Prevention Programs

Rural Communities

Adolescents undergo rapid physical, psychological and social developmental changes that result in unique management challenges, communication issues, patterns of disease and symptom presentation that are different from children or adults. This can be challenging for health professionals, who rarely have had specific training in dealing with the young people they meet in their clinical work. This book covers topics surrounding adolescent development, sexual behaviour and substance misuse, along with education and preventative strategies. It also features other adolescent health problems such as self-harm, eating disorders and psychosomatic presentations. This book is a valuable resource

Guidelines for Schools and Communities to Prevent the Use of Tobacco, Alcohol, and Other Drugs Among Children and Youth

Alcohol, Tobacco, and Other Drug Abuse Prevention Needs of the Louisiana Public High School Population, 1997

Although schools have the primary responsibility for educating children and adolescents, schools alone cannot prevent the use of tobacco, alcohol, and other drugs. Preventing youth from smoking, drinking, and using drugs must be a collaborative effort, jointly undertaken by the school, community, and youths themselves. This guide was developed to explain the partnerships that schools and communities can create to share the responsibilities of planning, funding, and implementing preventive strategies and programs. The first section presents a conceptual framework for planning by reviewing the extent of the substance abuse problem among youth, identifying misconceptions that lead to ineffective programs, defining drug use as a behavioral problem determined by many systems of influence, exploring the need for an integrated approach to prevention, identifying both risk and

protective factors within students' influence groups, formulating a new definition of prevention, and introducing a comprehensive health approach to drug prevention. The next section develops a leadership role for schools, explaining how to build a partnership among schools, law enforcement, and the community; identifying the planning steps; recommending a comprehensive program for the school site; considering community- and school-based program strategies; and listing criteria for preventive programs and curricula. The final three sections of the guide look briefly at the intervention plan, school policy, and program support. Relevant sections of California legal codes, resources, and references are appended. Prevention Works!

Outcome Based Planning for Alcohol, Tobacco, & Other Drug Prevention

Roughly 27 percent of the U.S. population lives in rural regions of the country. These citizens face challenges that city-dwellers and suburbanites do not. Geographic isolation, lack of available resources and activities, and a relative absence of anonymity lead many rural residents to turn to alcohol and other drugs. This guide includes a host of resources that we believe will help prevention specialists, teachers, health care providers, and others like you in a mutual quest for drug-free neighborhoods.

Using an evidence-based approach, *Drug Abuse Prevention: A School and Community Partnership, Third Edition* teaches students and practitioners the important concepts and skills needed to design effective drug prevention programs. Written to cover more than just the facts about drugs, this text provides a background of drug use and abuse, presents the principles and skills of prevention, with particular focus on adolescents and school settings, and reinforces the importance of schools forming community partnerships with key institutions and the application of policy tools to enhance the impact of education alone. Intervention

The Surgeon General's Report on Alcohol, Drugs, and Health Framework for a Statewide Comprehensive Alcohol, Tobacco and Other Drug Abuse Prevention System

The Effects of an Alcohol, Tobacco, and Other Drug Education/prevention Curriculum on Selected Risk Factors for Substance Abuse

All across the United States, individuals, families, communities, and health care systems are struggling to cope with substance use, misuse, and substance use disorders. Substance misuse and substance use disorders have devastating effects, disrupt the future plans of too many young people, and all too often, end lives prematurely and tragically. Substance misuse is a major public health challenge and a

priority for our nation to address. The effects of substance use are cumulative and costly for our society, placing burdens on workplaces, the health care system, families, states, and communities. The Report discusses opportunities to bring substance use disorder treatment and mainstream health care systems into alignment so that they can address a person's overall health, rather than a substance misuse or a physical health condition alone or in isolation. It also provides suggestions and recommendations for action that everyone—individuals, families, community leaders, law enforcement, health care professionals, policymakers, and researchers—can take to prevent substance misuse and reduce its consequences.
