This textbook is intended to meet the needs of a first course in accounting information systems at either the undergraduate or graduate level. It may also be used as a review text in second or subsequent courses in this area. A primary objective in writing the seventh edition of the text was to present AIS material that would make students more marketable in today's accounting environment. Recognizing that over 90 percent of accounting systems are licensed rather than internally custom developed and that the current market demand is for accounting graduates who can install, operate, and audit such systems, this text represents a new paradigm. In contrast to traditional accounting systems textbooks that assume an organization will develop its own accounting system and, therefore, emphasize systems development, this textbook gives students the theoretical foundation and skills they will need to conduct a requirements analysis, search for a commercial solution, and successfully implement the software package selected. In addition to learning the essential AIS concepts, you will see much discussion and many examples of commercial accounting systems software as it is designed and as it should be designed. Another objective in writing this edition was to make the material student friendly. Therefore, the authors took great care in directing their words to the students. Recognizing that this is their first introduction to accounting systems, clear definitions of terms were included and numerous examples and illustrations were incorporated to explain the material. The book consists of fifteen chapters. The first fourteen chapters provide the theoretical and practical foundation for the final chapter on selecting and implementing AIS software. The learning experience will be optimized if all fifteen chapters are covered.

The revolutionary effects of using accounting information systems by displacing manual information systems in the private and public sectors cannot be overstated. The benefits of this substitution of set of processes include increased mathematical accuracy, predefined fields and coding tasks, and de-emphasis of manual clerical labor in favor of labor adept in data processing. Reporting can be significantly automated, facilitating managerial power and control at a distance and the proliferation of global enterprises. The potential detriments are rarely accurately, completely, and timely addressed as information system vendors, management consultants, and corporate procurement teams race toward the popularly conceived state of the art. Systems are balkyhoed as continually improving in processing speed, functionality, and capacity. Users of these automated systems may not consider big picture effects, and they may not intelligently consider the conduct risks to their own enterprises by concentrating such global reach and influence at high levels of senior management without dedicating adequate resources to verifying the accuracy, completeness, and timeliness of the information systems. This book considers these risks.

At an informal Board meeting in January, there was broad support for removing the current blanket prohibition on the provision of non-audit-related consulting services by the Fund ' s external audit firm and replacing it with a blacklist approach, subject to robust safeguards to ensure the independence of the external audit firm. This paper makes specific proposals to implement such a change. This would align the Fund ' s policy on the provision of consulting services by the external audit firm with practices followed in major jurisdictions and allow the external auditor to perform certain consulting services with proper safeguards to maintain the auditor ' s independence. The proposed safeguards include: (i) a blacklist of prohibited services; (ii) an independence declaration by the external audit firm; (iii) limitations on the consulting fees that can be paid to the external audit firm; (iv) an oversight role for the External Audit Committee (EAC); and (v) review of consulting services provided by audit firms prior to the selection of a new external audit firm for the Fund. The staff sought the views of the EAC, which concurs with the proposal to modify the policy on the provision of consulting services by the external audit firm along with the related safeguards.
