Volume II - Verification and Compliance

***This second Volume in the book Series on Nuclear Non-Proliferation in International Law discusses the legal interpretation and implementation of verification and compliance with the Treaty of the Non-Proliferation of Nuclear Weapons, 1968; the Comprehensive Nuclear Test-Ban Treaty, 1996; and the Treaty establishing the European Atomic Energy Community (EURATOM), 1957. It specifically examines the question, contested in recent academic writings, whether the International Atomic Energy Agency (IAEA) is competent to verify not only the correctness, but also the completeness of national declarations. Topical legal issues of verification and its technical and political limits as well as peaceful settlement of disputes and countermeasures are discussed in-depth. The Series on Nuclear Non-Proliferation in International Law provides scholarly research articles with critical commentaries on relevant treaty law, best practice and legal developments, thus offering an academic analysis and information on practical legal and diplomatic developments both globally and regionally. It sets a basis for a further constructive discourse on the topic at both national and international levels. A Third Volume, to be published in Autumn 2016, will focus on legal issues of safety and security of the use of nuclear energy for peaceful purposes. Jonathan L. Black-Branch is Professor of International Law, Royal Holloway University of London; a Member of Wolfson College, Oxford; Chairman of the International Law Association (ILA) Committee on Nuclear Weapons, Non-Proliferation and Contemporary International Law. Dieter Fleck is Former Director International Agreements & Policy, Federal Ministry of Defence, Germany; Member of the Advisory Board of the Amsterdam Center for International Law (ACIL); Honorary President, International Society for Military Law and the Law of War; Rapporteur of the ILA Committee on Nuclear Weapons, Non-Proliferation and Contemporary International Law.***

Endorsed by the International Association for the Advancement of Space Safety (IAASS) and drawing on the expertise of the world's leading experts in the field, Safety Design for Space Operations provides the practical how-to guidance and knowledge base needed to facilitate effective launch-site and operations safety in line with current regulations. With information on space operations safety design currently disparate and difficult to find in one place, this unique reference brings together essential material on: Best design practices relating to space operations, such as the design of spaceport facilities. Advanced analysis methods, such as those used to calculate launch and re-entry debris fall-out risk. Implementation of safe operation procedures, such as on-orbit space traffic management. Safety considerations relating to the general public and the environment in addition to personnel and asset protection. Taking in launch operations safety relating unmanned missions, such as the launch of probes and commercial satellites, as well as manned missions, Safety Design for Space Operations provides a comprehensive reference for engineers and technical managers within aerospace and high technology companies, space agencies, spaceport operators, satellite operators and consulting firms. Fully endorsed by the International Association for the Advancement of Space Safety (IAASS), with contributions from leading experts at NASA, the European Space Agency (EASA) and the US Federal Aviation Administration (FAA), amongst others Covers all aspects of space operations relating to safety of the general public, as well as the protection of valuable assets and the environment Focuses on launch operations safety relating to manned and unmanned missions, such as the launch of probes and commercial satellites
