In thousands of factories around the U.S., Britain, and every other industrial nation, workers suffer from occupationally-caused illness and accidents that could easily have been prevented. This book is about the politics behind industrial health and safety decision-making in the U.S. and Britain, where human health and safety considerations often take a back seat to overall social and economic goals. Wilson contends that it is political actors—Presidents and Parliament, Congress and the Court—who set the general framework for the decisions made within health and safety bureaucracies, and that American governmental and interest groups are less equipped for the peaceful resolution of disputes over economic and industrial issues than Britain's highly corporatist form of policy-making.

Mirroring a worldwide phenomenon in industrialized nations, the U.S. is experiencing a change in its demographic structure known as population aging. Concern about the aging population tends to focus on the adequacy of Medicare and Social Security, retirement of older Americans, and the need to identify policies, programs, and strategies that address the health and safety needs of older workers. Older workers differ from their younger counterparts in a variety of physical, psychological, and social factors. Evaluating the extent, causes, and effects of these factors and improving the research and data systems necessary to address the health and safety needs of older workers may significantly impact both their ability to remain in the workforce and their well being in retirement. Health and Safety Needs of Older Workers provides an image of what is currently known about the health and safety needs of older workers and the research needed to encourage social policies that guarantee older workers a meaningful share of the nation's work opportunities.

Safe Work in the 21st Century

Despite many advances, 20 American workers die each day as a result of occupational injuries. And occupational safety and health (OSH) is becoming even more complex as workers move away from the long-term, fixed-site, employer relationship. This book looks at worker safety in the changing workplace and the challenge of ensuring a supply of top-notch OSH professionals. Recommendations are addressed to federal and state agencies, OSH organizations, educational institutions, employers, unions, and other stakeholders. The committee reviews trends in workforce demographics, the nature of work in the information age, globalization of work, and the revolution in health care delivery—exploring the implications for OSH education and training in the decade ahead. The core professions of OSH (occupational safety, industrial hygiene, and occupational medicine and nursing) and key related roles (employee assistance professional, ergonomist, and occupational health psychologist) are profiled—how many people are in the field, where they work, and what they do. The book reviews in detail the education, training, and education grants available to OSH professionals from public and private sources.

Before effective treatments were introduced in the 1950s, tuberculosis was a leading cause of death and disability in the United States. Health care workers were at particular risk.

Although the occupational risk of tuberculosis has been declining in recent years, this new book from the Institute of Medicine concludes that vigilance in tuberculosis control is still needed in workplaces and communities. Tuberculosis in the Workplace reviews evidence about the effectiveness of control measures—such as those recommended by the Centers for Disease Control and Prevention—intended to prevent transmission of tuberculosis in health care and other workplaces. It discusses whether proposed regulations from the Occupational Safety and Health Administration would likely increase or sustain compliance with effective control measures and would allow adequate flexibility to adapt measures to the degree of risk facing workers.

This report follows up on an interim report released in February 2004 that focused on immediate needs in the areas of animal care and management, recordkeeping, and pest control. The report finds that the zoo has made good-faith efforts to correct deficiencies noted in the interim report and has made some noticeable improvements in the past year in zoo operations and animal care. However, problems in areas such as staff training, workplace culture, and strategic planning still need to be addressed. Specifically, the report recommends that the zoo immediately develop and implement animal-care training programs to ensure that people who are directly responsible for the well-being of its animal collection are adequately prepared and competent. The report commends a zoo-initiated strategic planning process as a positive step, but recommends it contain a more detailed, comprehensive strategy of how it will meet short-term goals and that it should link plans to upgrade facilities with those to acquire animals. The zoo should also focus on improving communication among keepers, veterinarians, nutritionists, senior managers, and curators.

The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and comprehensive Occupational Health and Safety Program (OHSP) that can identify and mitigate potential hazards. Occupational Health and Safety in the Care and Use of Nonhuman Primates is intended as a reference for vivarium managers, veterinarians, researchers, safety professionals, and others who are involved in developing or implementing an OHSP that deals with nonhuman primates. The book lists the important features of an OHSP and provides the tools necessary for informed decision-making in developing an optimal program that meets all particular institutional needs.

Executive Summary With increasing public demands for accountability, there is a need to collect and present evidence of the effectiveness of practices and outcomes in higher education. Transformational leadership can facilitate the use of such evidence to improve programs and services that positively influence student learning. This form of leadership can be initiated top-down by presidents, chief academic officers, deans, and department chairs and/or bottom-up by students, faculty, staff, and other stakeholders. This briefing explores the leadership styles and insights about assessment of top administrators from eleven colleges and universities nationwide that have established reputations for good practice in outcomes assessment. In interviews with these leaders, we examine their perspectives on the following aspects of assessment: the vision, barriers, risks, methods of stakeholder engagement and support, collection and application of data, and sustainability of the process. Emergent themes in leading institutional change through assessment include the need for collaboration among administrators, faculty, and student affairs professionals; adequate training, recognition, and rewards for faculty and staff; and incorporation of assessment data into strategic plans, annual reports, budget hearings, and program reviews.

Each year, approximately 5,000 fatal work-related injuries and 4 million non-fatal injuries and illnesses occur in the United States. In order to assist in better evaluating workplace safety and create safer work environments, the Institute of Medicine conducted a series of evaluations of the National Institute for Occupational Safety and Health (NIOSH) research programs, assessing the relevance and impact of NIOSH's work on improving worker safety and health.

Most occupational safety and health books explain how to apply concepts, principles, elements, tools of prevention and develop interventions, and initiatives to mitigate occupational injuries, illnesses and deaths. This is not a how-to book. It is a book that addresses the philosophical basis for all of the varied components and elements needed to develop and manage a safety and health program. It is a book designed to answer the questions often posed as to why should we do it this way. It is the "Why" book and the intent is to provide a blueprint and a helpmate for the philosophical basis for occupational safety and health and the justification as an integral component of doing business.

This book covers the design, implementation, and auditing of structured occupational health and safety management systems (SMS), sometimes referred to as safety programs. Every workplace has a form of SMS in place as required by safety regulations and laws. The Design, Implementation, and Audit of Occupational Health and Safety Management Systems describes some of the elements that constitute a SMS, the implementation process, and the auditing of the conformance to standards. It covers more than 60 processes, programs, or standards of a system, and gives important background information on each element. Guidelines and examples show how to design and implement the risk-based processes, programs and standards, and how to audit them against standards. The text is based on actual SMS implementation experiences across a wide range of industries. It offers a roadmap to any organization which has no structured SMS. It will guide them through the process of upgrading their health and safety processes to conform to local and international standards.
