OSHA 3317-06N. First aid is emergency care provided for injury or sudden illness before emergency medical treatment is available. The first-aid provider in the workplace is someone who is trained in the delivery of initial medical emergency procedures, using a limited amount of equipment to perform a primary assessment and intervention while awaiting arrival of emergency medical service (EMS) personnel. A workplace first-aid program is part of a comprehensive safety and health management system that includes the following four essential elements: management leadership and employee involvement, worksite analysis, hazard prevention and control, safety and training. The purpose of this guide, Best Practices Guide: Fundamentals of a Workplace First-Aid Program, is to present a summary of the basic elements for a first-aid program at the workplace. Those elements include: identifying and assessing the workplace risks that have potential to cause worker injury or illness; designing and implementing a workplace first-aid program that: aim to minimize the outcome of accidents or exposures; complies with OSHA requirements relating to first aid; includes sufficient quantities of appropriate and readily accessible first-aid supplies and first-aid equipment, such as bandages and automated external defibrillators; assigns and trains first-aid providers who: receive first-aid training suitable to the specific workplace, receive periodic refresher courses on first-aid skills and knowledge; instructing all workers about the first-aid program, including what workers should do if a coworker is injured or ill. Putting the policies and program in writing is recommended to implement this and other program elements; and providing for scheduled evaluation and changing of the first-aid program to keep the program current and applicable to emerging risks in the workplace, including regular assessment of the adequacy of the first-aid training course. This guide includes an outline of the essential elements of safe and effective first-aid training for the workplace as guidance to institutions teaching first-aid courses and to the consumer of these courses.

Critical Care Transport

Instructor Manual

Pediatric Advanced Life Support Provider Manual

**Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), Critical Care Transport offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, Critical Care Transport thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone—paramedics, nurses, physicians, and specialty crew—needs to know to operate effectively in the prehospital critical care environment. This book meets the curricula of major critical care training programs, including University of Maryland, Baltimore County (UMBC). It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-of-the-art information on management of critical care patients.**

**The student workbook for the credentialled Heartsaver Pediatric First Aid course. Provides information on how to manage illness and injuries in a child during the first few minutes of an emergency until professional help arrives. Includes four core modules: First Aid Basics, Injuries and Illnesses, Life-Threatening Emergencies and the Chain of Survival, and CPR and AED. Also includes optional modules, such as Use of a Nebulizer, to meet regulations for day-care centers in certain states. Workbook comes shrink-wrapped with the Heartsaver Pediatric First Aid Quick Reference Guide (#80-1002), the Adult CPR And AED Reminder Card, the Child And Infant CPR And AED Reminder Card, and a CD containing supplemental information and video clips on CPR and AED skills. An ideal resource for first responders, child-care workers, teachers, foster-care workers, camp counselors, youth organizations, coaches/Little League organizations, as well as parents, grandparents, and baby sitters.**

"Advanced Medical Life Support "is "text on practical methods for adult emergency treatment. Designed to provide students with the practical knowledge and skills to effectively manage on-scene, adult medical emergencies, each chapter moves from assessment-based procedures to field diagnosis and management of treatable cause. Written by authors uniquely qualified to address the specific requirements of advanced-level EMS training, this is a complete and essential resource in the margin. Introduces each chapter with a relevant case study and concludes the chapter with a follow-up to that same case study. Teaches critical thinking (Possibilities to Probabilities in Chapter 1). Applies critical thinking through interactive case studies (Chapter 13) Includes a Further Reading bibliography in each chapter. Contains appendices on pharmacology, normal lab data, and 12-lead ECG interpretation.

Strategies to Improve Cardiac Arrest Survival

**20-1111**

**20-2872**

**Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.**

Heartsaver First Aid Student Workbook

Pediatric First Aid, CPR, and AED is a first edition product for McGraw-Hill Higher Education. Part of a series of titles authored by the National Safety Council, Pediatric First Aid, CPR, and AED covers the material required in a Standard First Aid, CPR and AED course. The focus is teaching the layperson to recognize and act in any pediatric emergency and to sustain life until professional help can arrive. Quality content features information based on the current national guidelines for breathing and cardiac emergencies. O information includes bleeding control, and first aid for sudden illnesses and injuries. Focus is also on preventing injury and illness in children and the first aid for common illnesses and injuries that children sustain. Information is presented in a concise easy -to-read manner that works as a handy reference after the course.National Safety Council programs and products are designed to benefit all types of learning styles by combining lectures, video presentations, group discussions, and hands-on training. The required student text for the classroom-based Advanced Cardiovascular Life Support for Experienced Providers (ACLS EP) course, and an important reference for instructors. Full-color softcover, 480 pages, 8 1/2" x 11," plus the ACLS EP Systematic Approach Pocket Reference Card and the 2-card Advanced Cardiovascular Life Support (ACLS) Pocket Reference Card Set (90- 1012). Based on 2010 American Heart Association Guidelines for CPR and ECC.
