Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre--kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society. Leave instruction to the experts! Uncommon Core puts us on high-alert about some outright dangerous misunderstandings looming around so-called "standards-aligned" instruction, then shows us how to steer past them—all in service of meeting the real intent of the Common Core. It counters with teaching suggestions that are true to the research and true to our students, including how: Reader-based approaches can complement text-based ones Prereading activities can help students meet the strategic and conceptual demands of texts Strategy instruction can result in a careful and critical analysis of text while providing transferable understandings Inquiry units around essential questions can generate meaningful conversation and higher-order thinking

Would low-achieving students fall behind and become frustrated? Would their higher-achieving peers suffer from a "watered-down" curriculum? Or is tracking itself the problem? A growing body of research shows that tracking doesn't increase learning for the minority and low-income students who are overrepresented in low-track classrooms. This de facto segregation has led many civil rights advocates to argue that tracking is turning back the clock on equal education. As a principal at a New York high school, Carol Corbett Burris believed that the curriculum for the best students was the best curriculum for all. She helped lead a bold plan to eliminate tracking from her school, and the results couldn't have been further from the doom-and-gloom scenarios of tracking proponents. Instead, there was a dramatic improvement in the achievement of all students, across racial and socioeconomic divisions, and a near elimination of the achievement gap. Today, due to those efforts, International Baccalaureate English is the twelfth-grade curriculum for South Side students, and all students take the same challenging courses, together, to prepare them for college. In *On the Same Track*, Burris draws on her own experience, on the experiences of other schools, and on the latest research to make an impassioned case for detracking. Not only does the practice of tracking fail to benefit lower-tracked students, as Burris shows, but it also results in the resegregation of classrooms. Furthermore, she argues that many of today's popular reforms emanate from the same "sort and select" mentality that reinforces social stratification based on race and class. *On the Same Track* is a rousing, controversial, and yet optimistic account of how we need to change our assumptions and policies if we are to live up to the promise of democratic public education. Only by holding all students to the same high standards can we ensure that all have the same opportunity to live up to their full potential.*

This book contrasts authentic approaches to education with classroom practices based primarily on standards external to the individuals who are supposed to learn. While other books tend to promote either a desperate scramble for meeting standards or determined resistance to neoliberal reforms, this book fills that gap in ways that will inspire practitioners, prospective teachers, and teacher educators. Mandates pay only lip service to constructivist and social constructivist principles while thwarting the value of both students and teachers actively creating understandings. Authors in this book assert the central importance of a range of constructivist approaches to teaching, learning, and thinking, inviting careful reflection on the goals and values of education.
