Flanges

Flanges are used to connect pipes, vessels, and other equipment. They are available in a variety of materials, including carbon steel, alloy steel, and stainless steel. Flanges are classified into several types, including **JIS** (Japanese Industrial Standards) and ASME (American Society of Mechanical Engineers). The most common flange types are Class 150, Class 300, and Class 600. Flanges are used in a wide range of applications, including power generation, petrochemical processing, and water treatment.

The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government.
