Based on the CNE® examination blueprint, **Certified Nurse Educator Review Book: The Official NLN Guide to the CNE® Exam, Second Edition** delivers a comprehensive review to prepare you to take the Certified Nurse Educator examination. Each chapter provides an overview of the content included on the exam blueprint and practice test items, complete with rationales for correct and incorrect answers, reflecting the types of items you will encounter on the exam. This revised edition streamlines and enhances your exam preparation with updated content, additional bulleted lists and tables, additional practice questions, and example scenarios that demonstrate the practical application of chapter concepts. Failure of the NCLEX-RN is a significant problem with a farther reaching impact than just the individual student and program of nursing. Every student who is unsuccessful on the exam is one less registered nurse to provide patient care; therefore, increasing NCLEX-RN pass rates is essential to addressing the ongoing nursing shortage. The purpose of this study was to determine the relationship among nursing curriculum grade point average, performance in the biological science courses, performance in the theory portion of fundamentals and medical-surgical nursing courses, performance on the Assessment Technologies Institute RN comprehensive predictor examination, and role transition setting and success on the NCLEX-RN examination. Approval was obtained from the governing institution and community college's internal review board, to conduct a record review of the graduating nursing classes. Logistical regression was then performed to identify significant predictors of NCLEX success, including ACT and COMPASS reading scores, biological science GPA, performance in medical-surgical nursing courses, and ATI comprehensive predictor performance. Statistical analysis indicated that ACT/COMPASS reading scores, nursing curriculum and biological science GPA, and ATI comprehensive predictor performance were significant predictors of NCLEX-RN performance.

One of sociology's most important missions is giving voice to those whose experiences are typically otherwise blunted, marginalized, or simply ignored. Featuring memorable, first-person accounts of mentally ill individuals, *Voices from the Inside: Readings on the Experiences of Mental Illness* allows students to connect directly with real-life "experts" who know mental illness all too intimately. This unique anthology addresses a variety of central topics surrounding mental illness, including suicide, hospitalization, the meanings of medication, the experiences of caregivers, and the stigma attached to mental illness. Each section of readings opens with a "sensitizing" introduction that outlines key questions, specific matters for student consideration, and ways in which social scientists approach relevant substantive issues. The thought-provoking discussion questions following each set of readings are designed to foster vibrant class discussion. Comprehensive enough to be used throughout a course--but brief enough to be combined with other supplementary materials or a full-scale textbook--*Voices from the Inside* is ideal for upper-level undergraduate or graduate courses on the sociology of mental health and illness. It can also be used in courses in medical sociology, social work and mental health, nursing and mental health, and abnormal psychology.

NCLEX Test Practice Questions & Exam Review for the National Council Licensure Examination for Registered Nurses
Note Taking That Works!

Nurse education programs are implementing standardized assessments without evaluating their effectiveness. Graduates of associate degree nursing programs continue to be unsuccessful with licensure examinations, despite standardized testing and stronger

admission criteria. This problem is also prevalent for LPN-to-RN education programs due to a lack of research on this group of graduates, who by all accounts should be successful in nursing education based on their work experience and prior nursing education. Findings of this quantitative, non-experimental descriptive correlational study are presented to determine the effectiveness of standardized testing from Assessment Technologies Institute (ATI) as it relates to identifying at-risk LPN-RN students enrolled in two mid-western private colleges and predicting their success on the National Council Licensure Examination for Registered Nurses (NCLEX-RN®). The sample consisted of 182 students who took the ATI registered nursing (RN) comprehensive predictor assessment between November 2009 and December 2011. Demographic data and scores on the ATI RN Fundamentals Assessment (composite, nursing process, and thinking scores) were compared with performance on the ATI comprehensive predictor and NCLEX-RN® results. Study findings indicate a statistically significant association between the standardized testing scores and pass rates on the NCLEX-RN® examination, but limited relevance of student characteristics.

Dimensions of Human Behavior: The Changing Life Course presents a current and comprehensive examination of human behavior across time using a multidimensional framework. Author Elizabeth D. Hutchison explores both the predictable and unpredictable changes that can affect human behavior through all the major developmental stages of the life course, from conception to very late adulthood. Aligned with the 2015 curriculum guidelines set forth by the Council on Social Work Education (CSWE), the Sixth Edition has been substantially updated with contemporary issues related to gender and sexuality, race and ethnicity, and social class and disability across the lifespan.

Co-teaching is an equal partnership between a special education teacher and a general education teacher. They share a classroom and responsibilities for teaching all students in the class. But what does co-teaching look like? How does it work? Are we doing it right? Finding the answers to these questions is critical to the effectiveness of a co-teaching program that is grounded in inclusive educational practices. In this book, you'll learn how co-teachers

- * Define what effective co-teaching is and what it is not;
- * Engage students in evolving groups, using multiple perspectives for meaningful learning opportunities;
- * Resolve differences in teaching and assessment practices;
- * Respond to parents and students about inclusion and co-teaching concerns; and
- * Organize and teach an equitable, inclusive classroom.

Concise and informative answers to questions posed by real teachers, administrators, and parents help you learn about the components of co-teaching. And vignettes about issues that arise in co-teaching situations will help you start conversations and solve day-to-day challenges inherent to co-teaching. Whether you're already involved in co-teaching programs or are soon to embark on the effort, *Teaching in Tandem* provides knowledge and tools that you can use to create effective partnerships and powerful learning environments for teachers and students alike. Every teacher, principal, administrator, and paraprofessional who participates in co-teaching--or who is worried about how to address inclusion--needs this book. An additional annotated resource list is available online, along with an ASCD Study Guide.

NCLEX High-Risk: The Disaster Prevention Manual for Nurses Determined to Pass the RN Licensing Examination

The purpose of this quantitative study was to determine if Assessment Technologies Institute's (ATI) comprehensive predictor accurately predicts student results on the National Council Licensure Examination for Registered Nurses (NCLEX-RN) for graduates of an Associate Degree nurse program at a community college in the Northwestern part of North Carolina. The study was also used to determine the feasibility of the School of Nursing (SON) continuing to purchase the ATI standardized testing products for student use. This study evaluated the comprehensive predictor scores and first time pass/fail rates for graduates (N=285) from 2007 to 2011. All data was analyzed using IBM Statistical Package for the Social Sciences (SPSS) version 20 software, as well as a predictive accuracy spreadsheet provided by ATI to determine the overall predictive reliability. The mean on the predictor is significantly different for those who passed versus those who failed, which indicated that ATI's comprehensive predictor is predictive of success or failure on the NCLEX-RN for graduates of the Associate Degree Nurse program at the college ($p = 0.000$)

The most comprehensive prep package for the NCLEX-PN Licensed practical nurses (LPNs) are increasingly in demand at hospitals, nursing homes, offices, and clinics. Today, more than 700,000 LPNs work in the U.S., and job growth is expected to explode in years to come.

The Extraordinary Story of a Boy's Journey to a Family of His Own

Psychological Criminology addresses the question: what is it about individuals and their experiences that cause them to commit crime and/or to become criminal? This book provides a comprehensive coverage of psychological theories of crime and criminality, exploring theories focusing on factors present at birth (human nature, heredity); theories that focus on factors that influence the offender over the lifespan (learning, development); and theories focusing on factors present at the crime scene. It emphasizes the connections among the different approaches, and demonstrates how, taken together rather than as rival explanations, they provide a more complete picture of crime and criminality than each provides individually. Theories are arranged throughout the book in a temporal sequence, from distal to proximal causes of crime. The analysis spans 100,000 years, from the evolutionary roots of criminal behaviour in the ancestral environments of early humans on the African savana, to the decision to engage in a specific criminal act. Key features of the book include: a focus on theory - 'explaining' crime and criminality, an integrative approach, accessible to readers who do not have a background in psychology. Psychological Criminology highlights the contributions that psychological theory can make to the broader field of criminology; it will be of interest to students, academics, researchers and practitioners in both criminology and forensic psychology.

The remarkable story of a couple who risked everything to open their home--and their hearts--to answer an abandoned child's wish. It was a small note buried in the file of a deeply troubled eleven-year-old boy--a plea for a normal life Rich and Sue Minter couldn't ignore: The Things I Want MOST: A family A fishing pole A familyThe Miniter's heard in that simple note the voice of a frightened child who wanted what all children want and need: someone to love who would love them in return. So they brought Mike home to the cozy country inn they'd restored and managed in rural upstate New York. There, over the next year, they would try to make Mike's dream come true. But first they would have to work through the fear, anger, and distrust that accompanied this boy who had lived his whole life with the label "severely emotionally disturbed." For the biggest obstacle to Mike's happiness was Mike himself, who gave the Miniter's every reason to give up but one--the power of love. When Richard and Sue Minter decided to open their home--and their hearts--to a foster child, they couldn't imagine the frustrations and joys, the breakthroughs and setbacks, not to mention the emotional toll, that awaited them. Here is the remarkable true story of how their lives changed forever with their decision to answer an abandoned child's wish for THE THINGS I WANT MOST. -->

This must-have workbook helps students learn the prioritization and delegation skills needed to survive nursing school, pass the NCLEX-RN® examination, and make the transition to practice in today's healthcare environment. Consisting of three parts plus an answer key, this resource provides numerous opportunities for students to review cases and answer questions similar to those they will see on the NCLEX-RN examination - including questions in alternate-item formats . Part 1, written by delegation expert Ruth Hansten, is an introduction that provides a practical review of clinical delegation skills and serves as a framework for the exercises that follow. Part 2 consists cases of patients who have relatively straightforward health problems followed by NCLEX examination-style questions focusing on prioritization, delegation, and assignment. Part 3 consists of complex, unfolding cases involving patients who have multiple health conditions, as well as complex patient assignments. An introduction by prioritization and delegation expert Ruth Hansten explains the importance of developing sound clinical skills and judgment in the areas of prioritization, delegation, and assignment. NCLEX-style questions help students develop fundamental skills in prioritization, delegation, and assignment and become familiar with the NCLEX examination format. Questions in Parts 2 and 3 are organized by body system and by complexity, respectively, to allow for easy use with any medical-surgical nursing text. Both sections of exercises give students essential hands-on practice in prioritizing (deciding what to do first), delegating (giving specific tasks to assistive personnel and supervising satisfactory completion of those tasks), and assignment (giving responsibility for the overall care of particular patients to appropriate personnel). The questions in Part 3 are more complex than those in Part 2, allowing students to master core concepts using unambiguous cases before applying this knowledge to patients with more complicated, multidimensional case presentations. Flexible organization allows the workbook to be used with any Elsevier medical-surgical nursing text. The answer key provides rationales for correct as well as incorrect answers, reinforcing the concepts presented in each unit. Questions follow NCLEX style, and about 10% represent the new alternate-item question format. The workbook is three-hole punched and perforated for convenience.
