Neil Campbell and Jane Reece's *BIOLOGY* remains unsurpassed as the most successful majors biology textbook in the world. This text has invited more than 4 million students into the study of this dynamic and essential discipline. The authors have restructured each chapter around a conceptual framework of five or six big ideas. An Overview draws students in and sets the stage for the rest of the chapter, each numbered Concept Head announces the beginning of a new concept, and Concept Check questions at the end of each chapter encourage students to assess their mastery of a given concept. New Inquiry Figures focus students on the experimental process, and new Research Method Figures illustrate important techniques in biology. Each chapter ends with a Scientific Inquiry Question that asks students to apply scientific investigation skills to the content of the chapter.

The New Cambridge Shakespeare appeals to students worldwide for its up-to-date scholarship and emphasis on performance. The series features line-by-line commentaries and textual notes on the plays and poems. Introductions are regularly refreshed with accounts of new critical, stage and screen interpretations. This second edition of The Merchant of Venice retains the text and Introduction prepared by M. M. Mahood and features a new introductory section by Charles Edelman. Where Mahood focuses in her Introduction on the expectations of the play's first audience and on our modern experience of seeing and hearing the drama performed, Edelman explores the play's sexual politics. He also foregrounds recent scholarship on the position of Jews in Shakespeare's time and surveys the international scope and diversity of theatrical interpretations of the text in the 1980s and 1990s. He pays particular attention to the ways in which

directors and actors tackle the troubling figure of Shylock. *On the Origin of Species* (or, more completely, *On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life*), published on 24 November 1859, is a work of scientific literature by Charles Darwin which is considered to be the foundation of evolutionary biology. Darwin's book introduced the scientific theory that populations evolve over the course of generations through a process of natural selection. It presented a body of evidence that the diversity of life arose by common descent through a branching pattern of evolution. Darwin included evidence that he had gathered on the *Beagle* expedition in the 1830s and his subsequent findings from research, correspondence, and experimentation.

Biofilms are highly resistant to antibiotics and antimicrobials, a fact that motivates scientists to focus on more applied aspects of the discipline with new ideas and approaches generated from the basic knowledge. The updated aspects of biofilm research reported in this volume will encourage researchers to integrate these new concepts to develop innovative approaches to the behaviour and functions of biofilms. Essential reading for anyone interested in biofilms.

Each of the eight units reflect the progress in scientific understanding of biological processes at many levels, from molecules to ecosystems.

“A fascinating and frightening book” (Los Angeles Times)—the bestselling true story about a house possessed by evil spirits, haunted by psychic phenomena almost too terrible to describe. In December 1975, the Lutz family moved into their new home on suburban Long Island. George and Kathleen Lutz knew that, one year earlier, Ronald DeFeo had murdered his parents, brothers, and sisters in the house, but the property—complete with boathouse and swimming pool—and the price had been too good to pass up. Twenty-eight days later, the entire Lutz family fled in terror. This is the spellbinding, shocking true story that gripped the nation about an American dream that turned into a nightmare beyond imagining—“this book will scare the hell out of you” (Kansas City Star).
