This authoritative reference examines the causes of--and offers workable solutions to--the widespread problem of musculoskeletal injuries among armed forces personnel. Specific chapters on combat, non-combat, training, and fitness injuries shed necessary light on the nature and scope of the epidemic, including impact on active service members and the resulting quality of life issues in veterans. An overview of these injuries by anatomic region highlights treatment, disability, and prevention issues in military settings. The book also translates the standard public health model for preventing injuries into military context, giving professionals guidelines for developing strategies tailored to the unique strengths and risks of this population. Featured in the coverage:

- The burden of musculoskeletal injuries in the military.***
- Traumatic combat injuries.***
- Deployment and non-battle injuries.***
- Epidemiology of musculoskeletal injuries by anatomic region.***
- Application of the public health model for injury prevention.***
- Barriers to injury prevention in the military.***

Its depth of detail makes Musculoskeletal Injuries in the Military critical reading for orthopedic surgeons, physical therapists, athletic trainers, military leaders, military and VA healthcare staff including physicians and policymakers, public health and injury prevention professionals, occupational

health and safety professionals, musculoskeletal injury and disease researchers, and veterans' health advocacy groups.

ADP 6-22 describes enduring concepts of leadership through the core competencies and attributes required of leaders of all cohorts and organizations, regardless of mission or setting. These principles reflect decades of experience and validated scientific knowledge. An ideal leader serves as a role model through strong intellect, physical presence, professional competence, and moral character. An Army leader is able to act decisively, within superior leaders' intent and purpose, and in the organization's best interests. Army leaders recognize that organizations build mutual trust and confidence, accomplish missions. Every member of the Army, military or civilian, is part of a team and functions in the role of leader and subordinate. Being a good subordinate is part of being an effective leader. Leaders do not just lead subordinates—they also lead other leaders. Leaders are not limited to just those designated by position, rank, or authority.

A comprehensive guide to the process of applying and earning your commission. Are you a former soldier, sailor, or

airman who left the service without making the most of your potential? Are you a leader in the civilian sector who knows you have more to give back to the country you love? If so, you should consider entering the Army, Army Reserves, or Army National Guard, earn your commission as a Second Lieutenant, and begin or restart an exciting career as a leader in the world's best military. The Ultimate Officer Candidate School Guidebook explains everything you need to know to achieve these goals. Earning the right to become a US Army officer is an honor and a privilege, and the deck is stacked against those over twenty-five because of the rigorous, time-consuming training. However, you can attend OCS to earn a commission as a Second Lieutenant if you: are between eighteen and forty have an undergraduate degree from an accredited college have or can attain a minimum GT score of 110 can pass an Army Physical Fitness Test Getting accepted to OCS is not automatic, and your choice of when and where to enter is limited. Federal OCS, held at Fort Benning, Georgia, and the many state traditional and fast-track programs offer potential officer candidates a choice about how and when to earn their commission. In this book, an OCS graduate and former TAC Officer offers nineteen chapters of information to guide potential candidates down the path of earning a commission in the Army. It covers everything from the application process, to stressors from TAC officers while attending OCS, to deciding what branch to choose upon earning your commission. It even includes pages with pre-made terrain model kits to assist you while attending OCS, for those who are serious about leadership and finishing strong. Are you up to the challenge?

This resource provides information for caregivers on how to perform their jobs without becoming patients themselves. This text will introduce the caregiver to hazards unique to the healthcare environment and will provide practical measures to make the work safer. Caregivers who are knowledgeable about providing a safe working environment for themselves will likely be better equipped to provide safe care environments for their patients. Practical prevention tips for most of the common healthcare hazards, including hazardous substances, stress, workplace violence and shiftwork, are provided. Caregivers will be provided with easy-to-understand information on how to use transmission-based precautions to prevent becoming ill themselves, and will have an opportunity to learn why the traditional approach of using 'body mechanics' training is ineffective in preventing strain and sprain injuries, and will be introduced to new, safe, and effective ways to move patients more easily and safely. Easy and safe for the caregiver is also easy and safe for the patient! The text will also include career-related information such as how to select a safe employer, how to improve safety in the current work-setting, and worker rights under the Occupational Safety and Health Administration.

Obesity and overweight pose significant challenges to the armed forces in the United States, affecting service members (including active duty, guard, and reserve components), veterans, retirees, and their families and communities. The consequences of obesity and overweight in the armed forces influence various aspects of its operations that are critical to national security. On May 7, 2018, the National Academies of Sciences, Engineering, and Medicine, held a workshop titled "Understanding and Overcoming the Challenge of Obesity and Overweight in the Armed Forces." Speakers examined how obesity and overweight are measured in the armed forces and how they affect recruitment, retention, resilience, and readiness; discussed service-specific issues related to these problems and highlighted innovative strategies to address them through improved nutrition, physical activity, and stress management; and offered perspectives from outside of the armed forces on approaches to prevent and treat obesity. They also discussed the challenges and opportunities related to overcoming the concerns posed by obesity and overweight in the armed forces, military families, and their communities, including potential cross-sector opportunities. This publication summarizes the presentations and discussions from the workshop.

Leader's Guide "climb to Glory"

Department of Defense Appropriations for 1989

This is another in a series of Safety Guides for installation commanders, leaders, and workplace supervisors to help them protect their work forces against accidental losses. The focus here is one of the most common and most costly workplace injuries -- back injury. Applying the methods outlined in this booklet will help leaders mount effective back-

injury-prevention programs. It contains ideas developed throughout the Army during the early phases of our back-emphasis effort. New approaches include added emphasis on ergonomics and contributions from a broader spectrum of Army health care professionals. Learning from earlier loss control successes, we know the Army's back-injury-prevention campaign must be a shared task. It can succeed only through coordinated staff action. Like all important leadership responsibilities, elimination of back-related losses is a "Commander's Program. But commanders lead, they do not administer. Keeping a lid on back-injury costs demands a lot of attention to detail from first-line supervisors and help from the installation's staff specialists. Chronic dollar losses are so great that their reduction will easily return the cost of control. The ideas and management tools in this pamphlet will help installation officials develop their own unique programs. While effective prevention of back injuries is required by Army and Federal regulations, no single approach is mandated. But most workplaces have room for improvement. Their leaders can profit from the prevention and care strategies outlined in this guide.
