Minutes

Most of us live in cities. These are becoming increasingly complex and removed from broad-scale agriculture. Yet within cities there are many examples of greenspaces and local food production that bring multiple benefits that often go unnoticed. This book presents a collection of the latest thinking on the multiple dimensions of sustainable greenspace and food production within cities. It describes the diversity of "urban agriculture" and seeks a balanced representation between the biophysical and the social. It deals with urban agriculture across scales - from indoor plants to farm-scale filtration of greywater. A range of examples and initiatives from both developed and developing countries is described and evaluated. (Publisher)

Diverse Activities and Benefits for City Society

Outbreaks of E. Coli and Salmonella from eating tainted meat or chicken and Mad Cow Disease have consumers and the media focused on food safety-related topics. This handbook aimed at students as well as consumers is an excellent starting point for locating both print and electronic resources with timely information about food safety issues, organizations and associations, and careers in the field.

This book owes its origins to a collation of some of my publications for which a higher doctorate (Doctor of Agricultural Science) was

awarded by the University of Melbourne in 2004. In that guise it was titled: Integrating Reductionist Research into International Agricultural Development: Re-conceiving Agricultural Research for Development; Technical Support for Development; Thai Agriculture; International Agriculture; Agricultural Education. It was thus an attempt to seek continuity across my research and development activities around various countries up until that time and to distill from it some conclusions that might inform future directions for international agricultural research and development. The citation from the higher doctorate read: 'to John Lindsay Falvey who, from 30 years' research combining technical, social, environmental, policy and historical research in the developing world, challenged the simple importing of agricultural technology. He demonstrated that indigenous knowledge and culture is critical to sustainability, food security and human development, thereby potentially benefitting millions of persons participating in international development projects.' The citation is both an exaggeration and an understatement. It may or may not have assisted millions of persons – how can anyone know. But in another sense, the work revealed the lost element of wholeness that once characterized good science, good lives and wisdom. The information presented here is snippets from papers and books that strive to make that revelation explicit. Its partial prototype benefitted in presentation and explication from my colleagues who formed the panel for the higher doctorate deliberations, Professors David Chapman, Adrian Egan and Robert White.

Plant Sciences Reviews 2012 provides scientists and students with analysis on key topics in current research, including plant diseases, genetics, climate impacts, biofuels and postharvest. Experts such as Frances Seymour, Roger Jones, Paul Christou and Errol Hewitt provide incisive reviews of their fields. Originally published online in CAB Reviews, this volume makes available in printed form the reviews in plant science published during 2012.

Lecture Series on Computer and on Computational Sciences (LSCCS) aims to provide a medium for the publication of new results and developments of high-level research and education in the field of computer and computational science. In this series, only selected proceedings of conferences in all areas of computer science and computational sciences will be published. All publications are aimed at top researchers in the field and all papers in the proceedings volumes will be strictly peer reviewed. The series aims to cover the following areas of computer and computational sciences: Computer Science Hardware Computer Systems Organization Software Data Theory of Computation Mathematics of Computing Information Systems Computing Methodologies Computer Applications Computing Milieu Computational Sciences Computational Mathematics, Theoretical and Computational Physics, Theoretical and Computational Chemistry Scientific Computation Numerical and Computational Algorithms, Modeling and Simulation of Complex System, Web-Based Simulation and Computing, Grid-Based Simulation and Computing Fuzzy Logic, Hybrid Computational Methods, Data Mining and Information Retrieval and Virtual Reality, Reliable Computing, Image Processing, Computational Science and Education Herbicide Resistance, January 1986 - January 1989
