The Genius of Japanese Carpentry tells the story of the 1200-year-old Yakushiji monastery in and the dedicated modern-day craftsmen who are working to restore what has been lost to depredations of time, fire and warfare. Although the full monastery reconstruction will not be completed until 2030, one of the main temples, the Picture Hall, has been completely restored employing the same woodworking technology used to create the original building. This new edition of an architectural classic is by Azby Brown—one of the world's leading experts on Japanese architecture. It contains a new preface and many new text materials and photographs—most now available in color for the first time. Azby Brown chronicles the painstaking restoration of the temple through extensive interviews with the carpenters and woodworkers along with original drawings based on the plans of master carpenter Tsunekazu Nishioka. An inspiring testament to the dedication of these craftsmen and their philosophy of carpentry work as a form of personal fulfillment, The Genius of Japanese Carpentry offers detailed documentation of this singular project and a moving reminder of the unique cultural continuity found in Japan.

Widely used throughout the construction trade, the 9th Edition of PRACTICAL PROBLEMS IN MATHEMATICS FOR CARPENTERS delivers the math skills every carpenter needs to be successful. Divided into short units, this combination book/workbook first explains essential principles in straightforward, concise language, and then reinforces each with samples of problems common in the building and construction trade. Step-by-step solutions to the problems, as well as detailed illustrations, help readers understand the math concepts, visualize their application in everyday carpentry work, and perform the functions themselves. For more than thirty years, Construction Project Management by Clough and Sears has been considered the preeminent guide to all aspects of the construction project management process, including the Critical Path Method (CPM) of project scheduling. Now, for the first time, the book is part of a learning package that comes with access to an online course built around the book provided by online training leader Red Vector. The book, and by extension the class, combines a solid foundation in the principles and fundamentals of CPM with particular emphasis on project planning, demonstrated through an example project. The Sixth Edition features new pedagogical elements such as end-of-chapter problems and questions, and a full suite of instructor's resources. New information on the Earned Value Analysis (EVA) system and introductory coverage of Building Information Modeling (BIM) and Lean Construction in the context of project scheduling help make this text thorough and up-to-date.
