vernacular historiography, rarely noted in official histories, reveals the tensions between professed oblivion in public and more subtle rituals of remembrance that facilitated muted traditions of forgetful remembrance, which were masked by a local culture of reticence and silencing.

The public is more interested in

agricultural and food issues than ever before, as is evident in the many agricultural controversies debated in the media. Why is it that some people embrace new agricultural technologies while others steadfastly defend traditional

controversies, the authors

encourage readers to develop first

an appreciation for why two equally

notions about food. Sometimes the disputes are scientific in nature, and sometimes they arise from conflicting ethical views. This book confronts the most controversial issues in agriculture by first explaining the principles of both

sides of the debate, and then guiding readers through the scientific literature so that they may form their own educated opinions.

Is food safe if the farm used pesticides, or are organic foods truly better for your health? Are

chemical fertilizers sustainable, or are we producing cheap food today at the expense of future generations? What foods should we eat to have a smaller carbon footprint? Is genetically-modified food the key to global food security,

and does it give corporations too much market power? Is the prevalence of corn throughout the food system the result of farm subsidies? Does buying local food stimulate the local economy? Why are so many farm animals raised

issues addressed in Agricultural and Food Controversies: What
