Ukraine Investment and Business Guide Volume 1 Strategic and Practical Information

For the first time in one volume, Phil Edmonston, Canada's automotive "Dr. Phil," covers all used vehicles, packing this guide with insider tips to help the consumer make the safest and cheapest choice possible from cars and trucks of the past 25 years.

The Socialist Register has been at the forefront of intellectual enquiry and strategic debate on the left for five decades. This expertly curated collection analyzes technological innovation against the backdrop of the recurrent crises and forms of class struggle distinctive to capitalism. As we enter what some term the "fourth industrial revolution" and both mainstrea commentators and the left grapple with the implications of rapid technological development, this volume is a timely and crucial resource for those looking to build a political strategy attentive to sweeping changes in how we produce goods and live our lives.

This book results from a conference held in Singapore in September 2009 that brought together distinguished lawyers and economists to examine the differences and similarities in the intersection between intellectual property and competition laws in Asia. The prime focus was how best to balance these laws to improve economic welfare. Countries in Asia have different levels of development and experience with intellectual property and competition laws. Japan has the longest experience and now vigorously enforces both competition and intellectual property laws. Most other countries in Asia have only recently introduced intellectual property laws (due to the Trade-Related Aspects of Intellectual Property Rights (TRIPS) Agreement) and competition laws (sometimes due to the World Bank, International Monetary Fund or free trade agreements). It would be naïve to think that laws, even if similar on the surface, have the same goals or can be enforced similarly. Countries have differing degrees of acceptance of these laws, different economic circumstances and differing legal and political institutions. To set the scene, Judge Doug Ginsburg ,Greg Sidak, David Teece and Bill Kovacic look at the intersection of intellectual property and competition laws in the United States. Next are country chapters on Asia, each jointly authored by a lawyer and an economist. The country chapters outline the institutional background to the intersection in each country, discuss the policy underpinnings (theoretically as well as describing actual policy initiatives), analyse the case law in the area, and make policy prescriptions.

Stamped on products from coffee to handicrafts, the term "fair trade" has quickly become one of today's most seductive consumer buzzwords. Purportedly created through fair labor practices, or in ways that are environmentally sustainable, fair-trade products give buyers peace of mind in knowing that, in theory, how they shop can help make the world a better place.

Buying into Fair Trade turns the spotlight onto this growing trend, exploring how fair-trade shoppers think about their own altruism within an increasingly global economy. Using over 100 interviews with fair-trade consumers, national leaders of the movement, coffee farmers, and artisans, author Keith Brown describes both the strategies that consumers use to confront the moral contradictions involved in trying to shop ethically and the ways shopkeepers and suppliers reconcile their need to do good with the ever-present need to turn a profit. In addition to his in-depth analysis of the fair-trade market, Brown also provides a how-to chapter that outlines strategies readers can use to appear altruistic.This chapter highlights the ways that socially responsible markets have been detached from issues of morality. A fascinating account of how consumers first learn about, understand, and sometimes ignore the ethical implications of shopping, Buying into Fair Trade sheds new light on the potential for the fair trade market to reshape the world into a more socially-just place. Instructor's Guide

Lemon-Aid New and Used Cars and Trucks 1990-2015 steers the confused and anxious buyer through the purchase of new and used vehicles unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than 42 years, pulls no punches.

Culture, Morality, and Consumption

This book steers buyers through the the confusion and anxiety of new and used vehicle purchases unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than forty-five years, pulls no punches.

A comprehensive introduction to machine learning that uses probabilistic models and inference as a unifying approach. Today's Web-enabled deluge of electronic data calls for automated methods of data analysis. Machine learning provides these, developing methods that can automatically detect patterns in data and then use the uncovered patterns to predict future data. This textbook offers a comprehensive and self-contained introduction to the field of machine learning, based on a unified, probabilistic approach. The coverage combines breadth and depth, offering necessary background material on such topics as probability, optimization, and linear algebra as well as discussion of recent developments in the field, including conditional random fields, LI regularization, and deep learning. The book is written in an informal, accessible style, complete with pseudo-code for the most important algorithms. All topics are copiously illustrated with color images and worked examples drawn from such application domains as biology, text processing, computer vision, and robotics. Rather than providing a cookbook of different heuristic methods, the book stresses a principled model-based approach, often using the language of graphical models to specify models in a concise and intuitive way. Almost all the models described have been implemented in a MATLAB software package—PMTK (probabilistic modeling toolkit)—that is freely available online. The book is suitable for upper-level undergraduates with an introductory-level college math background and beginning graduate students.

Revealing the definitive history of the entire Mercedes-Benz G-Wagen series. Including SWB and LWB cars, station wagons, vans and convertibles, and with an overview of all the models sold in each of the world's major markets, this book is packed full of information and contemporary illustrations sourced directly from the Stuttgart factory.

How Demographic and Economic Changes Will Reinvent the Way Marketers Reach Consumers

«не важно, как вы рассматриваете свою деятельность в такси: как постоянную работу, как подработку или как хобби, давшее вам немного снять стресс и пообщаться с людьми. Важно совершенно другое – если вы решили устроиться таксистом в один из таксопарков, но пока еще сомневаетесь, думая, что это сложная и долгая процедура, вам стоит ознакомиться с рекомендациями, которые обязательно помогут.Итак, погнай!..»

Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation)Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underwayEthanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive EngineersGM's 2012 Volt electric car is a mixture of hype and hypocrisy Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki

Franklin, Jack, Maria, Thaduis, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job – no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundtrack, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other – or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.

As U.S. and Canadian automakers and dealers face bankruptcies and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

This book provides a unique historical and qualitative review of ten foreign automakers with plants in developed North America from their early beginnings to their export entry into North America. It seeks to expand the knowledge of American and Canadian policymakers pursuing a new foreign motor vehicle assembly plant or Foreign Direct Investment.

Over the past 40 years, neurobiology and computational neuroscience has proved that deeper understanding of visual processes in humans and non-human primates can lead to important advancements in computational perception theories and systems. One of the main difficulties that arises when designing automatic vision systems is developing a mechanism that can recognize - or simply find - an object when faced with all the possible variations that may occur in a natural scene, with the ease of the primate visual system. The area of the brain in primates that is dedicated at analyzing visual information is the visual cortex. The visual cortex performs a wide variety of complex tasks by means of simple operations. These seemingly simple operations are applied to several layers of neurons organized into a hierarchy, the layers representing increasingly complex, abstract intermediate processing stages. In this Research Topic we propose to bring together current efforts in neurophysiology and computer vision in order 1) To understand how the visual cortex encodes an object from a starting point where neurons respond to lines, bars or edges to the representation of an object at the top of the hierarchy that is invariant to illumination, size, location, viewpoint, rotation and robust to occlusions and clutter; and 2) How the design of automatic vision systems benefit from that knowledge to get closer to human accuracy, efficiency and robustness to variations.

Offers advice for prospective buyers of cars and trucks, reveals information on secret warranties and confidential service bulletins, and tells how to complain and get results.

This compendium of everything thats new in cars and trucks is packed with feedback from Canadian drivers, insider tips, internal service bulletins, and confidential memos to help the consumer select whats safe, reliable, and fuel-frugal.

Women Respond to War: Easyread Large Edition

Buyographics follows eleven Ameri can families and explores how their life decisions impact consumer behavior. This is not just a data book, because each of these numbers – in datasets big and small – is a person. As you read their stories, trends come to life and provide a greater understanding of how to reach your target.

Award-winning author MariJo Moore asked women from around the world to consider the devastating nature of conflict – inner wars, outer wars, public battles, and personal losses. Their answers, in the form of poignant poetry and essays, examine war in all its permutations, beginning in 60ce and continuing into the twenty-first century, from Ireland to Iraq and everywhere in between. This moving anthology, with contributions from Paula Gunn Allen, Amy Goodman, and many others, encompasses a wide range of voices – a Blitz evacuee, an ex-slave, an incarcerated mother, former military personnel, survivors of domestic violence, those who have battled drugs and disease – all sharing their unique and timeless insight on the realities of war.

In 2018 almost half of all vehicles made in North America were produced at foreign-owned plants, and the sector was on track to monopolize the market. Despite this, the industry has been overlooked compared with its domestic counterpart, both in scholarship and popular memory. Redressing this neglect, America's Other Automakers provides a new history of the foreignowned auto sector, the first to extensively draw on archival sources and to articulate the human agency of participants, including workers, managers, and industry recruiters. Timothy J. Minchin challenges the view that the industry's growth primarily reflected incentives, stressing human agency and the complexity of individual stories instead. Deeply human in its approach, the book also explores the industry's impact on grassroots communities, showing that it had more costs than supporters acknowledged.

Drawing on a wide range of primary and secondary sources, America's Other Automakers uncovers significant tensions over unionization, reports of discriminatory hiring, and unease about the industry's rapid growth, critically exploring seven large assembly facilities and their impact on the communities in which they were built.

Includes retail data on domestic and imported cars, trucks, and vans; acceptable mileage ranges; and costs of specific optional factory features.

This textbook introduces students to the important concepts of global marketing today, and their managerial implications. Designed to be shorter than many other textbooks, Global Marketing focuses on getting to the point faster. Increasingly, marketing activities must be integrated at a global level. Yet, the enduring influence of culture requires marketers to adapt local strategies in light of cultural differences. Global Marketing takes a similar strategic approach, recognizing the need to address both the forces of globalization and those of localization. Other key features include: Coverage of often overlooked topics, such as the competitive rise of China's state-owned enterprises; the importance of diasporas as target markets; and the emerging threat to legitimate marketers from transnational criminal organizations A chapter dedicated to understanding global and local competitors, setting the stage for ongoing discussion of both buyers and competitors in an increasingly competitive global marketplace Extensive real-life examples and cases from developed and emerging markets, including insights into the often-overlooked markets of Africa, Latin America, and the Middle East Written in a student-friendly style, previous editions have received praise from both students and instructors. This edition continues to build on this strong foundation, making this the book of choice for students of global marketing classes.

"One of NPR's "Books We Love 2011"" "I came to see the mountains as an outpouring of our modern lives," Roy writes, "of the endless chase for our desires to fill us." Readers of Behind the Beautiful Forever will be drawn to this harrowing portrait." —Publishers Weekly "Castaway Mountain deserves every accolade. A stunning achievement." —Kiran Desai, Booker Prize Winner, author of Inheritance of Loss. All of Mumbai's possessions and memories come to die at the Deonar garbage mountains. Towering at the outskirts of the city, the mountains are covered in a faint smog from trash fires. Over time, as wealth brought Bollywood knock offs, fast food and plastics to Mumbaikars, a small, forgotten community of migrants and rag-pickers came to live at the mountains' edge, making a living by re-using, recycling and re-selling. Among them is Farzana Ali Shaikh, a tall, adventurous girl who soon becomes one of the best pickers in her community. Over time, her family starts to fret about Farzana's obsessive relationship to the garbage. Like so many in her community, Farzana, made increasingly sick by the trash mountains, is caught up in the thrill of discovery—because among the broken glass, crushed cans, or even the occasional dead baby, there's a lingering chance that she will find a treasure to lift her family's fortunes. As Farzana enters adulthood, her way of life becomes more precarious. Mumbai is pitched as a modern city, emblematic of the future of India, forcing officials to reckon with closing the dumping grounds, which would leave the waste pickers more vulnerable than ever. In a narrative insilled with superstition and magical realism, Saumya Roy crafts a modern parable exploring the consequences of urban overconsumption. A moving testament to the impact of fickle desires, Castaway Mountain reveals that when you own nothing, you know where true value lies: in family, community and love. Interior map illustration copyright (c) Jake Coolidge

With regard to both the environmental sustainability and operating efficiency demands, modern combustion research has to face two main objectives, the optimization of combustion efficiency and the reduction of pollutants. This book reports on the combustion research activities carried out within the Collaborative Research Center (SFB) 568 "Flow and Combustion in Future Gas Turbine Combustion Chambers" funded by the German Research Foundation (DFG). This aimed at designing a completely integrated modeling and numerical simulation of the occurring very complex, coupled and interacting physico-chemical processes, such as turbulent heat and mass transport, single or multi-phase flows phenomena, chemical reactions/combustion and radiation, able to support the development of advanced gas turbine chamber concepts

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

A Weekly Newspaper Representing the Industrial Interests of the United States

Long known as the "City of Elms and Roses," LaGrange, founded in 1828, nestles among the rolling hills of western Georgia. The name pays tribute to the Marquis de Lafayette, a hero of the American Revolution who passed through this area in 1825, and memorializes his estate in France, the Chateau de la Grange-Bléneau.

In its almost 200-year history, the town has grown from an educational center to a textile hub and is now a home to diverse industry. Many prominent people have called LaGrange home—from Benjamin Harvey Hill and Horace King in the 19th century to Lamar Dodd and the Callaway family in the 20th century.

Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car -and- truck book on the market. "Dr. Phil," along with George Iry and the Editors of the Automobile Protection Association, pull no punches.

MEMS Materials and Processes Handbook" is a comprehensive reference for researchers searching for new materials, properties of known materials, or specific processes available for MEMS fabrication. The content is separated into distinct sections on "Materials" and "Processes". The extensive Material Selection Guide and a "Material Database" guides the reader through the selection of appropriate materials for the required task at hand. The "Processes" section of the book is organized as a catalog of various microfabrication processes, each with a brief introduction to the technology, as well as examples of common uses in MEMS.
