Hi there, I'm glad you have chosen to study with The Harvard Review to AP Biology I. As a student I went through the same boring classes you have; biology, chemistry, physics, organic chemistry, etc., and I found myself bored and uninterested in the teachers concepts; so I thought of a great idea. Why not simplify these hard subjects in 1/4 of the material, through easy to understand examples and typical college vocabulary. What I have done here is pretty much taken a biology textbook along with my notes and many other sources and thrown out all the unnecessary long explanations, vocabulary, etc., and simplified it into one easy to understand book complete with examples and solutions. This book can be used as a study guide for biology class (high school, AP, college). I look forward to any feedback you may have as well. It may seem that some parts of this book are too simple, or do not have enough information written. Do not worry; I have revised this book to make it like this, as simple as possible to the average person, in order to help them understand physics. This is the way biology should be. I have searched books, notes, online, etc. and tried to make every explanation as simple as possible, yet you'll learn just as much as you would with a regular textbook in less time

The answer explanations will help you to learn from your mistakes and overcome them. Understanding the latest test-taking strategies is essential to preparing you for what you will expect on the exam.
