

Symbols Of Transformation (The Collected Works Of C G Jung)

Five long essays that trace Jung's developing interest in alchemy from 1929 onward. An introduction and supplement to his major works on the subject, illustrated with 42 patients' drawings and paintings.

In 1911 Jung published a book of which he says: '...it laid down a programme to be followed for the next few decades of my life.' It was vastly erudite and covered innumerable fields of study: psychiatry, psychoanalysis, ethnology and comparative religion amongst others. In due course it became a standard work and was translated into French, Dutch and Italian as well as English, in which language it was given the well-known but somewhat misleading title of The Psychology of the Unconscious. In the Foreword to the present revised edition which first appeared in 1956, Jung says: '...it was the explosion of all those psychic contents which could find no room, no breathing space, in the constricting atmosphere of Freudian psychology... It was an attempt, only partially successful, to create a wider setting for medical psychology and to bring the whole of the psychic phenomena within its purview.' For this edition, appearing ten years after the first, bibliographical citations and entries have been revised in the light of subsequent publications in the Collected Works and in the standard edition of Freud's works, some translations have been substituted in quotations, and other essential corrections have been made, but there have been no changes of substance in the text.

An Analysis of the Prelude to a Case of Schizophrenia

Man and His Symbols

This volume has become known as perhaps the best introduction to Jung's work. In these famous essays, "The Relations between the Ego and the Unconscious" and "On the Psychology of the Unconscious," he presented the essential core of his system. Historically, they mark the end of Jung's intimate association with Freud and sum up his attempt to integrate the psychological schools of Freud and Adler into a comprehensive framework. This is the first paperback publication of this key work in its revised and augmented second edition of 1966. The earliest versions of the Two Essays, "New Paths in Psychology" (1912) and "The Structure of the Unconscious" (1916), discovered among Jung's posthumous papers, are published in an appendix, to show the development of Jung's thought in later versions. As an aid to study, the index has been comprehensively expanded.

A complete revision of Psychology of the Unconscious (orig. 1911-12), Jung's first important statement of his independent position.

Psyche and Symbol

(From Vol. 9i Collected Works)

At the turn of the last century C.G. Jung began his career as a psychiatrist. During the next decade, three men whose names are famous in the annals of medical psychology influenced his professional development: Pierre Janet, under whom he studied at the Sappetriere Hospital in Paris; Eugen Bleuler, his chief at the Burgholzli Mental Hos

Bleuler, and to a lesser extent Janet, whose influence is to be found in the descriptive experimental psychiatry composing Volume I of the Collected Works. These papers appeared between 1902 and 1905l most of them are now being published in English for the first time. The volume opens with Jung's dissertation for the medical degree:

a study that foreshadows much of his later work, and as such is indispensable to all serious students of his work. It is the detailed analysis of the case of an hysterical adolescent girl who professed to be a medium. The volume also includes papers on cryptomnesia, hysterical parapraxes in reading, manic mood disorder, simulated insanity,

together with two lectures on the association method given in 1909 at Clark University and three articles on psychophysical researches from American and English journals in 1907-1908, compose this volume. Jung's association studies showed the definite influence of Bleuler and also of Freud, with whom he worked closely for several year
