Stone Age Economics

The Witch's Garden describes over 50 of the world's most powerful, harmful, legendary and storied plants -- from the screaming mandrake to calming St John's Wort, to predicting the weather with seaweed, the creation of salves for broken hearts, sore heads, protection from evil spirits and to even induce immortality. Wise women, apothecaries, witches, herbalists: whatever you like to call them, those who cultivate plants for their apparent mystical properties have existed for thousands of years. The Witch's Garden tells the story of our folkloric fascination with these magical specimens, documenting the beliefs and rituals surrounding the natural world. Illustrated with pages from herbals held within the archives of the Royal Botanic Gardens, Kew, along with botanical illustrations and archival images depicting magic and mayhem, The Witch's Garden beautifully evokes the bewitching nature of mysterious plants.

Stone Age Economics is a classic of economic anthropology, ambitiously tackling the nature of economic life and how to study it comparatively. This collection of six influential essays is one of Marshall Sahlins' most important and enduring works, claiming that stone age economies formed the original affluent society. The book examines notions of production, distribution and exchange in early communities and examines the link between economics and cultural and social factors. This edition includes a new foreword by the author.

All organizations, institutions, business processes, markets and strategies have one aim in common: the reduction of transaction costs. This aim is pursued relentlessly in practice, and has been perceived to bring about drastic changes, especially in the recent global market and the cyber economy. This book analyzes and describes “transactions” as a model, on the basis of which organizations, institutions and business processes can be appropriately shaped. It tracks transaction costs to enable a scientific approach instead of a widely used “state-of-the-art” approach, working to bridge the gap between theory and practice. This open access book analyzes and describes “transactions” as a model...

Bible Studies for Life: Preteens Leader Guide - CSB - Winter 2022

Willing's Press Guide

*Lawrence Lessig, “the most important thinker on intellectual property in the Internet era”, masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers– that–be been able to exert such control over what we can and can’t do with the culture around us. Our society defends free markets and free speech; why then does it permit such top–down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.*

*The South Asian subcontinent is home to nearly a billion people and has been the site of fierce historical contestation. It is a panoply of languages and religions with a rich and complex history and culture. Drawing on the newest and most sophisticated historical research and scholarship in the field, Modern South Asia is written in an accessible style for all those with an intellectual curiosity about the region. After sketching the pre–modern history of the subcontinent, the book concentrates on the last three centuries from c.1700 to the present. Jointly written by two leading Indian and Pakistani historians, it offers a rare depth of historical understanding of the politics, cultures and economies that shape the lives of more than a fifth of humanity. In this comprehensive study, the authors debate and challenge the striking developments in contemporary South Asian history and historical writing. The book provides new insights into the structure and ideology of the British raj, the meaning of subaltern resistance, the refashioning of social relations along lines of caste, class, community and gender, the different strands of anti–colonial nationalism and the dynamics of decolonization. This book is a work of synthesis and interpretation covering the entire spectrum of modern South Asian history – social, economic and political. The authors offer an understanding of this startegically and economically vital part of the world.*

*Satellite Earth observation (EO) data have already exceeded the petabyte scale and are increasingly freely and openly available from different data providers. This poses a number of issues in terms of volume (e.g., data volumes have increased 10× in the last 5 years); velocity (e.g., Sentinel-2 is capturing a new image of any given place every 5 days); and variety (e.g., different types of sensors, spatial/spectral resolutions). Traditional approaches to the acquisition, management, distribution, and analysis of EO data have limitations (e.g., data size, heterogeneity, and complexity) that impede their true information potential to be realized. Addressing these big data challenges requires a change of paradigm and a move away from local processing and data distribution methods to lower the barriers caused by data size and related complications in data management. To tackle these issues, EO data cubes (EODC) are a new paradigm revolutionizing the way users can store, organize, manage, and analyze EO data. This Special Issue is consequently aiming to cover the most recent advances in EODC developments and implementations to broaden the use of EO data to larger communities of users, support decision-makers with timely and actionable information converted into meaningful geophysical variables, and ultimately unlock the information power of EO data.*
