In *Who Is the Dreamer Who Dreams the Dream? A Study of Psychic Presences*, James Grotstein integrates some of his most important work of recent years in addressing fundamental questions of human psychology and spirituality. He explores two quintessential and interrelated psychoanalytic problems: the nature of the unconscious mind and the meaning and inner structure of human subjectivity. To this end, he teases apart the complex, tangled threads that constitute self-experience, delineating psychic presences and mystifying dualities, subjects with varying perspectives and functions, and objects with different, often phantasmagoric properties. Whether he is expounding on the Unconscious as a range of dimensions understandable in terms of nonlinear concepts of chaos, complexity, and emergence theory; modifying the psychoanalytic concept of psychic determinism by joining it to the concept of

autochthony; comparing Melanie Klein's notion of the archaic Oedipus complex with the ancient Greek myth of the labyrinth and the Minotaur; or examining the relationship between the stories of Oedipus and Christ, Grotstein emerges as an analyst whose clinical sensibility has been profoundly deepened by his scholarly use of mythology, classical thought, and contemporary philosophy. The result is both an important synthesis of major currents of contemporary psychoanalytic thought and a moving exploration of the nature of human suffering and spirituality. Showcases recent research by leading scholars working within the relevance-theoretic pragmatics framework.

Agent-based modelling enables the explicit representation of entities and their interaction with each other and the environment, and so it became an important method to study complex systems. Social networks form an important part of agent-based social simulation, as they define the topology of agent interaction. This dissertation initially identifies important properties of social networks and their dynamics and reviews their representation in agent-based models of relevant domains. A classification of levels of detail for the network modelling components initialisation, dynamics of networks, and dynamics on networks is proposed and guides the identification of deficits. A formal, iterative evaluation framework is developed to quantitatively assess network modelling approaches under a set of weighted criteria (representativity, adjustability, validity, and efficiency). The framework is applied to an abstract model of opinion dynamics and to an empirically grounded model of social influence. A lifestyle-specific network survey is designed, conducted, and analysed and helps to ground the evaluation of the network modelling's representativity on empirical data. The study finds significant differences of degree and distance distributions as well as in the composition of ego networks between lifestyles. New network modelling approaches are developed to account for requirements in agent-based models such as agent-type specific link preferences, degree and distance distributions, community structures, and interaction

dynamics. The comparison of simple to elaborated network modelling for the application models shows a significant impact on simulation results, highlighting the need for informed decisions about suitable approaches.

The instant Wall Street Journal, USA Today, and international bestseller “While the history books are filled with tales of obsessive visionary geniuses who remade the world in their image with sheer, almost irrational force, I’ve found that history is also made by individuals who fought their egos at every turn, who eschewed the spotlight, and who put their higher goals above their desire for recognition.” —from the prologue Many of us insist the main impediment to a full, successful life is the outside world. In fact, the most common enemy lies within: our ego. Early in our careers, it impedes learning and the cultivation of talent. With success, it can blind us to our faults and sow future problems. In failure, it magnifies each blow and makes recovery more difficult. At every stage, ego holds us back. Ego Is the Enemy draws on a vast array of stories and examples, from literature to philosophy to history. We meet fascinating figures such as George Marshall, Jackie Robinson, Katharine Graham, Bill Belichick, and Eleanor Roosevelt, who all reached the highest levels of power and success by conquering their own egos. Their strategies and tactics can be ours as well. In an era that glorifies social media, reality TV, and other forms of shameless self-promotion, the battle against ego must be fought on many fronts. Armed with the lessons in this book, as Holiday writes, “you will be less invested in the story you tell about your own specialness, and as a result, you will be liberated to accomplish the world-changing work you’ve set out to achieve.”

Inspector John Rebus has messed up badly this time, so badly that he's been sent to a kind of reform school for damaged cops. While there among the last-chancers known as "resurrection men," he joins a covert mission to gain evidence of a drug heist orchestrated by three of his classmates. But the group has been assigned an unsolved murder that may have resulted from Rebus's own mistake. Now Rebus can't determine if he's been set up for a fall or if his disgraced classmates are as ruthless as he suspects. When Detective Sergeant Siobhan Clarke discovers that her investigation of an art dealer's murder is tied to Rebus's inquiry, the two protagonists and mentor join forces. Soon they find themselves in the midst of an even bigger scandal than they had imagined—a plot with conspirators in every corner of Scotland and deadly implications about their colleagues. Self-individualization has been interpreted as the process in which the all-embracing Self unfolds into an infinite variety of different individuals, plants, animals and men. A comparison of the different ways in which the Self manifests itself in the biological and psychological developmental processes, or in a visionary image of the undivided Self, reveals the same basic structure of expression. The Self, the one, is represented by a circular domain, and comprises a basic inner duality, the two, creating a paradox of conflicting opposites. In the undivided Self the two give rise to a trinity in which, however, a quaternity is hidden. The latter expresses itself in this world

as the four basic forces, the four Elements or the four main archetypes, specifying the possibilities or development in space and time. Self-individualization starts with the first appearance of a primary structure of an individual sub-Self. This is the fifth basic force, the fifth Element. Further development is characterized by four generative principles: 1st, the principle of wholeness: connection and integration (being oriented to remaining whole or restoring wholeness); 2nd, the principle of complementarity and compensation (a periodic shift between opposing influences); 3rd, the enstructuring principle (causing the relative stability of the spatial appearance of the manifest structure), and 4th, the principle of gesture (resulting in a gradual stepwise development of that structure into a full-grown individual).

Working at the intersections of a wide range of fields - including fan studies and film analysis, cultural studies and fantasy/sci-fi theory - the authors demonstrate how the particularities of the connection between Shakespeare and geek culture generate new insights into the plays, poems and their larger cultural legacy in the 21st century.

Stephen G. Walker, Akan Malici, and Mark Schafer present a definitive, social-psychological approach to integrating theories of foreign policy analysis and international relations—addressing the agent-centered, micro-political study of decisions by leaders and the structure-oriented, macro-political study of state interactions as a complex adaptive system. The links between the internal world of beliefs and the external world of events provide the strategic setting in which states collide and leaders decide. The first part of this ground-breaking book establishes the theoretical framework of neobehavioral IR, setting the stage for the remainder of the work to apply the framework to pressing issues in world politics. Through these applications students can see how a game-theoretic logic can combine with the operational code research program to innovatively combine levels of analysis. The authors employ binary role

theory to demonstrate that relying only on a state-systemic level or an individual-decision making level of analysis leads to an incomplete picture of how leaders steer their ships of state through the hazards of international crises to establish stable relations of cooperation or conflict.
