'I promised that I would one day write a book and tell the world about the home for unmarried mothers. I have at last kept my promise.' In Ireland, 1951, the young June Goulding took up a position as midwife in a home for unmarried mothers run by the Sacred Heart nuns. What she witnessed there was to haunt her for the next fifty years. It was a place of secrets, lies and cruelty. A place where women picked grass by hand and tarred roads whilst heavily pregnant. Where they were denied any contact with the outside world; denied basic medical treatment and abused for their 'sins'; where, after the birth, they were forced into hard labour in the convent for three years. But worst of all was that the young women were expected to raise their babies during these three years so that they could then be sold - given up for adoption in exchange for a donation to the nuns. Shocked by the nuns' inhumane treatment of the frightened young women, June risked her job to bring some light into their dark lives. June's memoir tells the story of twelve women's experiences in this home and of the hardships they endured, but also the kindness she offered them, and the hope she was able to bring.

This book describes current, evidence-based guidelines for damage control interventions across the field of trauma care with the aim of enabling clinicians to apply them to best effect in daily clinical practice. Emphasis is placed on the need for trauma surgeons and their teams to recognize that optimal damage control in severely traumatized patients depends upon the combination of immediate assessment, resuscitation, and correct surgical management. The book opens by examining the evolution of damage control and the very significant impact that military damage control interventions have had on civilian emergency health care through improvements as simple as bandaging and tourniquets. Damage control measures in different specialties, including neurosurgery, orthopedics, vascular surgery, cardiothoracic surgery, anesthesia, and critical care, are then covered in detail.

Readers will also find helpful information on a range of other important topics, such as the role of pre-hospital care providers, damage control within the emergency department, adjuncts of damage control, and damage control in austere environments. This book is a 'must read' for all clinicians in the trauma field.

Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities

How can we meet the special needs of children for emergency medical services (EMS) when today's EMS systems are often unprepared for the challenge? This comprehensive overview of EMS for children (EMS-C) provides an answer by presenting a vision for tomorrow's EMS-C system and practical recommendations for attaining it. Drawing on many studies and examples, the volume explores why emergency care for children—from infants through adolescents—must differ from that for adults and describes what seriously ill or injured children generally experience in today's EMS systems. The book points the way to integrating EMS-C into current emergency programs and into broader aspects of health care for children. It gives recommendations for ensuring access to emergency care through the 9-1-1 system; training health professionals, from paramedics to physicians; educating the public; providing proper equipment, protocols, and referral systems; improving communications among EMS-C providers; enhancing data resources and expanding research efforts; and stimulating and supporting leadership in EMS-C at the federal and state levels. For those already deeply involved in EMS efforts, this volume is a convenient, up-to-date, and comprehensive source of information and ideas. More importantly, for anyone interested in improving the emergency services available to children—emergency care professionals from emergency medical technicians to nurses to physicians, hospital and EMS administrators, public officials, health educators, children's advocacy groups, concerned parents and other responsible adults—this timely volume provides a realistic plan for action to link EMS-C system components into a workable structure that will better serve all of the nation's children.
