*This study offers new insights into what renders management accounting concepts (MACs) fluid. Extant literature depicts how fluidity is an effect of heterogeneous associations among actors, which translate and mobilize them in situated and variegated forms. This focus on heterogeneous arrangements, however, tends to neglect the role of practices and how these practices render MACs fluid. Hence, the study investigates how practices, together with arrangements, which Schatzki (2002) refers to as "site" (i.e., a mesh-work of practice-arrangement bundles), are implicated in MACs' fluidity. To do so, an ethnography of the MAC "Enterprise Risk Management" (ERM) at the largest division of a multi-national manufacturer was conducted. By analyzing attended risk meetings, the paper shows the ways in which the ERM site prefigures*

*multitudinous paths for carrying on and carrying out risk management activities, which in turn, render the ERM site into a fluid space of intelligibility. These findings indicate that MACs' fluidity is associated with multidimensional prefigurements that the site produces. With these insights, the paper contributes to understanding how the situated functionality of management accounting comes about, and reveals nuances and multiplicities amid the enabling and constraining space for actions that practiced MACs as mesh-work engender.*

*This book brings together a selection of June Pallot's most significant work. Written from a country (New Zealand) that led the world in many aspects of its financial management reforms, this work provides thoughtful comment on matters that remain of crucial importance today, especially the constitutional need to carefully monitor and respond to the reform initiatives and motives of executive government. Revisiting accounting issues and developments in the public sector, and reminding readers that the fundamental purpose of government accounting is different from that for the business sector, this book provides a timely reminder of the need for caution when considering the application in the public sector of accounting techniques devised for business purposes. June Pallot's legacy challenges accountants in the public sector to find better ways of addressing "collective decision-making under new governance approaches", proposes ways forward and offers suggestions for future research. This book, prepared by her colleague Susan Newberry, is a tribute to June's work.*
