATURES : The text is logically organized with adequate practice in each part. Gives emphasis on grammar and pronunciation. Provides plenty of vocabulary on commonly mis-spelt words, difficult words, foreign words, and so on. This student-friendly book, suffused with practical examples, is primarily intended as a textbook for the first year students of engineering (B.Tech.) of Uttarakhand Technical University for their course on Basic Technical Communication. It will also be of immense benefit to undergraduate students and technical professionals across the country.

The Arthasaṃgraha is profound in contents, scholarly in treatment and simple and lucid in style and language. It condenses great amount of matter in pregnant language. The author, Laugaksi Bhaskara, about whose personal life sufficient information is not available, probably belonged to the South and Flourished in the 14th-15th century. He wrote the text for beginners and so the language is characterized by simplicity and brevity which are maintained even in the treatment of difficult problems. The work has gained popularity among scholars and beginners both and serves well as a gateway to the system of Purva Mimamsa. The full name of the wok as given by the author in the colophon is Purvamimamsarthasamgraha which means a compendium dealing with the topics of Purva Mimamsa. The present edition comprises the Sanskrit text in Devanagari script and translation into English with profuse notes, explanatory and critical, by Professor Gajendragadkar and Karmarkar, which has proved the best on account of its merits. Living things are constantly engaged in a struggle for existence, and ingenious devices for the purpose of self-preservation can be seen in all types of animal and plant life. However, nature also displays phenomena that are not related to survival or that seem clearly to violate the principle of self-preservation - particularly when organisms interact with one another. Darwin investigated these apparent contradictions and proposed that both mechanisms of self preservation and those of reproduction are explained by a more basic principle of "natural selection" - the reproductive survival of the fittest. George C. Williams in "Group Selection" challenges the adequacy of this process of selection at the individual level.Williams has here collected the work of the chief partisans with opposed viewpoints on the theory of selection at the group level to state their arguments and rebuttals. A minority of modern biologists offer evidence to show that groups of living things are organized to assure their collective survival; they are not merely collections of individuals designed for their own survival and reproduction. In opposition, defenders of the traditional point of view charge that mechanisms of group survival are based on illusion and misinterpretation.Because of the wide range of opinion expressed in "Group Selection", the reader is exposed to all sides of the dispute and encouraged to form his or her own views. In addition, as a source book on current evolutionary issues or for research or reference material, "Group Selection" remains a valuable addition to every personal and institutional library in the biological sciences.

In this latest Seventh Edition , five New Chapters (No. 28, 29, 33, 36 and 37) have been added to enhance the scope and utility of the book: three chapters pertain to Bioenergetics and Metabolism (Biosynthesis of Nucleotides, Degradation of Nucleotides, Mineral Metabolism) and two to Nutrition Biochemistry (Principles of Nutrition, Elements of Nutrition). In fact, all the previously-existing 35 chapters have been thoroughly revised, enlarged and updated in the light of recent advancements and the ongoing researches being conducted the world over.
