This comprehensive study of Anglicisms in the context of accelerated neological activity in Contemporary Metropolitan French not only provides detailed documentation and description of a fascinating topic, but opens up new vistas on issues of general linguistic interest: the effects of technology on language, the analyticity-syntheticity controversy, the lexical contribution to language vitality, the study of compound word formation, the interplay between cultural and linguistic affectivity. By investigating the dynamics of borrowing within the larger framework of general neological productivity and by bringing to bear cognitive and pragmatic considerations, a much-needed fresh approach to the entire question of Anglicisms takes shape. All pertinent phenomena regarding Anglicisms in French — a topic which continues to command the attention of language commentators and defenders in France and elsewhere — are explored: integral borrowings, semantic calques, structural calques, the generation of pseudo-Anglicisms and hybrids, graphological and phonological phenomena. In each case, the phenomenon is investigated in the proper context of its interaction with other pertinent neological, phonological and sociocultural developments. These include general changes in French compound word formation, modified derivational dynamics, the microsystem of pseudo-Classical morphology, historic phonological instabilities, the pressure for more synthetic types of lexical production in relation to the needs of technology and society. Rather than adhering rigidly to any single theoretical model,

there is an attempt to set up a dialog between differing models in order to arrive at a multidimensional view of the phenomena investigated.

Syntax – the study of sentence structure – has been at the centre of generative linguistics from its inception and has developed rapidly and in various directions. The Cambridge Handbook of Generative Syntax provides a historical context for what is happening in the field of generative syntax today, a survey of the various generative approaches to syntactic structure available in the literature and an overview of the state of the art in the principal modules of the theory and the interfaces with semantics, phonology, information structure and sentence processing, as well as linguistic variation and language acquisition. This indispensable resource for advanced students, professional linguists (generative and non-generative alike) and scholars in related fields of inquiry presents a comprehensive survey of the field of generative syntactic research in all its variety, written by leading experts and providing a proper sense of the range of syntactic theories calling themselves generative.

It is widely accepted that English is the first truly global language and lingua franca. Anna Wierzbicka, the distinguished linguist known for her theories of semantics, has written the first book that connects the English language with what she terms "Anglo" culture. Wierzbicka points out that language and culture are not just interconnected, but inseparable. She uses original research to investigate the "universe of meaning" within the English language (both grammar and vocabulary) and places it in historical and geographical perspective. This engrossing and fascinating work of scholarship should appeal not only to linguists and others concerned with language and culture, but the large group of scholars studying English and English as a second language.

Examining the syntax and semantics of discourse markers, this book employs a syntactic approach to describe discourse markers in Head-Driven Phrase Structure Grammar (HPSG), relevant in a theory of discourse because it provides a framework in which all levels of grammar can be integrated. Since discourse markers operate at discourse level, a well developed discourse theory is required – in this case, Segmented Discourse Representation Theory (SDRT) is adopted. During the course of the book, Minimal Recourse Semantics is explained as it provides an integration of HPSG and SDRT. The approach described is exemplified with an analysis of 'anyway'. This book provides a detailed overview of research on discourse markers covering different areas of linguistics: from a discourse analysis point of view, to a Relevance Theory perspective going through a computational linguistics approach. Containing a precise summary of HPSG and the recently developed SDRT, it will be of great interest to researchers in semantics, pragmatics, grammar and discourse analysis.

This book presents a thorough description of morphosyntactic knowledge developed by learners of French in four different learning situations first language (L1) acquisition, second (L2) language acquisition, bilingualism, and acquisition by children with Specific Language Impairment within the theoretical framework of generative grammar. This approach allows for multiple comparisons across acquisition contexts, which provides the reader with invaluable insights into the nature of the acquisition process. The book is divided into four parts each dealing with a major morphosyntactic domain of acquisition: the verbal domain, the pronominal domain, the nominal domain, and the CP domain. Each part contains four chapters, the first one presenting an overview of the basic facts and analyses of the relevant properties of French, and the next three focusing on the different acquisition contexts. This book will be useful to anyone interested in the acquisition of French and in language development in general. It is also meant to stimulate cross-linguistic research from a theoretical perspective."

Urarina is an endangered isolate spoken by less than 3,000 people in the rainforests of North-western Peru. This book aims at providing a comprehensive description of Urarina grammar covering all areas of the language. From a linguistic point of view, Urarina is particularly interesting because of a range of unusual grammatical characteristics that are rarely or not at all found in other languages. One remarkable property is the constituent order OVA/VS, which was classified as "non-existing" by Greenberg (1966). However, this atypical syntactic structure is a surprisingly consistent feature of Urarina, which discerns it from the majority of languages which are assumed to follow this syntactic pattern. Another feature probably unique to Urarina is the existence of a three-way distinction for person marking on all verbs. The choice of the respective paradigm depends on a complex set of syntactic and pragmatic conditions, which are investigated in detail. Scholars whose main interest is in morphology will also be intrigued by the polysynthetic verbal morphology of Urarina, which fits well into the Amazonian context. A Grammar of Urarina is based on the framework of basic linguistic theory, which will be accessible to scholars from a wide range of backgrounds. The straightforward presentation of linguistic structures is accompanied by in-depth discussion of the most interesting and unusual features, illustrated by examples for all grammatical phenomena and often summarised by tables or diagrams. This book fills a gap not only for studies in Amazonian languages but also from a typological perspective.

"Adverbs, Events, and Other Things" treats issues in the semantics of manner adverbs. Part I takes up the Davidsonian claim that manner adverbs are predicates of events. The book investigates the subtle interplay of event individuation and various kinds of event modification and claims that manner adverbs play a core rôle in singling out both simple and complex events. Part II of the book is devoted to word order phenomena involving manner adverbs in German. Presenting a general theory of predication structure for German sentences, the author shows how the position of manner adverbs - in interplay with other factors - determines the division of an utterance into topic and comment. She thereby gives semantic evidence in favour of the claim that manner adverbs in German have a syntactic base position.
