Politics in Alaska have changed significantly since the last major book on the subject was published more than twenty years ago, with the rise and fall of Sarah Palin and the rise and fall of oil prices being but two of the many developments to alter the political landscape. This book, the most comprehensive on the subject to date, focuses on the question of how beliefs, institutions, personalities, and power interact to shape Alaska politics and public policy. Drawing on these interactions, the contributors explain how and why certain issues get dealt with successfully and others

Poorly performing schools and inadequate social services.

These are common complaints in cities, which too often struggle just to keep the lights on, much less make the long-term investments necessary for future generations. It doesn't have to be this way. This book by two internationally recognized experts in public finance describes a new way of restoring economic vitality and financial stability to cities, using steps that already have been proven remarkably successful. The key is unlocking social, human, and economic wealth that cities already own but is out of sight—or

hidden. A focus on existing public wealth helps to shift attention and resources from short-term spending to longer-term investments that can vastly raise the quality of life for many generations of urban residents. A crucial first step is to understand a city's balance sheet—too few cities comprehend how valuable a working tool this can be. With this in hand, taxpayers, politicians, and investors can better recognize the long-term consequences of political decisions and make choices that mobilize real returns rather than rely on more taxes, debt, or austerity. Another hidden asset

is real estate. Even poor cities own large swathes of poorly utilized land, or they control underperforming utilities and other commercial assets. Most cities could more than double their investments with smarter use of these commercial assets. Managing the city's assets smartly through the authors' proposed Urban Wealth Funds—at arm's-length from short-term political influence—will enable cities to ramp up much needed infrastructure investments.

reshaping China and the global economy. China's urbanization also carries a certain mystique, which has long fascinated generations of scholars and journalists alike. As it has turned out, many of the asserted Chinese feats are mostly fancied claims or gross misinterpretations (of statistics, for example). There does exist, however, an urbanization that displays rather uncommon "Chinese" characteristics that remain to inadequately understood. Building on his three decades of careful research, Professor Kam Wing Chan expertly dissects the complexity of China's hukou system, migration, urbanization and their interrelationships in this set of journal articles published in the last ten years. These works range from seminal papers on Chinese urban definitions and statistics; and broad-perspective analysis of the hukou system of its first semi-centennial; to

They are essential readings to anyone serious about gaining a true understanding of the prodigious urbanization in contemporary China.

marked as it has ever been. In a landmark analysis of the current state of Britain's regional development, Philip McCann utilises current statistics, examines historical trends and makes pertinent international comparisons to assess the state of the nation. The UK Regional–National Economic Problem brings attention to the highly centralised, top down governance structure that the UK deploys, and demonstrates that it is less than ideally placed to rectify these inequalities. The 'North-South' divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity, incomes, employment status and wealth. Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland, in contrast the

Midlands, the North of England, Northern Ireland and Wales lag behind by most measures of prosperity. This inequality is greatly limiting national economic performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored. The UK's economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends, although this definitive study suggests that some areas of improvement are possible if they are well implemented. This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government.

This book discusses a number of ways in which out-of-school science education can uniquely engage learners with 'wicked' global problems such as biodiversity loss and climate change. The idea for the volume originated in discussions among members of the ESERA special interest group on "Science Education in Out-of-School contexts". It emerged from these discussions that out-of-school institutions and experiences offer opportunities for critical engagement in wicked problems that go far beyond what is

possible solely in the science classroom. The book opens with a principled discussion of the nature of wicked problems and what addressing them involves. This introduction clarifies key terms and ideas to create a coherent backdrop for the rest of the book. Subsequent chapters discuss the challenges of designing educational experiences to address wicked problems, as well as the teaching and learning that takes place. The authors offer perspectives across a range of out-of-school environments such as science centres, natural history museums, botanical gardens, geological sites, and local communities. The book concludes with a chapter that synthesises the findings from the various contributions and points to the messages for educators. Finally, the editors outline an exciting

This timely collection of essays examines how jihadist narratives have changed globally, adapting to these turbulent circumstances.
