Assistive Technology Assessment Handbook, Second Edition, proposes an international ideal model for the assistive technology assessment process, outlining how this model can be applied in practice to re-conceptualize the phases of an assistive technology delivery system according to the biopsychosocial model of disability. The model provides reference guidelines for evidence-based practice, guiding both public and private centers that wish to compare, evaluate, and improve their ability to match a person with the correct technology model. This second edition also offers a contribution to the Global Cooperation on Assistive Technology (GATE) initiative, whose activities are strongly focused on the assistive products service delivery model. Organized into three parts, the handbook: gives readers a toolkit for performing assessments; describes the roles of the assessment team members, among them the new profession of psychotechnologist; and reviews technologies for rehabilitation and independent living, including brain-computer interfaces, exoskeletons, and technologies for music therapy. Edited by Stefano Federici and Marcia J. Scherer, this cross-cultural handbook includes contributions from leading experts across five continents, offering a framework for future practice and research.

A guide for constructing and using composite indicators for policy makers, academics, the media and other interested parties. In particular, this handbook is concerned with indicators which compare and rank country performance.

The IMF's work on data dissemination standards consists of two tiers: the General Data Dissemination System (GDDS), which applies to all IMF member countries, and the Special Data Dissemination Standard (SDDS), for those members having or seeking access to international capital markets. The GDDS framework provide governments with guidance on the overall development of the macroeconomic, financial, and sociodemographic data that are essential for policymaking and analysis in an environment that increasingly requires relevant, comprehensive, and accurate statistical data. This Guide explains the nature, objectives, and operation of the GDDS; the data dimensions it covers; and how countries participate. It provides national statistical authorities with a management tool and a framework to foster sound statistical methodology, professional data compilation, and data dissemination. The Guide supersedes the version updated in March 2002 and incorporates the UN Millennium Development Goals (MDGs) as specific elements of the GDDS sociodemographic component, which was articulated with the collaboration of the World Bank.

In today's modern age where information is constantly being shared, intellectual property and protection remains a crucial aspect in economic development. Open access has emerged as a cutting-edge tool that allows writers and authors to share their work freely while still holding protection and security over it. With technology playing a crucial role in economic growth, open access practices could be a key contributor in the innovation and development of information and public policy. What researchers need is a comprehensive approach to the concept of open access practice, its foundations,

and current status. Building Equitable Access to Knowledge Through Open Access Repositories provides emerging research exploring the theoretical and practical aspects of open access publishing practices in the digital age and applications within scientific and academic research. Featuring coverage on a broad range of topics such as copyright protection, social justice, and European Copyright Framework, this book is ideally designed for researchers, scientists, policymakers, librarians, IT specialists, authors, publishers, academicians, and students seeking current research on the advancement of intellectual property rights in today's technologically driven world.

Music Description and Access: Solving the Puzzle of Cataloging is both a textbook for students and a handbook and reference source for practicing catalogers. The bulk of the book is a step-by-step guide to cataloging music materials, with dozens of examples showing images of published scores or audio recordings. Content and encoding are treated separately, using RDA and MARC21. Interspersed in the chapters on practical cataloging are short Historical Asides, essays putting particular devices or conventions into context. These essays supplement a chapter on cataloging history, which follows an introductory chapter that sets the stage for the task at hand. The book ends with a chapter by Maristella Feustle on describing and providing access to music special collections, using both archival and rare-music-cataloging standards. Aids in navigating the book include an index plus multiple lists and tables. A bibliography and a list of cataloging tools that are available online are also given.

"What our teachers don't tell us in school is that we will spend most of our scientific or engineering career in front of computers, trying to beat them into submission." This extract from the Preface sets the style for this highly readable book. It is packed with information covering data representations, the pitfalls of computer arithmetic, and a variety of widely-used representations and standards. Each chapter begins with a detailed contents list and finishes with a brief summary of the topics presented and the whole is rounded off with a glossary and index. Novices will enjoy an occasionally lighthearted read from start to finish, while even the most experienced computer users who use the book as a reference will discover useful nuggets of information. A structured array of data sets are available online via the TELOS Web site, www.telospub.com, which will provide users with direct digital access to information they might need in working through the book.

The Special Data Dissemination Standard (SDDS) was established by the IMF in 1996 to guide members that already had, or that might seek, access to international capital markets in providing key economic and financial data to the public. In the following year, the IMF established the General Data Dissemination Standard (GDDS), which seeks to prepare countries for meeting the requirements of the SDDS. Data supplied by countries subscribing to the SDDS, as well as information provided by countries participating in the GDDS, are posted on the Dissemination Standards Bulletin Board (DSBB) on the IMF's public website (<http://dsbb.imf.org>). This Guide is intended to assist subscribers of the SDDS, GDDS participants moving toward subscription to the SDDS, and users of the DSBB in becoming aware of the features and scope of the SDDS and the DSBB. It is intended to further the IMF's initiatives in data transparency and standards, to enhance the public availability of timely and comprehensive international statistics, and therefore to contribute to countries pursuit of sound macroeconomic policies and to the improved functioning of global financial markets.

Concepts lie at the core of social science theory and methodology. They provide substance to theories; they form the basis of measurement; they influence the selection of cases. Social Science Concepts: A Users Guide explores alternative means of concept construction and their impact on the role of concepts in measurement, case selection, and theories. While there exists a plethora of books on measurement, scaling, and the like, there are virtually no books devoted to the construction and analysis of concepts and their role in the research enterprise. Social Science Concepts: A Users Guide provides detailed and practical advice on the construction and use of social science concepts; a Web site provides classroom exercises. It uses a wide range of examples from political science and sociology such as revolution, welfare state, international disputes and war, and democracy to illustrate the theoretical and practical issues of concept construction and use. It explores the means of constructing complex, multilevel, and multidimensional concepts. In particular, it examines the classic necessary and sufficient condition approach to concept building and contrasts it with the family resemblance approach. The consequences of valid concept construction are explored in both qualitative and quantitative analyses. Social Science Concepts: A Users Guide will prove an indispensable guide for graduate students and scholars in the social sciences. More broadly, it will appeal to scholars in any field who wish to think more carefully about the concepts used to create theories and research designs. For Course Use: Social Science Concepts: A Users Guide has been written with classroom use in mind. Many of the chapters have been successfully taught at the Annual Training Institute on Qualitative Research Methods which is sponsored by the Consortium on Qualitative Research Methods. Feedback from those

experiences has been incorporated into the text. Each chapter provides useful, practical, and detailed advice on how to construct, evaluate, and use concepts. To make the volume more useful, an extensive set of classroom exercises is available from the author's Web page at http://www.u.arizona.edu/~ggoertz/social_science_concepts.html. These include questions about prominent published work on concepts, measures, and case selection; in addition there are logic exercises and questions regarding large-N applications.
