children now live in families with incomes below the povertyline, and their prospects are not bright. Low income is statistically linked with a variety of poor outcomes for children, from low birth weight and poor nutrition in infancy to increased chances of academic failure, emotional distress, and unwed childbirth in adolescence. To address these problems it is not enough to know that money makes a

Consequences of Growing Up Poor is an extensive and illuminating examination of the paths through which economic deprivation damages children at all stages of their development. In Consequences of Growing Up Poor, developmental psychologists, economists, and sociologists revisit a large body of studies to answer specific questions about how low income puts children at

risk intellectually, emotionally, and physically. Many of their investigations demonstrate that although income clearly creates disadvantages, it does so selectively and in a wide variety of ways. Low-income preschoolers exhibit poorer cognitive and verbal skills because they are generally exposed to fewer toys, books, and other stimulating experiences in the home. Poor parents also tend to

rely on home-based child care, where the quality and amount of attention children receive is inferior to that of professional facilities. In later years, conflict between economically stressed parents increases anxiety and weakens self-esteem in their teenaged children. Although they share economic hardships, the home lives of poor children are not homogenous. Consequences of Growing Up Poor investigates whether

such family conditions as the marital status, education, and involvement of parents mitigate the ill effects of poverty. Consequences of Growing Up Poor also looks at the importance of timing: Does being poor have a different impact on preschoolers, children, and adolescents? When are children most vulnerable to poverty? Some contributors find that poverty in the prenatal or early childhood years appears to be

particularly detrimental to cognitive development and physical health.

Others offer evidence that lower income has a stronger negative effect during adolescence than in childhood or adulthood. Based on their findings, the editors and contributors to *Consequences of Growing Up Poor* recommend more sharply focused child welfare policies targeted to specific eras and conditions of poor children's lives. They

also weigh the relative need for income supplements, child care subsidies, and home interventions.

Consequences of Growing Up Poor describes the extent and causes of hardships for poor children, defines the interaction between income and family, and offers solutions to improve young lives.

User Interfaces for All is the first book dedicated to the issues of Universal

Design and Universal Access in the field of Human-Computer Interaction (HCI). Universal Design (or Design for All) is an inclusive and proactive approach seeking to accommodate diversity in the users and usage contexts of interactive products, applications, and services, starting from the design phase of the development life cycle. The ongoing paradigm shift toward a knowledge-intensive information society is already bringing about radical changes in the way people work and interact with each other and with information. The requirement for Universal Design stems from the growing impact of the fusion of the emerging technologies, and from the different dimensions of diversity, which are intrinsic to the information society. This book unfolds the various aspects of this ongoing

evolution from a variety of viewpoints. It's a collection of 30 chapters written by leading international authorities, affiliated with academic, research, and industrial organizations, and non-market institutions. The book provides a comprehensive overview of the state of the art in the field, and includes contributions from a variety of theoretical and applied disciplines and research themes. This book can also be used for teaching purposes in HCI courses at the undergraduate as well as graduate level. Students will be introduced to the human-, organizational-, and technology-oriented dimensions that call for a departure from traditional approaches to user interface development. Students will also get an overview of novel methods, techniques, tools, and frameworks for the design,

Communication in Autism adopts a multidisciplinary approach to explore one of the most common developmental disorders associated with communication impairment. Perhaps the most fascinating thing about communication in autism is that variation is as extreme as it could possibly be. While some individuals with autism have age-appropriate language, a number have exceptional language skills; others have little or no spoken language. In between these extremes are individuals who experience significant linguistic impairments. These impairments can affect peer relations and literacy skills. The chapters in this volume provide

The result is a volume that showcases the wide range of methodologies being used in this field of research. It is invaluable for scientists, service providers, parents, individuals with autism, and students learning about communication and autism (e.g., in psychology, speech pathology, and education).

Careers in astronomy for women (as in other sciences) were a rarity in Britain and Ireland until well into the twentieth century. The book investigates the place of women in astronomy before that era, recounted in the form of biographies of about 25 women born between 1650 and 1900 who in

varying capacities contributed to its progress during the eighteenth, nineteenth and early twentieth centuries. There are some famous names among them whose biographies have been written before now, there are others who have received less than their due recognition while many more occupied inconspicuous and sometimes thankless places as assistants to male family members. All deserve to be remembered as interesting individuals in an earlier opportunity-poor age. Placed in roughly chronological order, their lives constitute a sample thread in the story of female entry into the male world of science. The book is aimed at astronomers, amateur astronomers, historians of science, and promoters of women in science, but being written in non-technical

language it is intended to be of interest also to educated readers generally. Most students struggle with learning how to find references, use them effectively, and cite them appropriately in a required format. One of the most common formats is that of APA. The authors all teach at the same university, where their current off-the-shelf reference book, while helpful, is filled with a lot of extra information that they do not use and contains missing or incorrect information. The cost of this book also continues to rise. In a search for something else to meet their needs, they discovered that there are no concise guides that deal with APA only that are cost effective or user-friendly for students who are not familiar with using references and formatting an essay in the APA format. In order to offer student writers a

source of information that is concise and cost-effective, the authors have written this handbook to provide students with important information in clear, concise, user-friendly language, as well as to offer practical examples that will help them grasp the concept of secondary research writing. Much of the published materials present the nitpicky details of APA in very technical terms that are not easy to understand. This handbook presents the same information in simplified terms with images and step-by-step instructions in ways that will make sense to both undergraduate and graduate student writers. Additionally, student writers often struggle with understanding the concept of plagiarism, as well as how to find sources, evaluate the appropriateness of sources, and use sources in

effective ways (e.g., how to integrate quotes, when to paraphrase, among others). This book provides this information in a concise and easy-to-understand format.

By piecing the lives of selected individuals into a grand mosaic, Pulitzer Prize-winning historian Daniel J. Boorstin explores the development of artistic innovation over 3,000 years. A hugely ambitious chronicle of the arts that Boorstin delivers with the scope that made his *Discoverers* a national bestseller. Even as he tells the stories of such individual creators as Homer, Joyce, Giotto, Picasso, Handel, Wagner, and Virginia Woolf, Boorstin assembles them into a grand mosaic of aesthetic and intellectual invention. In the process he tells us not only how great art (and great architecture and philosophy) is

The authors have taken this opportunity and have done an outstanding job not only of reviewing and structuring the extensive body of thought in many major areas of marketing management but also of providing valuable suggestions for further research. They have brought together major contributions from the field of marketing and from other related disciplines. I strongly encourage marketing scholars to

How to Get People to Do Stuff

We all want people to do stuff.

Whether you want your customers to buy from you, vendors to give you a good deal, your employees to take more initiative, or your spouse to make dinner—a large amount of everyday is about getting the people around you to do stuff. Instead of using your usual tactics that sometimes work and sometimes don't, what if you

could harness the power of psychology and brain science to motivate people to do the stuff you want them to do - even getting people to want to do the stuff you want them to do. In this book you ' ll learn the 7 drives that motivate people: The Desire For Mastery, The Need To Belong, The Power of Stories, Carrots and Sticks, Instincts, Habits, and Tricks Of The Mind. For each of the 7 drives behavioral psychologist Dr. Susan Weinschenk describes the research behind each drive, and then offers specific strategies to use. Here ' s just a few things you will learn: The more choices people have the more regret they feel about the choice they pick. If you want people to feel less regret

then offer them fewer choices. If you are going to use a reward, give the reward continuously at first, and then switch to giving a reward only sometimes. If you want people to act independently, then make a reference to money, BUT if you want people to work with others or help others, then make sure you DON ' T refer to money. If you want people to remember something, make sure it is at the beginning or end of your book, presentation, or meeting. Things in the middle are more easily forgotten. If you are using feedback to increase the desire for mastery keep the feedback objective, and don ' t include praise. This book consists of a collection of selected papers presented at the TARC International

His battalion was among the first wave of troops that crossed into Iraq, and his first combat experience was the battle of Nasiriyah, followed by patrols throughout the country, house to house searches, and operations in the dangerous Baghdad slums. But after two tours of duty, certain images would not leave his memory—a fragmented mental movie

of shooting a little girl; of scavenging parts from a destroyed, blood-spattered tank; of obliterating several Iraqi men hidden behind an ancient wall; and of mistakenly stepping on a "soft spot," the remains of a Marine killed in combat. After his return home, Van Winkle sought help at a Veterans Administration facility, and so began a maddening journey through an indifferent system that promises to care for veterans, but in

From riveting scenes of combat violence, to the gallows humor of soldiers fighting a war that seems to make no sense, to moments of tenderness in a civilian life ravaged by flashbacks, rage, and doubt, Soft Spots reveals the mind of a soldier like no other recent memoir of the war that has consumed America.
