We recommend only the best: a domain of backlit screens, instant information, and vibrant realities that can outcompete dreary reality. Our brave new technologies offer incredible opportunities for work and play. But at what price? How renowned neuroscientist Susan Greenfield—known in the United Kingdom for challenging entrenched conventional views—brings together a range of scientific studies, news events, and cultural criticism to create an incisive snapshot of “the global now.” “Disrupting the assumption that our technologies are harmless tools, Greenfield explores whether incessant exposure to social media sites, search engines, and videogames is capable of rewiring our brains, and whether the minds of people born before and after the advent of the Internet differ. Stressing the impact on Digital Natives—those who’ve never known a world without the Internet—Greenfield exposes how neuronal networking may be affected by unprecedented bombardments of audiovisual stimuli, how gaming can shape a chemical landscape in the brain similar to that in gambling addicts, how surfing the Net risks placing a premium on information rather than on deep knowledge and understanding, and how excessive use of social networking sites limits the maturation of empathy and identity. But Mind Change also delves into the potential benefits of our digital lifestyle. Sifting through the cocktail of not only threat but opportunity these technologies afford, Greenfield explores how gaming enhances vision and motor control, how touch tablets aid students with developmental disabilities, and how political “clicktivism” fomentes positive change. In a world where adults spend ten hours a day online, and where tablets are the common means by which children learn and play, Mind Change reveals as never before the complex physiological, social, and cultural ramifications of living in the digital age. A book that will be to the Internet what An Inconvenient Truth was to global warming, Mind Change is provocative, alarming, and a call to action to ensure a world in which technology fosters—not frustrates—deep thinking, creativity, and true fulfillment. Praise for Mind Change “Greenfield’s application of the mismatch between human and machine to the brain introduces an important variation on this pervasive view of technology. . . . She has a rare talent for explaining science in accessible prose.”—The Washington Post “Greenfield’s focus is on bringing to light the implications of Internet-induced “mind change”—as comparably multifaceted as the issue of climate change, she argues, and just as important.”—Chicago Tribune “Mind Change is exceedingly well organized and hits the right balance between academic and provocative.”—Booklist “[A] challenging, stimulating perspective from an informed neuroscientist on a complex, fast-moving, hugely consequential field.”—Kirkus Reviews “[Greenfield] is not just an engaging communicator but a thoughtful, responsible scientist, and the arguments she makes are well-supported and persuasive.”—Mail on Sunday “Greenfield’s admirable goal to prove an empirical basis for discussion is . . . an important one.”—Financial Times “An important presentation of an uncomfortable minority position.”—Jaron Lanier, Nature

The Very Hungry Caterpillar

For nearly two decades Western governments and a growing activist community have been frustrated in their attempts to bring about a freer and more democratic Burma—through sanctions and tourist boycotts—only to see an apparent slide toward even harsher dictatorship. But what do we really know about Burma and its history? And what can Burma’s past tell us about the present and even its future? In The River of Lost Footsteps, Thant Myint-U tells the story of modern Burma, in part through a telling of his own family’s history, in an interwoven narrative that is by turns lyrical, dramatic, and appalling. His maternal grandfather, U Thant, rose from being the schoolmaster of a small town in the Irrawaddy Delta to become the UN secretary-general in the 1960s. And on his father’s side, the author is descended from a long line of courtiers who served at Burma’s Court of Ava for nearly two centuries. Through their stories and others, he portrays Burma’s rise and decline in the modern world, from the time of Portuguese pirates and renegade Mughal princes through the decades of British colonialism, the devastation of World War II, and a sixty-year civil war that continues today and is the longest-running war anywhere in the world. The River of Lost Footsteps is a work both personal and global, a distinctive contribution that makes Burma accessible and enlightening.

A new way of thinking about data science and data ethics that is informed by the ideas of intersectional feminism. Today, data science is a form of power. It has been used to expose injustice, improve health outcomes, and topple governments. But it has also been used to discriminate, police, and surveil. This potential for good, on the one hand, and harm, on the other, makes it essential to ask: Data science for whom? Data science with whose interests in mind? The narratives around big data and science are overwhelmingly white, male, and techno-heroic. In Data Feminism, Catherine D'Ignazio and Lauren Klein present a new way of thinking about data science and data ethics—one that is informed by intersectional feminist thought. Illustrating data feminism in action, D'Ignazio and Klein show how challenges to the male/white binary can help challenge other hierarchical (and empirically wrong) classification systems. They explain how, for example, an understanding of emotion can expand our ideas about effective data visualization, and how the concept of invisible labor can expose the significant human efforts required by our automated systems. And they show why the data never, ever “speak for themselves.” Data Feminism offers strategies for data scientists seeking to learn how feminism can help them work toward justice, and for feminists who want to focus their efforts on the growing field of data science. But Data Feminism is about much more than gender. It is about power, about who has it and who doesn't, and about how those differentials of power can be challenged and changed.

This book is a comprehensive guide to action learning which maintains an accessible, practical focus throughout. It is packed with useful resources, including case studies and ideas for workshop sessions. Key topics covered include:
* action learning in professional and educational settings
* setting up, facilitating and evaluating an action learning programme
* the roles and skills required to practice successfully
* use of action learning in relation to the individual, the group and the organization
* the role of reflection; and action learning theory. Newcomers to the area of action learning will find this an essential introduction which can be put to use straight away, while more experienced practitioners seeking a deeper understanding will value the thorough analysis of action learning theory.

An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. “Written by three experts in the field, Deep Learning is the only comprehensive book on the subject.” –Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. Until now, there has only been a shallow understanding of how the leadership actions of project managers interact with ethics and social responsibility. Empirical research into this subject has been sparse. Responsible Leadership, by Nicholas Clarke, Alessia DiAmato, Malcolm Higgs, and Ramesh Vahidi is the first study to investigate how the relationships among managers, team members, and other stakeholders can bring about personal and ethical conflicts that impact decision making.In this groundbreaking book, the authors explore how those who serve as leaders on projects can exercise their roles in ways that respond to the ever-increasing need for ethical decision making. They examine the factors that enable and constrain responsible leadership, looking at the issues faced by project managers as they interact with team members and other stakeholders. Responsible Leadership also provides new insights into how project managers view the moral implications of conflicts that occur as they conduct their work and is a valuable addition to the project management toolkit.

* I too am not a bit tamed! I too an untranslatable / I sound my barbaric yawp over the roofs of the world."Walt Whitman, "Song of Myself."
Leaves of Grass The American Yawp is a free, online, collaboratively built American history textbook. Over 300 historians joined together to create the book they wanted for their own students/an accessible, synthetic narrative that reflects the best of recent historical scholarship and provides a jumping-off point for discussions in the U.S. history classroom and beyond. Long before Whitman and long after, Americans have sung something collectively amid the deafening roar of their many individual voices. The Yawp highlights the dynamism and conflict inherent in the history of the United States, while also looking for the common threads that help us make sense of the past. Without losing sight of politics and power, The American Yawp incorporates transnational perspectives, integrates diverse voices, recovers narratives of resistance, and explores the complex process of cultural creation. It looks for America in crowded slave cabins, bustling markets, congested tenements, and marbled halls. It navigates between maternity wards, prisons, streets, bars, and boardrooms. The fully peer-reviewed edition of The American Yawp will be available in two print volumes designed for the U.S. history survey. Volume 1 begins with the indigenous people who called the Americas home before chronicling the collision of Native Americans, Europeans, and Africans.The American Yawp traces the development of colonial society in the context of the larger Atlantic World and investigates the origins and ruptures of slavery, the American Revolution, and the new nation's development and rebirth through the Civil War and Reconstruction. Rather than asserting a fixed narrative of American progress, The American Yawp gives students a starting point for asking their own questions about how the past informs the problems and opportunities that we confront today.

In the United States, some populations suffer from far greater disparities in health than others. These disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual’s health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable; such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Gathering leading thinkers in social and clinical psychology, public health, medicine, and sociology, Interpersonal Relationships and Health considers theoretical and empirical issues relevant to understanding the social and clinical psychological mechanisms linking close relationship processes with mental and physical health outcomes. The volume arises out of a recent explosion of interest, across multiple academic and research fields, in the ways that interpersonal relationships affect health and well-being. This volume pulls together a range of scholars who focus on different aspects of relationships and health in order to encourage both collaboration and cross-disciplinary initiatives. This is the first edited volume to pull together noted experts across myriad disciplines whose research is at the intersection of human relationships and health. Topics addressed include key biological processes that influence and, in turn, are influenced by close relationships. Interpersonal Relationships and Health presents research that demonstrates the connections between interpersonal relationships, mental and physical health outcomes, and biophysical markers that figure prominently in the fields of psychoneuroimmunology, endocrinology, and cardiology. In addition, it highlights recent work on marital, family, and social relationships and their interplay with health and well-being. Chapters also address sexual health among young and older adults, as well as clinical intervention efforts that focus on the role of relational factors in influencing health. Each chapter highlights extant theoretical and empirical findings and suggests future avenues for research in this burgeoning area.

This book explores the complexity of communication and understanding as a possible asset in formal education rather than a problem that needs to be “fixed”. The authors examine the question and experience as pedagogical tools, challenging readers to play the critic and ask hard questions, beginning with: Why do the ideas discussed within the book matter? The digital information age with expanding ways of thinking, being, communicating, and learning complicates public education. So, what happens as diverse narratives collide in schools? To answer this question, the authors of this book delve into conflicting assumptions within the framework of complexity sciences and education in an attempt to explore space beyond positivist/anti-positivist debates. This involves examining the role of cultural and aesthetic narratives and cautionary tales as means of acknowledging possibilities in human experiences in education. These possibilities can facilitate praxis, as theory, research, and teaching become reflective practices, and as thinking about education broadens to include diverse methods of understanding and presenting complex phenomena. This easy-to-use pocket guide, compiled from the sixth edition of the "Publication Manual of the American Psychological Association," provides complete guidance on the rules of style that are critical for clear communication.

A fascinating slice of social history - Jennifer Worth's tales of being a midwife in 1950s London, now a major BBC TV series. Jennifer Worth came from a sheltered background when she became a midwife in the Docklands in the 1950s. The conditions in which many women gave birth just half a century ago were horrifying, not only because of their grimly impoverished surroundings, but also because of what they were expected to endure. But while Jennifer witnessed brutality and tragedy, she also met with amazing kindness and understanding, tempered by a great deal of Cockney humour. She also earned the confidences of some whose lives were truly stranger, more poignant and more terrifying than could ever be recounted in fiction. Attached to an order of nuns who had been working in the slums since the 1870s, Jennifer tells the story not only of the women she treated, but also of the community of nuns (including one who was accused of stealing jewels from Hatton Garden) and the camaraderie of the midwives with whom she trained. Funny, disturbing and incredibly moving, Jennifer's stories bring to life the colourful world of the East End in the 1950s.

An accessible synthesis of ethical issues raised by artificial intelligence that moves beyond hype and nightmare scenarios to address concrete questions. Artificial intelligence powers Google’s search engine, enables Facebook to target advertising, and allows Alexa and Siri to do their jobs. AI is also behind self-driving cars, predictive policing, and autonomous weapons that can kill without human intervention. These and other AI applications raise complex ethical issues that are the subject of ongoing debate. This volume in the MIT Press Essential Knowledge series offers an accessible synthesis of these issues. Written by a philosopher of technology, AI Ethics goes beyond the usual hype and nightmare scenarios to address concrete questions. Mark Coeckelbergh describes influential AI narratives, ranging from Frankenstein’s monster to transhumanism and the technological singularity. He surveys relevant philosophical discussions: questions about the fundamental differences between humans and machines and debates over the moral status of AI. He explains the technology of AI, describing different approaches and focusing on machine learning and data science. He offers an overview of important ethical issues, including privacy concerns, responsibility and the delegation of decision making, transparency, and bias as it arises at all stages of data science processes. He also considers the future of work in an AI economy. Finally, he analyzes a range of policy proposals and discusses challenges for policymakers. He argues for ethical practices that embed values in design, translate democratic values into practices and include a vision of the good life and the good society.

The brilliant, controversial, bestselling critique of American culture that “fits with the approximate force and effect of electroshock therapy” (The New York Times)—now featuring a new afterword by Andrew Ferguson in a twenty-fifth anniversary edition. In 1987, eminent political philosopher Allan Bloom published The Closing of the American Mind, an appraisal of contemporary America that “fits with the approximate force and effect of electroshock therapy” (The New York Times) and has not only been vindicated, but has also become more urgent today. In clear, spirited prose, Bloom argues that the social and political crises of contemporary America are part of a larger intellectual crisis: the result of a dangerous narrowing of curiosity and exploration by the university elites. Now, in this twenty-fifth anniversary edition, acclaimed author and journalist Andrew Ferguson contributes a new essay that describes why Bloom’s argument caused such a furor at publication and why our culture so deeply resists its truths today.
