**Publishers Weekly Most Anticipated Books of Fall 2019 A New York Times Editor's Pick People Best Books Fall 2019 Chicago Tribune 28 Books You Need to Read Now Booklist's Top Ten Sci-Tech Books of 2019 "It blew my mind to discover that teenage animals and teenage humans are so similar. Both are naive risk-takers. I loved this book!" —Temple Grandin, author of Animals Make Us Human and Animals in Translation A revelatory investigation of human and animal adolescence and young adulthood from the New York Times bestselling authors of Zoobiquity. With Wildhood, Harvard evolutionary biologist Barbara Natterson-Horowitz and award-winning science writer Kathryn Bowers have created an entirely new way of thinking about the crucial, vulnerable, and exhilarating phase of life between childhood and adulthood across the animal kingdom. In their critically acclaimed bestseller, Zoobiquity, the authors revealed the essential connection between human and animal health. In Wildhood, they turn the same eye-opening, species-spanning lens to adolescent young adult life. Traveling around the world and drawing from their latest research, they find that the same four universal challenges are faced by every adolescent human and animal on earth: how to be safe, how to navigate hierarchy; how to court potential mates; and how to feed oneself. Safety. Status. Sex. Self-reliance. How human and animal adolescents and young adults confront the challenges of wildhood shapes their adult destinies. Natterson-Horowitz and Bowers illuminate these core challenges through the lives of four animals in the wild: Ursula, a young king penguin; Shrink, a charismatic hyena; Salt, a matriarchal humpback whale; and Slavic, a roaming European wolf. Through their riveting stories—and those of countless others, from adventurous eagles and rambunctious high schooler to inexperienced orcas and naive young soldiers—readers get a vivid and game-changing portrait of adolescent young adults as a horizontal tribe, sharing behaviors and challenges, setbacks and triumphs. Upending our understanding of everything from risk-taking and anxiety to the origins of privilege and the nature of sexual coercion and consent, Wildhood is a profound and necessary guide to the perilous, thrilling, and universal journey to adulthood on planet earth.**

**Nature speaks to us every day but we have forgotten how to listen. From the author of the best-selling Animal Speak comes the next step in understanding the meaning and language of animals. Discover the meaning of animals in dreams and life. Learn how to interpret the signs of nature. Find your animal guardians and messengers and awaken the inner totem pole. Through this book, you truly will become animal-wise.**

**Cass Sunstein and Martha Nussbaum bring together an all-star cast of contributors to explore the legal and political issues that underlie the campaign for animal rights and the opposition to it. Addressing ethical questions about ownership, protection against unjustified suffering, and the ability of animals to make their own choices free from human control, the authors offer numerous different perspectives on animal rights and animal welfare. They show that whatever one's ultimate conclusions, the relationship between human beings and nonhuman animals is being fundamentally rethought. This book offers a state-of-the-art treatment of that rethinking.**

**The third little animal puts on his leaf clothes and goes to the city searching for the other two, only everyone looks alike in street clothes.**

Animal Wise - Why is a polar bear white? Why is a parrot so bright? The answer is adaptation! Brilliant illustrations and lyrical text answer reader questions about why animals look in similar and different ways.

Examines the emergence and causes of new diseases all over the world, describing a process called "spillover" where illness originates in wild animals before being passed to human potential for the next huge pandemic. 70,000 first printing.

An Indie Next List Pick! "A glorious tribute to Brown's timeless classic." —Booklist (starred review) Perfect for fans of Goodnight Moon, The Runaway Bunny, and Big Red Barn, this published picture book from beloved children's book author Margaret Wise Brown tells the comforting, snowy story of animals seeking shelter from the cold in a big warm barn. Br beautiful life by Caldecott Medalist and multiple award-winner Jerry Pinkney, this is a must-have for every child's library and is perfect for cozy wintertime readings. Outside in the wind rattle, come to the barn, keep warm with the cattle...

For decades, the world's governments have struggled to move from talk to action on climate. Many now hope that growing public concern will lead to greater policy ambition, but promoted strategy to address the climate crisis – the use of market-based programs – hasn't been working and isn't ready to scale. Danny Cullenward and David Victor show how creating and maintaining market-based policies render them ineffective nearly everywhere they have been applied. Reforms can help around the margins, but markets' problems are won't disappear with increasing demand for climate solutions. Facing that reality requires relying more heavily on smart regulation and industrial policy – government-led strategies the transformation that markets promise, but rarely deliver.

Chimpanzee Rights  
A Novel

*All traditions taught the significance of Nature - particularly of the animals crossing our paths, whether we are awake or dreaming. The Animal-Wise Tarot aims to develop your intuition, strengthen your connection to the animal world and to find the answers to questions in life.*

*Looks at the interactions that have occurred between scientists and animal subjects and explains what is being discovered about how and what animals think and feel and the ethical questions that these new findings are raising.*

*New York Times best-selling author and primatologist Frans de Waal explores the fascinating world of animal and human emotions. Frans de Waal has spent four decades at the forefront of animal research. Following up on the best-selling Are We Smart Enough to Know How Smart Animals Are?, which investigated animal intelligence, Mama's Last Hug delivers a fascinating exploration of the rich emotional lives of animals. Mama's Last Hug begins with the death of Mama, a chimpanzee matriarch who formed a deep bond with biologist Jan van Hooff. When Mama was dying, van Hooff took the unusual step of visiting her in her night cage for a last hug. Their goodbyes were filmed and went viral. Millions of people were deeply moved by the way Mama embraced the professor, welcoming him with a big smile while reassuring him by patting his neck, in a gesture often considered typically human but that is in fact common to all primates. This story and others like it form the core of de Waal's argument, showing that humans are not the only species with the capacity for love, hate, fear, shame, guilt, joy, disgust, and empathy. De Waal discusses facial expressions, the emotions behind human politics, the illusion of free will, animal sentience, and, of course, Mama's life and death. The message is one of continuity between us and other species, such as the radical proposal that emotions are like organs: we don't have a single organ that other animals don't have, and the same is true for our emotions. Mama's Last Hug opens our hearts and minds to the many ways in which humans and other animals are connected, transforming how we view the living world around us.*

*Clinical Biochemistry of Domestic Animals, Second Edition, Volume I, is a major revision of the first edition prompted by the marked expansion of knowledge in the clinical biochemistry of animals. In keeping with this expansion of knowledge, this edition is comprised of two volumes. Chapters on the pancreas, thyroid, and pituitary-adrenal systems have been separated and entirely rewritten. Completely new chapters on muscle metabolism, iron metabolism, blood clotting, and gastrointestinal function have been added. All the chapters of the first edition have been revised with pertinent new information, and many have been completely rewritten. This volume contains 10 chapters and opens with a discussion of carbohydrate metabolism and associated disorders. Separate chapters follow on lipid metabolism, plasma proteins, and porphyrins. Subsequent chapters deal with liver, pancreatic, and thyroid functions; the role of the pituitary and adrenal glands in health and disease; the function of calcium, inorganic phosphorus, and magnesium metabolism in health and disease; and iron metabolism.*

The author of *Straw Dogs*, famous for his provocative critiques of scientific hubris and the delusions of progress and humanism, turns his attention to cats—and what they reveal about humans' torturous relationship to the world and to themselves. The history of philosophy has been a predictably tragic or comical succession of palliatives for human disquiet. Thinkers from Spinoza to Berdyaev have pursued the perennial questions of how to be happy, how to be good, how to be loved, and how to live in a world of change and loss. But perhaps we can learn more from cats--the animal that has most captured our imagination--than from the great thinkers of the world. In *Feline Philosophy*, the philosopher John Gray discovers in cats a way of living that is unburdened by anxiety and self-consciousness, showing how they embody answers to the big questions of love and attachment, mortality, morality, and the Self: Montaigne's house cat, whose un-examined life may have been the one worth living; Meo, the Vietnam War survivor with an unshakable capacity for "fearless joy"; and Colette's Saha, the feline heroine of her subversive short story "The Cat", a parable about the pitfalls of human jealousy. Exploring the nature of cats, and what we can learn from it, Gray offers a profound, thought-provoking meditation on the follies of human exceptionalism and our fundamentally vulnerable and lonely condition. He charts a path toward a life without illusions and delusions, revealing how we can endure both crisis and transformation, and adapt to a changed scene, as cats have always done.

Since 2013, an organization called the Nonhuman Rights Project has brought before the New York State courts an unusual request—asking for habeas corpus hearings to determine whether Kiko and Tommy, two captive chimpanzees, should be considered legal persons with the fundamental right to bodily liberty. While the courts have agreed that chimpanzees share emotional, behavioural, and cognitive similarities with humans, they have denied that chimpanzees are persons on superficial and sometimes conflicting grounds. Consequently, Kiko and Tommy remain confined as legal "things" with no rights. The major moral and legal question remains unanswered: are chimpanzees mere "things", as the law currently sees them, or can they be "persons" possessing fundamental rights? In *Chimpanzee Rights: The Philosophers' Brief*, a group of renowned philosophers considers these questions. Carefully and clearly, they examine the four lines of reasoning the courts have used to deny chimpanzee personhood: species, contract, community, and capacities. None of these, they argue, merits disqualifying chimpanzees from personhood. The authors conclude that when judges face the choice between seeing Kiko and Tommy as things and seeing them as persons—the only options under current law—they should conclude that Kiko and Tommy are persons who should therefore be protected from unlawful confinement "in keeping with the best philosophical standards of rational judgment and ethical standards of justice." *Chimpanzee Rights: The Philosophers' Brief*—an extended version of the amicus brief submitted to the New York Court of Appeals in Kiko's and Tommy's cases—goes to the heart of fundamental issues concerning animal rights, personhood, and the question of human and nonhuman nature. It is essential reading for anyone interested in these issues.

*In a world where we usually measure animals by human standards, prize-winning author and MacArthur Fellow Carl Safina takes us inside their lives and minds, witnessing their profound capacity for perception, thought and emotion, showing why the word "it" is often inappropriate as we discover who they really are. Weaving decades of observations of actual families of free-living creatures with new discoveries about brain functioning, Carl Safina's narrative breaches many commonly held boundaries between humans and other animals. In *Beyond Words*, readers travel the wilds of Africa to visit some of the last great elephant gatherings, then follow wolves of Yellowstone*

*National Park sort out the aftermath of their personal tragedy, then plunge into the astonishingly peaceful society of killer whales living in waters of the Pacific Northwest. We spend quality time, too, with dogs and falcons and ravens; and consider how the human mind originated. In his wise and passionate new book, Safina delivers a graceful examination of how animals truly think and feel, which calls to question what really does—and what should—make us human.*

*The New York Times Bestseller that explores animal intelligence and will alter the way we as humans view other species. Have you ever wondered what it is like to be a fish? Or a parrot, dolphin, or an elephant? Do they experience thoughts that are similar to ours, or have feelings of grief and love? These are tough questions, but scientists are answering them. They know that ants teach and rats love to be tickled. They've discovered that dogs have thousand-word vocabularies and that birds practice their songs in their sleep. But how do scientists know these things? Animal Wise takes us on a dazzling odyssey into the inner world of animals and among the pioneering researchers who are leading the way into once-uncharted territory: the animal mind. Morell uses her formidable gifts as a storyteller to transport us to field sites and laboratories around the world, introducing us to animal-cognition scientists and their surprisingly intelligent and sensitive subjects. She explores how this rapidly evolving, controversial field has only recently overturned old notions about why animals behave as they do. In this surprising and moving book, Morell brings the world of nature brilliantly alive in a nuanced, deeply felt appreciation of the human-animal bond.*

*All animals are equal but some animals are more equal than others. It's just an ordinary farm - until the animals revolt. They get rid of the irresponsible farmer. The other animals are sure that life is improving, but as systems are replaced and half-truths are retold, a new hierarchy emerges . . . Orwell's tale of propaganda, power and greed has never felt more pertinent. With an exciting new cover and inside illustrations by superstar Chris Mould.*

*From national bestselling author Nick McDonell, The Council of Animals is a captivating fable for humans of all ages—dreamers and cynics alike—who believe (if nothing else) in the power of timeless storytelling. “‘Now,’ continued the cat, ‘there is nothing more difficult than changing an animal’s mind. But I will say, in case I can change yours: humans are more useful to us outside our bellies than in.’” Perhaps. After The Calamity, the animals thought the humans had managed to do themselves in. But, it turns out, a few are cowering in makeshift villages. So the animals—among them a cat, a dog, a crow, a baboon, a horse, and a bear—have convened to debate whether to help the last human stragglers . . . or to eat them. Rest assured, there is a happy ending. Sort of. Featuring illustrations by Steven Tabbutt*

Dog-Mas is filled with lighthearted illustrations and delightfully poignant messages that focus on finding more time to play, being inquisitive, and sniffing around for the good things in life.**

**The scholar and author of An American Trilogy makes the case to establish legal rights for chimpanzees and bonobos. Rattling the Cage explains how the failure to recognize the basic legal rights of chimpanzees and bonobos in light of modern scientific findings creates a glaring contradiction in our law. In this witty, moving, persuasive, and impeccably researched argument, Wise demonstrates that the cognitive, emotional, and social capacities of these apes entitle them to freedom from imprisonment and abuse. “The animals’ Magna Carta.” –Jane Goodall, from the Foreword “This is an impassioned, fascinating, and in many ways startling book.” –Cass Sunstein, New York Times Book Review “One of those rare books that are deeply troubling in the best sense of the word, intellectually and ethically.” –Edward O. Wilson, Harvard University “Path-breaking...Every lawyer, every judge, and every legislator should read this book.” –Peter Singer, Princeton University “Documenting the treatment of our close primate cousins, which are routinely kidnapped for biomedical research, slaughtered for their meat and caged in roadside zoos, Wise notes that chimpanzees and bonobos are nearing annihilation . . . . This impassioned, closely argued brief presents a formidable challenge to the treatment of animals perpetrated by agribusiness, scientific research, the pharmaceutical industry, hunters, live-animal traders and others. It’s a clarion call for rethinking the animal-human relationship.” –Publishers Weekly**

**NEW YORK TIMES BESTSELLER • Every kind of animal, including humans, is enclosed within its own unique sensory bubble, perceiving but a tiny sliver of our immense world. Pulitzer Prize-winning science journalist Ed Yong takes us on “a thrilling tour of nonhuman perception” (The New York Times), allowing us to experience the skeins of scent, waves of electromagnetism, and pulses of pressure that other animals perceive. “One of this year’s finest works of narrative nonfiction . . . Yong’s reporting is layered, seasoned with vivid scenes from**

laboratories and in the field, interviews with researchers across a spectrum of disciplines.”—Oprah Daily “A dazzling ride through the sensory world of astoundingly sophisticated creatures.”—The Wall Street Journal The Earth teems with sights and textures, sounds and vibrations, smells and tastes, electric and magnetic fields. In *An Immense World*, Ed Yong coaxes us beyond the confines of our own senses to encounter beetles that are drawn to fires, turtles that can track the Earth’s magnetic fields, fish that fill rivers with electrical messages, and even humans who wield sonar like bats. We discover that a crocodile’s scaly face is as sensitive as a lover’s fingertips, that the eyes of a giant squid evolved to see sparkling whales, that plants thrum with the inaudible songs of courting bugs, and that even simple scallops have complex vision. We learn what bees see in flowers, what songbirds hear in their tunes, and what dogs smell on the street. We listen to stories of pivotal discoveries in the field, while looking ahead at the many mysteries that remain unsolved. Funny, rigorous, and suffused with the joy of discovery, *An Immense World* takes us on what Marcel Proust called “the only true voyage . . . not to visit strange lands, but to possess other eyes.”

Considers the cognitive abilities of animals along the evolutionary spectrum, identifies where the line for rights is currently drawn and which animals meet exemption criteria, and considers the work of prominent animal experts.

What makes owls wise and foxes sly? How did the lion become the king of beasts, and why do serpents symbolize evil? This survey of legends, folk tales, myths, and superstitions chronicles the human fascination with the animal kingdom. Assembled by a noted naturalist, Ruth Binney, this charmingly illustrated collection abounds in animal lore from around the world and throughout history. Binney provides captivating examples of attempts to explain nature's wonders and mysteries with animal-related proverbs and folk wisdom. She explores the historic associations of wild and domestic animals with kindling romance, bringing good and bad luck, and fostering improved health, as well as their roles in forecasting weather and serving as omens of everything from sudden wealth to imminent death. A gallery of mythical figures features dragons, werewolves, mermaids, and other creatures with supernatural powers. Brimming with enchantment, this compilation of folkloric traditions will delight animal lovers of every stripe!

Stories for children.

By the big red barn In the great green field, There was a pink pig Who was learning to squeal. There were horses and sheep and goats and geese--and a jaunty old scarecrow leaning on his hoe. And they all lived together by the big red barn. In joyous and exuberant Pictures, Felicia Bond lovingly evokes Margaret Wise Brown's simple, rhythmic text about the cycle of a day on a farm, where a family of animals peacefully plays and sleeps. In the barnyard there are roosters and cows, horses and goats, and a pink piglet who is learning to squeal. Margaret Wise Brown's lulling story about a day in the life of a barnyard is now available as a sturdy board book. Felicia Bond's atmospheric illustrations add to the tranquil simplicity of this story.

Open your heart and mind to the wisdom of the animal world. Animal Speak provides techniques for recognizing and interpreting the signs and omens of nature. Meet and work with animals as totems and spirit guides by learning the language of their behaviors within the physical world. Animal Speak shows you how to: Identify, meet, and attune to your spirit animals Discover the power and spiritual significance of more than 100 different animals, birds, insects, and reptiles Call upon the protective powers of your animal totem Create and use five magical animal rites, including shapeshifting and sacred dance This beloved, bestselling guide has become a classic reference for anyone wishing to forge a spiritual connection with the majesty and mystery of the animal world.

Animal WiseThe Thoughts and Emotions of Our Fellow CreaturesCrown Pub

Animals are conscious beings that form their own perspective regarding the lifeworlds in which they exist, and according to which they act in relation to their species and other animals. In recent decades a thorough transformation in societal research has taken place, as many groups that were previously perceived as being passive or subjugated objects have become active subjects. This fundamental reassessment, first promoted by feminist and radical studies, has subsequently been followed by spatial and material turns that have brought non-human agency to the fore. In human-animal relations, despite a power imbalance, animals are not mere objects but act as agents. They shape our material world and our encounters with them influence the way we think about the world and ourselves. This book focuses on animal agency and interactions between humans and animals. It explores the reciprocity of human-animal relations and the capacity of animals to act and shape human societies. The chapters draw on examples from the Global North to explore how human life in modernity has been and is shaped by the sentience, autonomy, and physicality of various animals, particularly in landscapes where communities and wild animals exist in close proximity. It offers a timely contribution to animal studies, environmental geography, environmental history, and social science and humanities studies of the environment more broadly.

Describes animal movement and why it's important to their survival.
