Today's youth face many risks, including drug abuse, violence, and HIV/AIDS. Responding to these risks before they become problems can be difficult. One of the goals of writing this book is to help the public understand the causes of drug abuse and to prevent its onset. Drug abuse has serious consequences in our homes, schools, and communities. From this book's perspective, the use of all illicit drugs and the inappropriate use of illicit drugs are considered drug abuse. Prevention science has made great progress in recent years. Many interventions are being tested in "real-world" settings, so they can be more easily adapted for community use. Scientists are studying a broader range of populations and topics. They have identified, for example, effective interventions with younger populations to help prevent risk behaviors before drug abuse occurs. Researchers are also studying older teens, which are already using drugs to find ways to prevent further abuse or addiction. Practical issues, such as cost-benefit analyses, are being studied. Presenting these findings to the public through this book is the most important responsibility. I am pleased to offer this First edition of the publication, DRUG ABUSE - PROBLEM MANAGEMENT AND PREVENTION First Edition. The first edition offers updated principles, new questions and answers, new program information, and expanded references. This edition summarizes sections of the guide for community use. This book is designed as per the latest syllabus of Guru Nanak Dev University Amritsar. I hope you will find this First edition useful and helpful. Prof. Punit Pariparipunit@gmail.com

NATO Glossary of terms and definitions (English and French). Listing terms of military significance and their definitions for use in NATO.

The Industrial Electronics Handbook, Second Edition, Industrial Communications Systems combines traditional and newer, more specialized knowledge that helps industrial electronics engineers develop practical solutions for the design and implementation of high-power applications. Embracing the broad technological scope of the field, this collection explores fundamental areas, including analog and digital circuits, electronics, electromagnetic machines, signal processing, and industrial control and communications systems. It also facilitates the use of intelligent systems—such as neural networks, fuzzy systems, and evolutionary methods—in terms of a hierarchical structure that makes factory control and supervision more efficient by addressing the needs of all production components. Enhancing its value, this fully updated collection presents research and global trends as published in the IEEE Transactions on Industrial Electronics Journal, one of the largest and most respected publications in the field. Modern communication systems in factories use many different—and increasingly sophisticated—systems to send and receive information. Industrial Communication Systems spans the full gamut of concepts that engineers require to maintain a well-designed, reliable communications system that can ensure successful operation of any production process. Delving into the subject, this volume covers:

Abu Dhabi's urban development path contrasts sharply with its exuberant neighbour, Dubai. As Alamira Reem puts it, Abu Dhabi, capital of the United Arab Emirates since 1971, 'has been quietly devising its own plans ... to manifest its role and stature as a capital city'. Alamira Reem, a native Abu Dhabian and urban planner and researcher who has studied the emirate's development for more than a decade, is uniquely placed to write its urban history. Following the introduction and description of Abu Dhabi's early modern history, she focuses on three distinct periods dating from the discovery of oil in 1960, and coinciding with periods in power of the three rulers since then: Sheikh Shakhbut bin Sultan Al Nahyan (1960-1966), Sheikh Zayed bin Sultan Al Nahyan (1966-2004), and Sheikh Khalifa bin Zayed Al Nahyan (2004-). Based on archival research, key interviews and spatial mapping, she analyses the different approaches of each ruler to development; investigates the role of planning consultants, architects, developers, construction companies and government agencies; examines the emergence of comprehensive development plans and the policies underlying them; and assesses the effects of these many and varied influences on Abu Dhabi's development. She concludes that, while much still needs to be done, Abu Dhabi's progress towards becoming a global, sustainable city provides lessons for cities elsewhere.

Breastfeeding is the preferred method of feeding in early life. It is also one of the most cost-effective childhood survival interventions. Breastfeeding practices are important for preventing child mortality and morbidity, as well as ensuring the optimal growth, health, and development of infants. The public health benefits of breastfeeding have been well documented in the medical literature, and include the following: associations with decreased risk for early-life diseases such as otitis media, respiratory tract infection, diarrhoea, and early childhood obesity (to name but a few). This Special Issue book includes a collection of studies on the use of novel methods to improve breastfeeding rates, and research exploring the short- and long-term benefits of breastfeeding for both the infant and mother, including technology-based approaches.

The aim of the American Psychiatric Association Practice Guideline series is to improve patient care. Guidelines provide a comprehensive synthesis of all available information relevant to the clinical topic. Practice guidelines can be vehicles for educating psychiatrists, other medical and mental health professionals, and the general public about appropriate and inappropriate treatments. The series also will identify those areas in which critical information is lacking and in which research could be expected to improve clinical decisions. The Practice Guidelines are also designed to help those charged with overseeing the utilization and reimbursement of psychiatric services to develop more scientifically based and clinically sensitive criteria.
