Alcoa produces and handles millions of pounds of molten aluminum every day.

Protecting employees against burns and setting their clothing on fire is a major

responsibility. A number of years ago, Alcoa set out to find secondary protective clothing

to prevent these potentially serious injuries.

To date, many fabrics and coatings have been tested by splashing with molten aluminum and bath on the sample; After all the testing,

The world's leading companies have realized that success in the long term requires them not only to make an economic profit, but also to contribute to the societies in which they operate. As a result Corporate Social Responsibility (CSR) has moved to the top of the business agenda. Yet questions remain.

Sceptics ask whether, provided an organization's activities conform to legislation, there is a business case for going beyond this. This unique Handbook from the Institute for Corporate Culture Affairs (ICCA) offers an invaluable combination of lessons learned and best practice for the future. It explores the general concept of CSR, investigates approaches to implementation and provides first-hand insights from well-known CEOs, academics and organizations. Above all it stresses the fact that CSR must

spring from a corporate culture, implying values and norms which in themselves endorse sustainable ways of doing business. Without this shift of emphasis from shareholder returns to sustainable value, CSR can never be more than a diversion. Featuring contributions from Ben Verwaayen (CEO, BT Group), Fujio Mitarai (President and CEO, Canon), Sir Geoffrey Chandler (Founder, Amnesty International Business Group) and Yoshio Shirai (Managing Director, Toyota), as well as experiences from inside

Decisions of the National Labor Board

Prior to the millennium, economists and policy makers argued that free trade between the United States and Mexico would benefit both Americans and Mexicans.

They believed that NAFTA would be a "win-win" proposition that would offer U.S. companies new markets for their products and Mexicans the hope of living in a more developed country with the modern conveniences of wealthier nations. Blending rigorous economic and statistical analysis with concern for the people affected, Mexican Women in American Factories offers the first

assessment of whether NAFTA has fulfilled these expectations by examining its socioeconomic impact on workers in a Mexican border town. Carolyn Tuttle led a group that interviewed 620 women maquila workers in Nogales, Sonora, Mexico. The responses from this representative sample refute many of the hopeful predictions made by scholars before NAFTA and reveal instead that little has improved for maquila workers. The women's stories make it plain that free trade has created more low-paying jobs in sweatshops where workers are exploited. Families of maquila workers live in one- or two-room houses with no running water, no drainage, and no heat. The multinational companies who operate the maquilas consistently break Mexican labor laws by

requiring women to work more than nine hours a day, six days a week, without medical benefits, while the minimum wage they pay workers is insufficient to feed their families. These findings will make a crucial contribution to debates over free trade, CAFTA-DR, and the impact of globalization.

This book presents the inventive genius behind technological breakthroughs by ten global companies including Alcoa, DaimlerChrysler, Honda, ST Micro and Visteon. Readers will gain understanding and insight into how cutting-edge technology is helping protect the climate and/or the ozone layer, while contributing to the company's bottom line. Each chapter chronicles the challenge and triumph of invention, introduces the

engineers and executives who overcome conventional wisdom, and demonstrates the contribution these companies are making to environmental protection. In full colour and crammed with graphics to illustrate the creative process of technological breakthroughs, the book is accessible and informative. The genius of these ten companies will inspire the engineer, the policy-maker, the student, the environmentalist, the CEO and the investor alike.
