standard is relevant for which type of machine. Safety with Machinery provides a basic grounding in machinery safety and covers safeguarding philosophy and strategy, typical hazards, risk assessment and reduction, guarding techniques, ergonomic considerations, safe use of equipment and plant layout. All types of safeguards are discussed - mechanical, interlocking, electrical / electronic / programmable, hydraulic, pneumatic. The new edition has been updated throughout in line with changes in regulations and standards. The section on

electric, electronic and programmable safety systems has been expanded to reflect their increasing importance. The book now focuses on the harmonised standards (e.g. EN ISO 13849, IEC/EN 61131-2) which can be used by manufacturers to self-certify their machines for the European market without the need for third party examination, but also covers other relevant standards (e.g. IEC 62061). Many practical examples set the regulations in context and assist in the interpretation of the various standards. Safety with Machinery is essential reading

for all engineers involved in machinery design and maintenance all over the world as every machine sold within or into the EU needs to conform to the harmonised standards. It also provides health and safety professionals, students and employee representatives, as well as certification bodies, health and safety inspectors and safety regulators with a comprehensive overview of machinery safety.

*A wide-ranging review of
the issues and

transfer of technology
between advanced
industrial countries and
the countries of the

major theme is the complex

aspects of the process,
together with the related*

human factors and leadership requirements. The book presents a very open exchange of views on the difficult obstacles that the countries of the Former Soviet Union need to overcome and the market economy countries of the west need to understand. Issues of patents, intellectual property, personnel training, reorganization of formerly centralized economies, incentives, information exchange, and possible models for effective transfer are highlighted, together with specific

examples and discussions of the most up-to-date knowledge about technology transfer. Audience: All individuals and organizations concerned with the transfer of technology, particularly those interested in a candid appraisal of the issues and opportunities for the transfer of technology and industrial and scientific cooperation between industrialized market economies and the countries of Eastern Europe and Central Asia.
